Original instruction manual!

# Contents

# 1. Introduction

## 1.1    Documentation

### 1.1.1    Target groups

This instruction manual provides information to the installation, operating and maintenance personnel required for the operation and maintenance of the 700 P electronics module (module type E01).

All persons working with the 700 P electronics module must have read and understood the instruction manual, in particular, the safety instructions it contains.

### 1.1.2    Documentation Structure

This instruction manual is intended for operators of the 700 P electronics module. It contains important information for safe, trouble-free, and efficient operation of the 700 P electronics module. Observing these instructions will help prevent risks, reduce repair costs and downtimes, and increases the reliability and service life of the 700 P electronics module.

Chapters Installation, Commissioning, and Maintenance are intended only for trained and authorized service personnel. These chapters contain important information on the assembly, configuration, commissioning and start-up, maintenance and repair of the 700 P electronics module that should only be performed by this target group.

Please consult the table of contents and the index to quickly find the information you require.

## 1.2    Conventions

*Please note*

The instruction manual contains notes with different priorities that are marked with symbols.

| Pictogram | Please note | Meaning |
|---|---|---|
| ⚠ | *Danger!* | Immediate danger to life and limb! If the situation is not corrected, death or serious injury will result. |
| ⚠ | *Warning!* | Danger to life and limb! If the situation is not corrected, death or serious injury can result. |
| ⚠ | *Attention!* | If this note is not observed, moderate or minor injury or damage to material can result. |
| ⚡ | *Warning!* | Electrocution hazard. |
| ❗ | *Please note* | These notes indicate a material risk or provide useful information to make working with the device easier. |
| ♺ | *Attention!* | Environmental hazard! Do not throw away or burn the batteries! Batteries must be disposed of at a collection point. |

# 2. Safety

## 2.1    Intended use

The 700 P electronics module (module type E01) in conjunction with the DEPOLOX® Pool E (module type D01) or DEPOLOX® 5 E flow cell (module type D01) and the integrated sensors is designed for measuring and controlling tasks during the treatment of swimming and bathing pool water.

The operational safety of the 700 P electronics module is only guaranteed if it is used in accordance with its intended application. It may only be used for the purpose defined in the order and under the installation, operating and ambient conditions specified in this instruction manual.

All inspection and maintenance work must be carried out in accordance at the specified intervals.

Compliance with the intended use also includes reading this instruction manual and observing all the instructions it contains.

The operator bears full and sole responsibility if this unit is put to any use which does not comply strictly and exclusively with this intended use.

⚠️   *Danger!*

**Risk of injury or death!**

The device must not be used with flammable liquids.

## 2.2    General safety instructions

The manufacturer places great value upon safety when working with the unit. This was already taken into account in the design of the system, by the integration of safety features.

*Safety regulations*   The safety instructions in this documentation must be observed. Additional industry-wide or in-house safety regulations also continue to apply.

| | |
|---|---|
| *Safety warnings on the unit* | All safety instructions attached to the unit itself must be observed. These instructions must always be clearly legible and complete. |
| *State-of-the-art technology* | The unit has been constructed in accordance with state-of-the-art technology and the accepted safety regulations. However, if the unit is used by persons who have not been adequately instructed, risks to life and limb of such persons or third parties and damage to the unit itself or to other property cannot be ruled out. Work not described in this instruction manual must be performed only by authorized personnel. |
| *Personnel* | The operator of the overall system must ensure that only authorized and qualified specialized personnel are permitted to work with and on the unit within their defined scope of authority. "Authorized, specialized personnel" refers to trained technicians employed by the operator, the manufacturer, or, if applicable, the service partner. Only qualified electricians must perform work on electrical components. |
| *Spare parts / components* | Trouble-free operation of the unit is only guaranteed if original spare parts and components are used in precisely the combination described in this instruction manual. Failure to observe this instruction may incur the risk of malfunction or damage to the unit. |
| *Extensions and conversions* | Never attempt to perform any modifications, extensions or conversions on the unit that could have an adverse affect on safety without the written approval of the manufacturer. |
| *Electrical power* | Only qualified electricians or trained personnel supervised by a qualified electrician are permitted to perform any work on electrical components in accordance with valid electro-technical regulations.

During normal operation, the controller must remain closed. Connect the power cables in accordance with the wiring diagram. |

*Danger!*

**Risk of injury or death!**

External voltages may be connected even with the operating voltage switched off. In the event of a fault in the electrical power supply, switch the device off immediately!

| | |
|---|---|
| *IT security* | The manufacturer offers IT security mechanisms for its products to support secure system operation. We recommend checking on a regular basis to see what information is available regarding IT security developments for your products. Information on this can be found on the Internet. |

For the safe operation of an installation, it is furthermore necessary to integrate the automation components into a holistic IT security concept which comprises the entire system and is in accordance with latest state of the art technology. In the process, implemented products deriving from other manufacturers should be taken into account.

Upon start-up of the 700 P electronics module, it should be ensured that the factory-configured passwords and user names are replaced with individual ones.

*Disposal*     Ensure safe and environment-friendly disposal of agents as well as replacement parts.

*Attention!*

**Environmental hazard!**

Dispose of the electronics waste in accordance with valid local and national regulations.

## 2.3     **Specific operating phases**

*Normal operation*     Never employ any working methods which could affect safety!

The device must not be used with flammable liquids.

Only run the 700 P electronics module when the housing is closed!

Inspect the 700 P electronics module at least once daily for externally visible damage and faults! Inform the responsible person/authority immediately of any detected changes (including any changes in the operating performance)!

In the event of malfunctions, switch the 700 P electronics module off immediately! Have malfunctions remedied immediately!

*Installation and maintenance work*     Secure the 700 P electronics module against activation during installation and maintenance work!

If stipulated, disconnect all parts of the 700 P electronics module from the power supply before performing any inspection, maintenance or repair work. Then first test the disconnected components to ensure they do not carry any voltage.

Do not use aggressive cleaning agents (e.g., alcohol, abrasive cleaners)! We recommend a damp cloth moistened with a commercially available neutral detergent.

## 2.4      Warranty conditions

The following must be observed for compliance with warranty conditions:

- Installation and commissioning by manufacturer or trained and authorized specialized personnel, e.g. of contracted companies
- Intended use
- Observation of the operational parameters and settings.
- The unit may only be operated by trained personnel.
- An operating log book must be kept (only in the public sector).
- Only approved calibration chemicals may be used
- The unit must not be exposed to frost.
- Maintenance work must be executed
- Use of genuine spare parts

If any of the above conditions are not met, the warranty is void.

## 2.5      Disclaimer

We are not liable for any damages incurred during installation or use of these hardware and software components. This applies specifically to trouble-free interaction with the software and hardware components you choose.

We are not liable for buyer damages (in particular, lost profits, lost information and service interruptions), which arise when using the 700 P electronics module, nor for other damages. You are solely responsible for the installation!

The contents of the instruction manual has been checked to make sure that it matches the detailed hardware and software. Deviations can nevertheless not be ruled out and we therefore assume no liability for full conformity. The details in this instruction manual are checked regularly and any necessary corrections are included in subsequent issues.

# 3. Description

## 3.1    General

The 700 P electronics module (module type E01) is part of the Pool Management System DEPOLOX® Pool E 700 P or DEPOLOX® 5 E 700 P.

The 700 P electronics module (module type E01) in conjunction with the DEPOLOX® Pool E (module type D01) or DEPOLOX® 5 E (module type D01) flow cell and the integrated sensors, measures and controls the hygiene assistance parameters free chlorine, pH value, ORP voltage, combined chlorine, total chlorine, conductivity, and temperature.

A                                                                    B

Image 1    Pool management system DEPOLOX® Pool E 700 P with sensors

*A    DEPOLOX® Pool E flow cell pressurized with sensors*
*B    700 P electronics module*

The integrated process control provides a complete pool management with the following functions:

- Dosing of disinfectants either conventionally or CEDOX-controlled
- Adaptation to the volume flow (ECO mode)
- Correction of the pH value
- Control of the powder activated carbon system or UV system
- Addition and calculation of flocculants (controlled by circulation and the pH value)
- Control of the conductivity in brine applications
- Limit value monitoring
- Data transfer to superordinate systems
- Time-controlled, controlled peak chlorine function
- Display of dosing quantity, e.g. for gas systems

## 3.2 Versions

The 700 P electronics module (module type E01) is configured in the factory according to the customer's specific requirements, with the DEPOLOX® Pool E flow cell (module type D01) or DEPOLOX® 5 E flow cell (module type D01) according to the variant code. The scope of delivery differs in the versions of the flow cell, the sensors, electronics components and accessories. The variant code consists of 12 digits and is printed on both the type plate and packaging sticker.

*Example*  | C | P | M | N | L | 4 | R | L | B | DE | O | O |

Selection of sensor measuring module for free chlorine
| C | Sensor measuring module DEPOLOX® Pool E |
| 5 | Sensor measuring module DEPOLOX® 5 E |

Selection of sensor measuring module for pH value
| P | Sensor measuring module pH value |
| O | No sensor measuring module pH value |

Selection of sensor measuring module for ORP voltage
| M | Sensor measuring module ORP voltage |
| O | No sensor measuring module ORP voltage |

Selection of sensor measuring module for total chlorine
| N | Sensor measuring module total chlorine TC |
| O | No sensor measuring module total chlorine |

Selection of sensor measuring module for conductivity
| L | Sensor measuring module conductivity |
| O | No sensor measuring module conductivity |

Selection of analog output
| 4 | 4-way mA analog output |
| O | No mA analog output |

Selection of relay board
| R | Additional relay board 4-way |
| O | No additional relay board |

Selection of DEPOLOX® Pool E / DEPOLOX® 5 E flow cell
| L | Non-pressurized flow cell |
| F | Pressurized flow cell |

Selection of LED lighting
| B | LED glow stick for flow cell |

Selection of language for instruction manual
| DE | Instruction manual in German |
| EN | Instruction manual in English |
| FR | Instruction manual in French |
| D2 | Instruction manual in German/English |

Not used
Not used

## 3.3    Design

The 700 P electronics module (module type E01) essentially consists of:

- Plastic housing with removable housing cover
- Motherboard with power supply, terminal strips, electronics components and relays
- Operating and display panel (HMI)
- Cable glands
- CAN connection

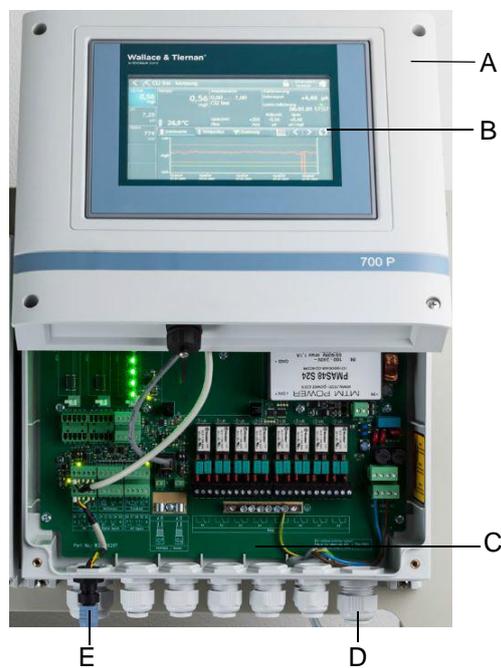

Image 2   700 P electronics module with open cover

*A   Plastic housing*
*B   Control and display unit*
*C   Motherboard*
*D   Cable glands*
*E   CAN connection*

## 3.4    Functions

The 700 P electronics module together with the flow cell and the sensors, is used to measure and control the hygiene assistance parameters in swimming pool applications.

Typical examples of applications:

- Measurement and control of chlorine and pH in the swimming pool
- Actuation of chlorine gas metering systems or dosing pumps
- Monitoring and raising of alarm if limit values exceeded
- Data visualization
- Data transfer to superordinate systems

Potential process measurements include:

- Free chlorine/pH compensated chlorine measurement
- pH
- ORP voltage
- Total chlorine/combined chlorine
- Conductivity
- Temperature
- Actuator feedback

The color touch display shows the following:

- Measurement values
- Operation mode and switching states
- Display of limit values
- Setpoint and measurement range
- Customer-specific measuring point designation
- Messages and errors
- Date/Time
- Trending

The menus are used by means of direct entry on the display or by touching the display. A trend screen displays past measurements for all sensors.

To connect to visualization systems, 4 mA outputs (optional), an RS485 interface and an Ethernet interface are available.

### 3.4.1    Controller Outputs

The 700 P electronics module supports the following controller outputs:

| Controller for | Type | Parameter designation | Action |
|---|---|---|---|
| Positioner with feedback | 3-Point | Positioner with Ym | Dosing $Cl_2$ |
| Positioner without feedback | 3-Point | Positioner without Ym | Dosing $Cl_2$ <br> Correction pH ↑ |
| Motor dosing pump (pulse duration controller | 2-Point | Dosing pump 2P | Dosing $Cl_2$ <br> Correction pH ↓ or pH↑ <br> Corr. conductivity ↑ <br> Combined $Cl_2$ ↑ or ↓ |
| 2 motor dosing pumps (pulse duration controller | 3-Point | Dosing pump 3P | Correction pH ↓ or pH↑ |
| Pulse pump (pulse-frequency controller | 2-Point | Solenoid pump 2P | Dosing $Cl_2$ <br> Correction pH↓ or pH↑ <br> Corr. conductivity↑ <br> Combined $Cl_2$ ↑ or ↓ |
| 2 solenoid pumps (pulse-frequency controller) | 3-Point | Solenoid pump 3P | Correction pH ↓ or pH ↑ |
| Dosing pump with mA input | 2-Point | Analog output 2P | Dosing $Cl_2$ <br> Correction pH ↓ or pH ↑ <br> Corr. conductivity↑ <br> Combined $Cl_2$ ↑ or ↓ |
| 2 dosing pumps with mA input | 3-Point | Analog output 3P | Correction pH ↓ or pH ↑ |
| Powder activated carbon system/UV system, release of control input | 2-Point | Dosing contact | Combined $Cl_2$↓ <br> pH ↑ or pH ↓ <br> Dosing $Cl_2$ <br> Corr. conductivity ↑ |
| Control of a flocculant dosing | | | |

*Positioner (with and without feedback)*

With the selection of the integrated controller for "positioner", for example, it is possible to use chlorine overfeed control in connection with a positioner as an actuator of a chlorine gas dosing system.

*2-point pulse duration controller for dosing pumps*

The dosing pump is switched on for the calculated time within an adjustable cycle period Tp (relay contact). The cycle period is mainly determined by the reaction time of the connected system and entered as the cycle period Tp. Example:

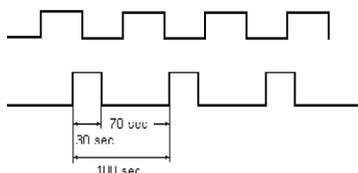

| Cycle period Tp | = | 100 s |
|---|---|---|
| Output value Yout | = | 30 % |
| => Duty cycle | | 30 s |

| Off-duty cycle | | 70 s |
|---|---|---|

*2-point pulse frequency controller for pulse pumps*

Pulse pumps are controlled with 0 to 100/120/140/160/180 pulses per minute, depending on the specification of the connected pump.

The duty cycle during each dosing is 0.3 s. The break time is calculated to be between 0.2 and 60 s, depending on the dosing rate.

Example of a pulse pump at 120 pulses/min:

| Yout in % | 100... | 84... | 72... | 56 | 50... | 33... | 25... | 10... | 5... | 1 | 0 |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Pulses/min | 120... | 96... | 85... | 75 | 60... | 40... | 30... | 12... | 6... | 1 | 0 |

*3-point pulse duration controller for dosing pump and 3-point pulse frequency controller for Pulse pump*

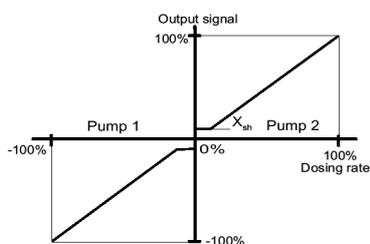

Pump 1 decreases the control value,
Pump 2 increases the control value.

The control range is between -100 % (Pump 1) and +100 % (Pump 2); this range can also be set in manual mode.

If the setpoint = actual value, no pump is activated (neutral zone $X_{sh}$).

Output signals as for 2 point pulse-duration controller and 2-point pulse-frequency controller.

*Controller with mA output*

The 700 P electronics module has a maximum of four analog mA outputs. These can be assigned individually as registration or controller outputs or as controller output when selecting "Analog output 2P" or "Analog output 3P" it is necessary to assign the desired mA output 1 to 4.

*Analog output controller 2-point*

With a control output of 0%, the output current is 0 or 4 mA; with a higher control output, the output current reaches up to 20 mA. Pumps with current input, thyristor control units with DC or AC pumps, or analog control valves can be used as actuators.

*Analog output controller 3-point*

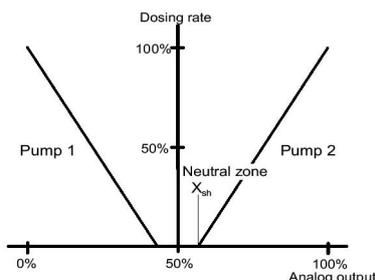

Pump 1 decreases the control value,
Pump 2 increases the control value.

Output behaviour is similar to "Analog output controller (2-point)", but with 50 % offset. This means that with a control deviation of 0 % (setpoint = actual value) a current of 10 mA or 12 mA is output (pump is idle).

| Setting | Signal | Pump | Signal | Pump |
|---|---|---|---|---|
| 0 to 20 mA | 0 to 10 mA | Pump 1 | 10 to 20 mA | Pump 2 |
| 4 to 20 mA | 4 to 12 mA | Pump 1 | 12 to 20 mA | Pump 2 |

Therefore, two suitable pumps can be actuated with one mA current loop.

*Dosing contact*    A dosing contact is used to actuate electrolysis systems for chlorine dosing or to reduce the combined chlorine in the water with powder activated carbon dosing systems or UV systems. A special controller is required to drive these systems in order to prevent frequent switching on or off (on account of flushing times on powder activated carbon systems, cooling phases on UV systems).

The contact is enabled or disabled within the set control parameters.

If the Cl-N value entered is exceeded (e.g. 0.20 mg/l), the controller output switches on for at least the minimum duty cycle. As long as the Cl-N value is exceeded, the controller output remains on. When the Cl-N value is not reached, the controller output switches off immediately (provided that the minimum duty cycle has elapsed).
Renewed activation when the setpoint is exceeded is only possible when the minimum off-duty cycle has elapsed.

*Please note*

In manual mode the minimum duty cycle and the minimum off-duty cycle are ignored!
For dosing contact, there is no monitoring of the max. dosing time.

*Controller STOP function*    When the controller STOP function is active, all controller outputs are switched off (positioner closed, dosing pump off, pulse pumps off, analog output controller 0%, enabling contact off, dosing contact off).
The flocculation output is also switched off.

The DIN function remains active as long as the DIN limit values are kept.

Controller STOP is triggered by the digital inputs, e.g. by sample water STOP or circulation off.

### 3.4.2    Control parameters

Control parameters are setting values used to determine the control response of a controller. Different parameters apply depending on the type of controller.

*Please note*

The control parameters are listed alphabetically.

*Pulses max./min*

| Maximum number of pulses | |
|---|---|
| Description | The max. pulses/min parameter only applies to pulse pumps. This parameter is used to set the maximum number of pulses per minute in accordance with the pump used. |
| Setting range | The max. pulses/min parameter can be set to 100/120/140/160/180 pulses. |

*Setpoint*

| Setpoint | |
|---|---|
| Description | Specified value at which the control value (chlorine, pH, total chlorine, conductivity) can be maintained by the controller. |
| Setting range | The setting range corresponds to the respective measuring range. |

*Tn*

| Integral action time (I-element) | |
|---|---|
| Unit | Minutes (min) |
| Description | On the basis of the integral action time Tn, the dosing rate changes constantly until the setpoint is reached. The higher the value of Tn, the longer it takes until the controller increases the dosing rate. Tn higher: Control response is slower Tn lower: Control response is faster |
| Setting range | The parameter Tn can be set from 0 to 100 min (Tn = 0 means that the "I-element" is deactivated, i.e. a pure P-control response applies). It may not be possible to reach the setpoint value. |

*Tp*

| Cycle period | |
|---|---|
| Unit | Seconds (s) |
| Description | The parameter Tp only applies to dosing pumps.<br>The cycle period Tp defines a switching period, which must be coordinated with the respective pump type. |
| Setting range | The parameter Tp can be set between 10 and 180 s. |

Example:
Fast dosing pumps can be actuated by a low Tp, slow dosing pumps can be actuated by a high Tp.

The control parameter Tp must always be adjusted to suit the dosing pump used:

| Dosing pump | up to 20 strokes/min | 20 to 40 strokes/min | 40 to 80 strokes/min | 80 to 125 strokes/min | 125 to 200 strokes/min |
|---|---|---|---|---|---|
| Tp value | 120 | 100 | 60 | 30 | 15 |

*Please note*

If the Ts and Tu values are modified manually, the control parameters Xp and Tn are re-calculated.

*Ts*

| Loop rise time | |
|---|---|
| Unit | Minutes (min) |
| Description | Time required to reach the end value of the measuring range with 100% dosing rate. This time is defined automatically by the system for the automatic adaption, but it can also be entered manually. |
| Setting range | The parameter Ts can be set between 1.0 and 480.0 min. |

*Tu*

| Loop dead time | |
|---|---|
| Unit | Minutes (min) |
| Description | Time required between start of dosing and clear recognition of the reaction. This time is defined automatically by the system for the automatic adaption, but it can also be entered manually. |
| Setting range | The parameter Tu can be set between 1.0 and 60 min. |

*Ty*

| Ty | Running time of the positioner |
| --- | --- |
| Unit | Seconds (s) |
| Description | The parameter Ty only applies to positioners. Ty is the time which the positioner requires to adjust from 0 % to 100 %. |
| Setting range | The parameter Ty can be set between 10 and 180 s. |

*Control direction*

| | Control direction |
| --- | --- |
| Unit | Acid / Alkali for pH<br>Raising/lowering for conductivity |
| Description | Defines which medium is used to perform the correction. |

Example:

| pH | for control direction "Acid" | Lower pH value when adding acid |
| --- | --- | --- |
| Conductivity | for control direction "Raise" | Addition of salt |

*Xp*

| | Proportional factor |
| --- | --- |
| Unit | Percentage (%) with factor |
| Description | The control amplification is determined by means of the proportional factor.<br>The lower the proportional factor Xp is selected in %, the greater the deviation from the setpoint is amplified, and the more quickly the controller attempts to control the deviation from the setpoint.<br>The control amplification factor is calculated using the following equation:<br>$\text{Factor} = (1/Xp) \times 100\ \%$ |
| Setting range | The parameter Xp can be set from 1 % (factor 100) to 1000 % (factor 0.1). |

*Xsh*

| | Neutral zone |
| --- | --- |
| Unit | Percentage (%) |
| Description | The parameter Xsh only applies to 3-point controllers.<br>There is no control output within the neutral zone. |
| Setting range | The parameter Xsh can be set from 1 to 5 % (based on the measuring range). |

*Please note*

The control range is limited by the parameters Ymax and Ymin.
Do not select a Ymax value lower than Ymin.
With Ymin > 0 overdosing can occur.

*Ymax*

| Dosing rate limitation | |
|---|---|
| Unit | Percentage (%) |
| Description | The parameter Ymax only applies to<br><br>• Positioner with feedback<br>• Dosing pumps<br>• Pulse pumps<br>• Controller with mA output<br><br>Ymax defines the maximum control output to the actuator. The control parameter corresponds to electronic dosing limitation of the actuator. |
| Setting range | The parameter Ymax can be set from 0 to 100 %. |

*Ymin*

| Dosing rate basic load | |
|---|---|
| Unit | Percentage (%) |
| Description | The parameter Ymin only applies to<br><br>• Positioner with Ym feedback<br>• Dosing pumps 2P<br>• Pulse pumps 2P<br>• Controllers with mA output<br><br>A basic dosing rate is output to the actuators via Ymin. |
| Setting range | The parameter Ymin can be set from 0 to 100 %. |

### 3.4.3    Controller modes for chlorine control

The 700 P electronics module offers two options for controlling the concentration of disinfectants:

- $Cl_2$ single feedback closed loop control
- CEDOX control

*$Cl_2$ single feedback closed loop control*

In this mode, the required $Cl_2$ value is held at the setpoint using the PI single feedback closed loop control (standard chlorine regulation).

*CEDOX control*

In this mode, the chlorine setpoint is continuously and automatically optimized using a PI single feedback closed-loop control in order to maintain a constant ORP value. For this procedure, the setpoint entered is not $Cl_2$ as normal, but the required ORP voltage is set as the setpoint. A specially developed CEDOX mode calculates the amount of free chlorine required in the water based on the demand. This internal chlorine setpoint is used to measure the required quantity of disinfectant using the PI single loop feedback controller.

The variable or optimized $Cl_2$ setpoint must remain between the "Min setpoint" and "Max setpoint" limit values.

*Please note*

DIN 19643 (DIN = German Industrial Norm) stipulates the following $Cl_2$ limit values:  Min =  0.30 mg/l and Max = 0.60 mg/l.

Requirement for CEDOX control:

- Chlorine measuring and control
- pH measuring and control
- mV measurement

*Please note*

CEDOX control only works if the pH value deviates from the pH setpoint by no more than 0.30 pH

The CEDOX control system is based on the following principle:

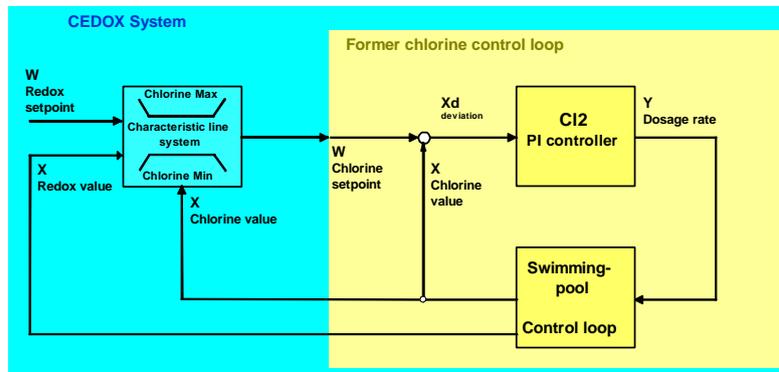

Image 3   CEDOX curve system

The example diagram below shows how the CEDOX mode works:

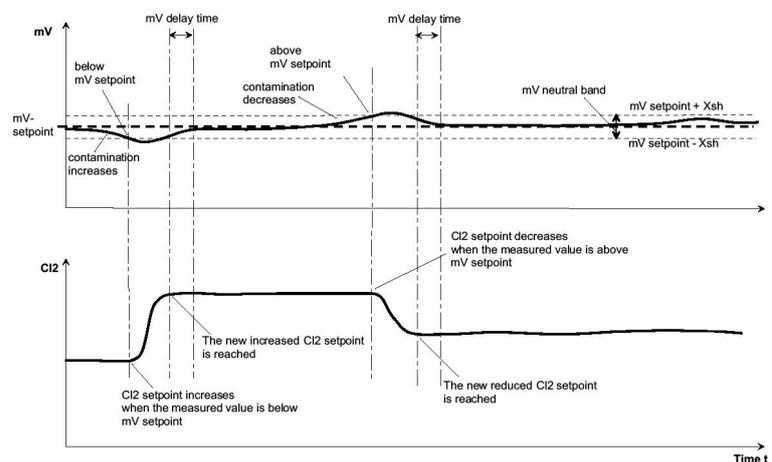

Image 4   Operating principle of the CEDOX operating mode

**Notes for settings for CEDOX control:**

In CEDOX mode, a ORP setpoint is generally set. A neutral band Xsh defines what the maximum deviation from the mV setpoint is. If the deviation is greater than Xsh, the 700 P electronics module defines a new $Cl_2$ setpoint.

The parameter "mV delay time" defines the reaction time of the ORP electrode and has a delaying effect on the setpointoptimization of the chlorine control.

The $Cl_2$ setpoint values defined by the CEDOX operating mode must remain between the limit values of the "Cl2 min. setpoint" and the "Cl2 max. setpoint." If these setpoint limits are reached, the mV measured value may vary from the mV setpoint.

**Notes for startup and calibration of CEDOX control**

After calibrating the ORP electrode, the setpoint optimization is out of service for 2 hours, as the ORP electrode does not supply reliably signals during this period. During this time, the 700 P electronics module uses a fixed temporary Cl2 setpoint. This temporary $Cl_2$ setpoint is the last current $Cl_2$ before the calibration (can be altered manually).

When the chlorine measurement is calibrated, the 700 P electronics module automatically calculates a new $Cl_2$ setpoint if deviations are detected.

The following is achieved by using CEDOX:

• Reduction of disinfectant consumption (as much chlorine as necessary but as little as possible).
• The optimum control of the $Cl_2$ setpoint based on the ORP voltage means that the lowest possible $Cl_2$ setpoint is always used and thus disinfectant saved.
• Optimizing the water quality, especially in swimming pools with heavy fluctuations in usage (e.g. outdoor pools) or with long periods of no usage.

*Please note*

CEDOX does not mean that disinfection systems can be made smaller!

### 3.4.4    Combinations of controller modes

The 700 P electronics module gives you the option of running various controller modes in combination with ECO mode.

The operator can select three different controller modes:

• $Cl_2$ single feedback
• CEDOX
• $Cl_2$ + ECO-CEDOX

*Cl$_2$ single feedback*

Normal mode:    Cl$_2$ setpoint
ECO mode:       Cl$_2$ setpoint ECO

| Cl$_2$ setpoint | |
|---|---|
| Description | In this mode, the required Cl$_2$ value is held at the setpoint using the PI single feedback closed loop control. |
| Setting range | Xp, Tn, setpoint |

| Cl$_2$ setpoint ECO | |
|---|---|
| Description | In ECO mode, the reduced Cl$_2$ value is held at the setpoint using the PI single feedback closed loop control. There is a digital input to switch the system to ECO mode.<br><br>The flocculation control system measures at a constant rate.<br><br>This ECO mode can also be used for disinfectant control in combination with reduction of the circulation. |
| Setting range | Setpoint ECO, Xp$_{ECO}$, Tn$_{ECO}$ |

*CEDOX*

Normal mode:    CEDOX
ECO mode:       CEDOX$_{ECO}$

| CEDOX | |
|---|---|
| Description | In this mode, the setpoint entered is not Cl$_2$ as normal, but the required ORP voltage is set as the setpoint. The specially developed CEDOX mode calculates the amount of free chlorine required in the water based on the demand. This internal Cl$_2$ setpoint is used to measure the required quantity of disinfectant using the PI single loop feedback controller.<br><br>The flocculation control system measures at a constant rate. |
| Setting range | ORP setpoint, Xp, Tn |

| CEDOX$_{ECO}$ | |
|---|---|
| Description | In CEDOX $_{ECO}$ mode, the mode is also controlled based on the ORP setpoint. There is a digital input to switch the system to ECO mode. The 700 P electronics module calculates the required concentration of free chlorine in the water based on load and controls this $Cl_2$ setpoint using the PI single loop feedback control.<br><br>The flocculation control system measures at a constant rate.<br><br>This ECO mode can also be used for disinfectant control in combination with reduction of the circulation. |
| Setting range | ORP setpoint ECO, $Xp_{ECO}$, $Tn_{ECO}$ |

*Cl$_2$ + ECO-CEDOX*

Normal mode:   $Cl_2$
ECO mode:      CEDOX$_{ECO}$

| $Cl_2$ | |
|---|---|
| Description | In this mode, the $Cl_2$ setpoint is controlled by a PI single feedback closed loop control.<br><br>The flocculation control system measures at a constant rate. |
| Setting range | Xp, Tn, Cl2 setpoint |

| CEDOX$_{ECO}$ | |
|---|---|
| Description | In CEDOX $_{ECO}$ mode, the mode is controlled based on the mV setpoint (see under CEDOX). There is a digital input to switch the system to ECO mode.<br><br>The flocculation control system measures at a constant rate.<br><br>This ECO mode can also be used for disinfectant control in combination with reduction of the circulation. |
| Setting range | ORP setpoint $_{ECO}$, $Xp_{ECO}$, $Tn_{ECO}$ |

### 3.4.5    Limit contacts

The limit values are issued via relay contacts and the color display. The number of available limit contacts depends on the configuration. A maximum of 8 limit contacts are possible. The additional relay board provides a further 4 limit contacts.

Each limit contact can be assigned the following functions:

| | | |
|---|---|---|
| Limit value = Min | => | all measuring values can be selected individually $Cl_2$, pH, mV, Cl-N, conductivity, temperature) |
| Limit value = Max | => | all measuring values can be selected individually $Cl_2$, pH, mV, Cl-N, conductivity, temperature) |
| Digital inputs | => | 1 to 3 can be selected individually |
| Errors | | |
| Sample water STOP | | |
| circulation | => | Circulation controller STOP |

*Unlatched limit contact without acknowledgment option*

- The symbol lights up in the event of an alarm and goes out automatically when the condition is eliminated.
- The same applies to the contact.

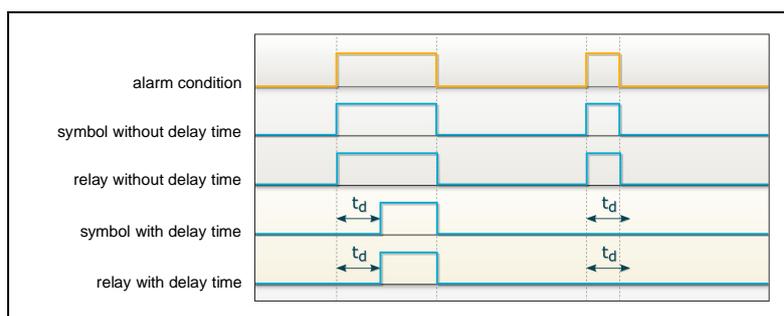

Image 5   Unlatched limit contact without acknowledgment option

*Latched alarm with reset acknowledgment option*

- The symbol flashes in the event of an alarm until it is acknowledged.
- The symbol also goes out even if the conditions still apply when the alarm is acknowledged.
- The relay is inactivated, even if the condition still applies.

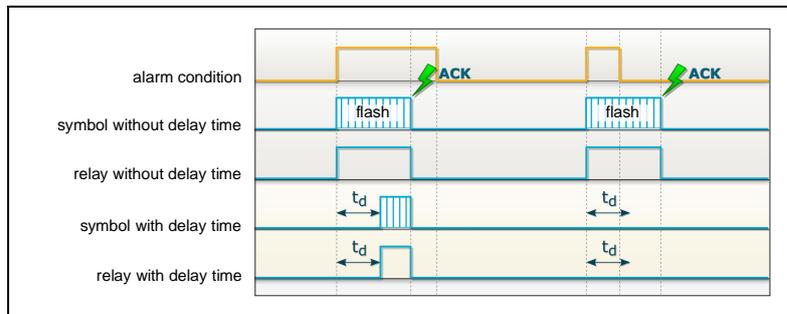

Image 6   Latched alarm with reset acknowledgment option

*Latched alarm with acknowledgment (acknowledgment option)*

- The symbol flashes in the event of an alarm until it is acknowledged.
- If the condition is no longer present when the alarm is acknowledged, the symbol disappears.
- If the condition is still present when the alarm is acknowledged, the symbol is reset from flashing to a permanent state. The symbol lights up until the condition is eliminated (auto-reset).
- The relay is only inactivated if the condition is eliminated.

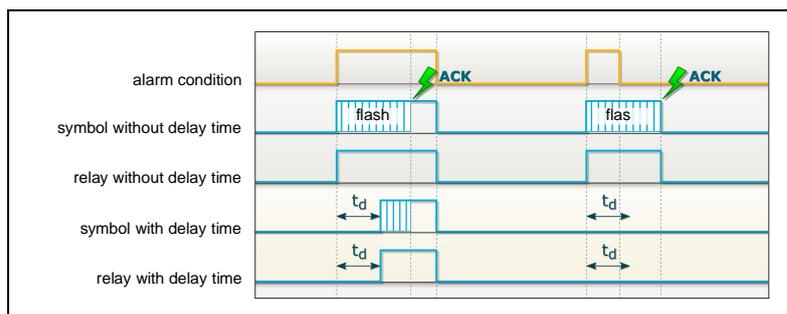

Image 7   Latched alarm with acknowledgment (acknowledgment option)

### 3.4.6    Interfaces

The following interfaces are available:

- CAN interface
- RS485 interface
- USB interface
- Ethernet interface/Modbus TCP interface

*Please note*

The interfaces are described in detail in chapter 4. Interfaces.

### 3.4.7    Actuator feedback

The actuator feedback of the 700 P electronics module is set at the factory to potentiometers with 1 kOhm. The device must be configured via DIP switch S4 (see A&C board) for other feedback signals.

Potential signals include:

- Potentiometer 1 kOhm
- Potentiometer 5 kOhm

*A    DIP Switch*

Switch settings DIP switch S4:

|                    | S4-A 1 | S4-B 2 | S4-C 3 |
|--------------------|--------|--------|--------|
| Potentiometer 1k   | OFF    | OFF    | ON     |
| Potentiometer 5k   | OFF    | OFF    | OFF    |
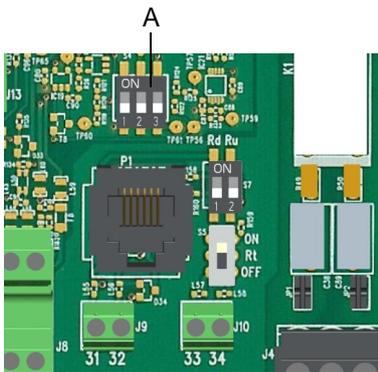

### 3.4.8    Digital inputs

Three digital inputs are integrated in the electronics module A&C board. These inputs are provided for connecting voltage-free contacts (< 100 Ohm) and have an internal 5V power supply.

*Warning!*

Do not apply a voltage to the digital input terminal!

### 3.4.9    Relay outputs

The 700 P electronics module has a maximum of eight or twelve relays, each with a changeover contact. These switches are assigned various switching tasks depending on the respective application. The corresponding diagrams are defined in chapter 9. "Wiring Diagrams". In order to switch larger inductive loads, we recommend installing an additional switching element such as a contactor or load relay to guarantee the contacts have a longer service life.

The relay contacts of the alarm or controller outputs are factory-protected by RC elements. These provide radio interference suppression for inductive loads such as pumps, motors, etc.

*Connecting small loads*

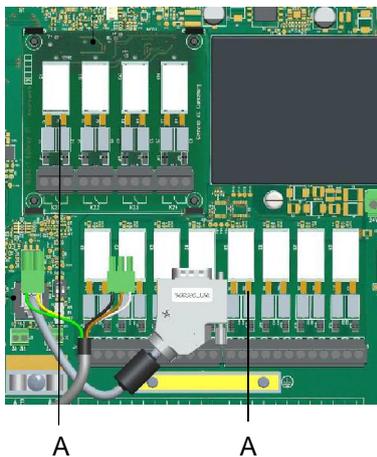

*A   Plug-in jumpers*

When connecting small loads to a power supply, such as contactors or servomotors with low power consumption, e.g. V10K, the quiescent current through the RC elements may be sufficient to activate the load (hum of the servomotor, contactor does not drop out, etc.). In this case, the plug-in jumpers of the relevant contacts should be removed to deactivate the RC circuits.

|     |        |     |         | 4-way relay, additional board: | |
| --- | ------ | --- | ------- | --- | ----- |
| K1  | JP1/2  | K5  | JP9/10  | K21 | JP1/2 |
| K2  | JP3/4  | K6  | JP11/12 | K22 | JP3/4 |
| K3  | JP5/6  | K7  | JP13/14 | K23 | JP5/6 |
| K4  | JP7/8  | K8  | JP15/16 | K24 | JP7/8 |

*Please note*

When using internal power (L1 and N/L2) for power supply of dosing machines or external devices the power consumption must not be higher than 6 A in total.

### 3.4.10    Adaption (only applies to free Cl$_2$)

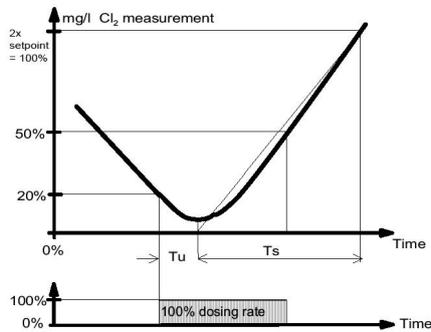

The adaption programme automatically determines the control parameters for free chlorine during commissioning. The adaption can be run separately for normal operation and ECO mode in order to find the suitable controller parameters for both operating modes.

*Application*    The adaption is used for automatic ascertainment of the reaction times of the control loop (loop dead time Tu and loop rise time Ts) or the resulting control parameters Xp and Tn.

> *Please note*
>
> The control parameters Xp and T ascertained by the adaption must be considered as a recommendation for the first commissioning!
> The control parameters Xp and Tn can be manually optimized to ensure maximum control quality.

*Requirements*    The following requirements must be met:

- Positioner set to automatic (manual wheel engaged)
- Dosing pump set to automatic
- Calibrated Cl$_2$ measuring (zero point and DPD value)
- Loop dead time < 60 min
- Loop rise time < 480 min (8 h) for 0 to 100 % measurement range
- Decomposition time < 480 min (8 h) of the current measuring value to 20% of the 2x setpoint
- Correct menu setting of the end value, control direction (direct or inverse), actuator (e.g. positioner), positioner running time (Ty)

Adaption may not be started:

- If a large volume of fresh water is being added
- If the measuring cell has not been run in
- During cleaning work
- During filter backwashing
- While the circulation changes
- During peak chlorination

*Starting adaption*

To start the adaption, proceed as follows:

**1** Call up the basic screen.

**2** Press the menu field Parameter "Cl2 free".

**3** Press the menu field "Functions".

**4** Press the menu field "Adaption".
The loop parameters Tu, Ts, $Tu_{ECO}$ and $Ts_{ECO}$ will be shown.

**5** In the menu "Cl2 free – Adaption", press the "Start" button.
The current phase (13 in total) of the adaption is displayed.

**6** Confirm the adaption required with "ADAPTION OK".

**7** Press the Home key and the screen changes to the basic screen.
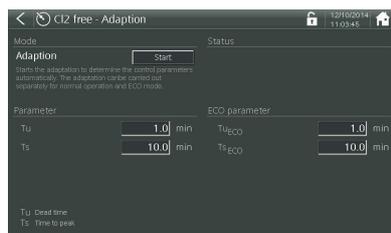

*Error message during adaption*

If adaption is not successful, the error message "ADAPTION?" is displayed. The reason for this may be problems with the dosing system or loop times. Errors must be rectified in order to continue with the adaption. See also "Completing adaption with errors" on page 34.

*Adaption sequence*

Each adaption phase is then displayed with a status message:

| Display text | Explanation |
|---|---|
| 1:  Initialization | Start |
| 2:  Control signal Ym = 0% | Chlorinator to 0 % or dosing pump off |
| 3:  Wait of act. value X = 20% | Delay until actual value < 0.2 x end value |
| 4:  Set control signal 100% | Chlorinator to 100 % or dosing pump on |
| 5:  Wait of control signal 100% | Wait until chlorinator reaches 100 % |
| 6:  Init. dead time measurement Tu | Start dead time measurement |
| 7:  Dead time measurement Tu | Measurement of the loop dead time Tu |
| 8:  Check dead time Tu | Plausibility enquiry dead time |
| 9:  Calculate initial value Ts | Start of rise time measurement |
| 10: Measure peak-time Ts | Measurement of the loop rise time Ts |
| 11: Calculate parameter | Calculate control parameters |
| 12: Set control signal Y = 0% | Chlorinator to 0 % or dosing pump off |
| 13: Wait of control signal 0% | Wait until chlorinator reaches 0 % |

Various status messages can be displayed, depending on the selection of the actuator. Different status messages also have different execution times. It is possible that some status messages are only displayed briefly or not at all if the execution time is very short.

*Attention!*

Adaption can take up to 13 hours, depending on the control loop. During this time no errors should occur on the control loop (e.g. filter backwashing, changes in the circulation or widely fluctuating number of visitors).

*Please note*

The adaption procedure can be terminated at any time with "CANCEL". The previously set parameters remain unchanged.

*Completing adaption without errors*

When the loop times (dead time Tu and rise time Ts) have been completed without error, calculation of the control parameters Xp and Tn commences. This is shown by "ADAPTION OK". The calculated parameters are entered in the menus. When adaption has been concluded, the measuring amplifier adjusts with the newly calculated control parameters and continues in the selected operating mode (e.g. automatic).

To monitor the determined loop times they are entered into the "Tu" and "Ts" menus .

If any errors in the control loop do occur during adaption (e.g. filter backwash or changes in the circulation speed), this may lead to incorrect loop times, resulting in wrong control parameters being determined.

*Attention!*

The remaining control parameters Ymin, Ymax and Tp are not influenced when adaption is performed. The control parameters Xp and Tn are determined for Ymin = 0 % (no basic load) and Ymax = 100 % (no dosing rate limitation). Depending on the system, if a basic load Ymin or a dosing rate limitation Ymax is required, remember that the control range is restricted. There is then the risk of excessive chlorination (Ymin too high) or inadequate chlorination (Ymax excessively limited).

*Completing adaption with errors*

If errors occur in the control loop during adaption (e.g. filter backwashing, changes in the circulation or widely fluctuating number of visitors to the pool) or if the reaction times of the control loop are too long, adaption is interrupted.

*Please note*

If any of the error conditions described below occur, adaption is interrupted. The measuring amplifier displays one fault message. The "old" parameters Xp and Tn are not changed.

**Possible error messages:**

**Initial value not reached (display: "T = > 8h")**
When adaption has started and the dosing system has closed or
the dosing pump has switched off, the measuring amplifier waits
until the actual value has dropped below the initial value (0.2 x the
measurement range value). This delay is indicated by "2: X = 20
%" being displayed and must not exceed 8 hours.

**Loop dead time too long (display: "Tu = > 1h")**
The value determined by the time measurement between starting
up the dosing, switching on the dosing pumps and the rise of the
actual value may only take a maximum of 1 hour. This measured
time is displayed by "6: Tu!".

**Loop rise time too long (display: "Ts = > 8h")**
The time is determined by a measurement, which the control loop
requires at a 100 % dosing rate of the dosing system or the dosing
pump, to increase the actual value to 50 % of the measuring range.
This measurement is indicated with "9: Ts!" and may take a maxi-
mum of 4 hours.

*Determination of the control pa-*      If the loop times Tu and Ts are already known or if these cannot
*rameters with known Tu and Ts*      be determined automatically due to specific system conditions, the
*times*      loop times can be entered into the "Tu" and "Ts" menus. When Tu
or Ts are saved, the control parameters Xp and Tn are also calcu-
lated and entered in the menus.

### 3.4.11    Flocculation control

In the "Input/Output" menu, an output "Flocculation" can be
defined. This output is used for example to drive a dosing pump for
flocculant dosing.

**"Signal default" setting**
The dosing rate with which the flocculation output doses the chem-
ical is calculated automatically in % with the input parameters, dos-
ing rate of the pump, and amount of flocculant added.

**"Signal default with ECO" setting**
For reduced circulation a second dosing capacity (50 %) is calcu-
lated at the same time. Both dispensing rates can also be entered
directly. To activate the second dosing capacity (ECONOMIC),
assign the function "Changeover ECONOMIC" to one of the digital
inputs. An external contact (NC) with the function "Circulation low-
ered" must be connected to the corresponding DI.

**"Circulation" or "mA input 2" setting**

In this setting, the dosing rate of the flocculation pump according to the measured flow rate signal is linearly controlled (see configuration of the analog inputs on page 94).

An output for dosing pump 2p, pulse pump 2 or an analog mA output (optional) is available for the dosing. Cycle period, number of pulses or mA signal can be selected.

*Please note*

Flocculation is only active if the measured pH value is within a defined range (6.00 to 8.00). These values can be set the "Flocculation" menu.
If the pH measurement is not available, the flocculation function is not supported!
The flocculation output is linked to the controller operating mode of the chlorine controller and is only active if the chlorine controller is working in Automatic mode.
With "Controller STOP" of the chlorine controller, the flocculation output is not active.

### 3.4.12    DIN/ECO contact

From the menu field Parameter "Cl2 - Functions - ECO Mode", an output "DIN/ECO function" can be defined. The contact is activated if the following water quality parameters according to DIN (DIN = German Industrial Norm) are reached:

- $Cl_2$      =>      0.3 to 0.6 mg/l
- pH      =>      6.5 to 7.6
- ORP      =>      750 mV
- Cl-N      =>      0.2 mg/l
- Hysteresis for all measurements 0.03

These limits can be set in the respective measurement range.

The DIN contact can also be used time-controlled as ECO contact via the internal ECO timer function, when in the menu field "DIN/ECO function" "ECO Timer" is selected. If the function "DIN function" is selected in addition, the condition of the DIN function must be met as well for the DIN/ECO relay to switch.

The DIN contact can be used for the following functions:

- Enabling of circulation reduction in conjunction with a filter control
- A visual signal "Water quality good/bad".
- It is possible to switch to ECO parameter via digital input 1 to 3

*Please note*

The function is only available if there is a $Cl_2$, pH and ORP measurement.
If there is no Cl-N measurement, the DIN function is provided without Cl-N measuring value.
The DIN contact remains active in spite of "Controller STOP" as long as the measuring values are within the DIN limits.

### 3.4.13    ECO mode

The 700 P electronics module offers several ways to switch to ECO mode (see "ECO mode" on page 85). There is the option to switch to a different setpoint (setpoint ECO), different control parameters or to CEDOX mode.

If necessary, e.g. during the night, circulation is reduced, i.e. the 700 P electronics module, when in ECO mode, switches to ECO parameter, ECO setpoint or if the relevant setting is realized, to CEDOX mode. Flocculant dosing is also switched to ECO mode.

The setting for the ECO changeover is done with the menu field "Input/Output - Digital Inputs" or "Cl2 Functions - ECO Mode." The digital contacts DI1, 2, 3 or several internal functions can be configured for the ECO changeover.

### 3.4.14    Safety functions

The safety functions integrated into the control unit are:

- Safety deactivation if the circulation fails and/or if the dosing tank signals that it is empty and also if the sample water supply fails
- Dosing time monitoring and the feed time delay
- Alarms
- External STOP for all controllers
- "Positioner closed" function in the event of a power failure (only if positioner has external power supply)
- Password protection on two levels

### 3.4.15   Super-chlorination

This function is primarily an addition in combination with CEDOX control or when low concentrations of chlorine occur frequently.

The "peak chlorination" function allows a super chlorination of the pool water on a scheduled basis. Peak chlorination can also assist in the prevention of algae growth in outdoor pools.

Via a maximum of three freely definable timer, the 700 P electronics module can automatically adjust to a higher chlorine value, which can even be set to above the measurement range. These switch on times can be activated daily, weekly, or every two, three or four weeks.

The duration of the peak chlorination can be defined and starts when the peak chlorination setpoint is reached.

For safety reasons, the system includes a time limit which defines the maximum time for which this peak chlorination value can be activated. If the peak chlorination value is not reached during this time, the process is canceled and an error message is displayed.

There is the option of switching off the alarm and the overall chlorine control during peak chlorination. Once the $Cl_2$ value is back at the setpoint, the alarm and the overall chlorine control are reactivated and the „peak chlorination" symbol is no longer displayed.

As long as the setpoint peak chlorination is used and maintained, the HC peak chlorination symbol continues to be displayed as the operating mode symbol for the chlorine control. Chlorine dosing stops after the normal chlorine setpoint is reached again and the super-chlorination symbol is no longer displayed.

## 3.5 Technical Data electronics module (module type E01)

*Housing*

| Dimensions (WxHxD) | 320 x 311 x 153mm |
|---|---|
| Weight | approx. 4.5 kg |
| Protection rating | IP66 |
| Mains connection | 100 to 240 V AC ± 10% (50 to 60 Hz, 48 W) or 24 V DC, 30 W |

*Display*

| 7" graphic color display with backlit LED and resistive touch-screen. Resolution 800 x 480 pixels |
|---|

*Insulation*

| Overvoltage category | 2 |
|---|---|
| Contamination level | 2 |
| Protection category | 1 |

*Operating conditions*

| Ambient temperature | 0 to 50 °C |
|---|---|
| Humidity | < 80 %, non-condensing |
| Environment | No direct sunlight |
| Atmospheric pressure | 75 to 106 kPa |
| Max. working height | 2,000 m |
| Storage temperature | -20 to +70 °C |
| Noise emission | <45 dB |

*Digital inputs of the 700 P electronics module*

| 3x for voltage-free contacts (with internal power) | |
|---|---|
| Freely selectable function in the menu | |
| When input open | DI active |
| When input closed | DI inactive |

*Measurement inputs*

| 1x feedback input for positioner feedback. Potentiometer 1kOhm |
|---|
| CAN sensor input to connect DEPOLOX® Pool E or DEPOLOX® 5 E flow cell and total chlorine membrane sensor TC3 CAN and SiDiSens conductivity (LF) module to measure the following: Free chlorine, Combined/total chlorine, pH value, ORP voltage, Conductivity, Temperature (measuring range 0...50°C/32...122°F), Flow rate monitoring |

*Relay outputs*

| 8x changeover contacts (optional 4x in addition) |
| --- |
| Finder relay type<br>max. continuous current                              6 A<br>max. switching capacity     AC1           1500 VA<br>max. switching capacity     AC15 (230V)     250VA<br>max. switching capacity     AC3 (230V)      185 VA<br>max. switching current      220V DC        0.2 A<br>                                 30V DC             3 A |
| Panasonic DSP1 relay type<br>5 A, 125/250V AC (general use)<br>1/6 HP (122 VA) 125/250V AC<br>5 A, 30V DC (resistive load)<br>30W max., 1 A, 30V DC – 0.24 A, 125V DC (inductive load)<br>B300 |

**Please note**

When connecting capacitive loads (e.g., load with integrated power supply), an additional contactor with appropriate specification must be provided. When connecting relays to external devices, a 5A fuse must be provided as overload protection.
Typical use of relays: enable contact for dosing device, control of motors or dosing pumps.

*Analog outputs*

| 4x mA outputs with mA output card 0/4 to 20 mA |
| --- |
| freely configurable |
| Load max. 500 ohm, accuracy < 0.5 % FS |
| Galv. isolated up to 50 V relative to earth |

*Interfaces*

| RS485 for connection to ChemWeb server, OPC-server, Process Monitoring system or control system for data visualization |
| --- |
| Ethernet interface |
| CAN interface for data communication with the DEPOLOX® Pool E or DEPOLOX® 5 E flow cell |
| USB interface for data export, firmware update and system setup download as well as upload. |

# 4. Interfaces

## 4.1    CAN interface

The 700 P electronics module is equipped with a CAN interface. The CAN interface acts as a sensor bus to the flow cell.

Measuring values are digitally transferred from the flow cell to the 700 P electronics module. The DFMe electronics module integrated in the flow cell converts the extremely sensitive sensor signals to interference-free digital transfer signals and passes them on to the 700 P electronics module.

The connection between the flow cell and the 700 P electronics module consists of a four core CAN line with connector. Two cores are for the 24 V DC power supply of the electronics of the sensor and two cores are for CAN data transfer. The cable shielding is the ground connection. The maximum cable length must not exceed 1000 m.

*Please note*

The CAN interface is electrically isolated. It must not be connected to external bus systems!

*Connection CAN connector*    Power supply + CAN bus

Connection cable with 5-pin M12 plug and 5-pin M12 socket for CAN bus terminal plug or to connect other CAN bus components

| Pin 1 | Screen |
|-------|--------|
| Pin 2 | +24V |
| Pin 3 | 0V |
| Pin 4 | CAN high |
| Pin 5 | CAN low |

M12 plug    M12 socket
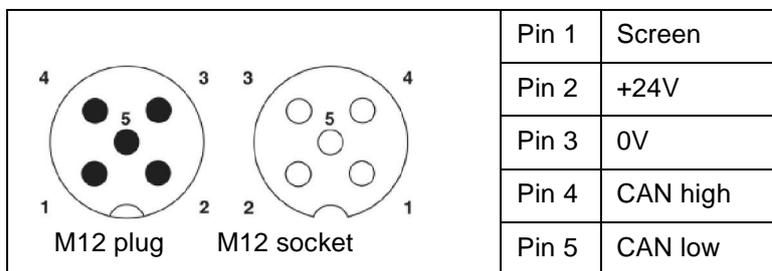

The following diagram shows the CAN connection between the flow cell and the 700 P electronics module.

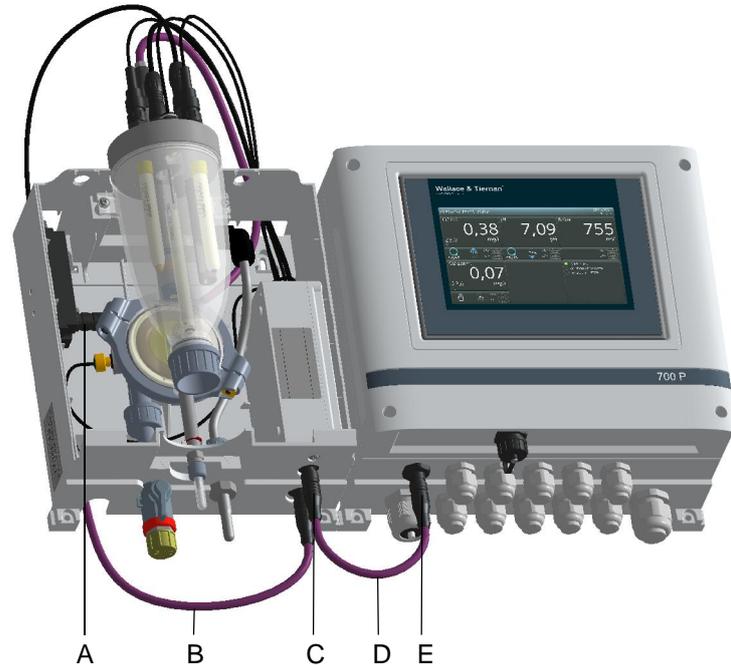

Image 1   Cross-section flow cell and 700 P electronics module

*A   CAN connection at SiDiSens LF module for connection of
    total chlorine membrane sensor TC3 CAN*
*B   CAN connection cable SiDiSens conductivity*
*C   CAN extension socket to connect SiDiSens LF module
    or the membrane sensor*
*D   CAN connection line already integrated on flow cell or on
    DFMe electronics module*
*E   CAN socket for connection of CAN connection cable of
    the flow cell or DFMe electronics module*

*Please note*

The CAN connection cable of the SiDiSens conductivity (LF) module is connected to the CAN extension socket for the conductivity measurement.
The connection of the membrane sensor for total chlorine TC3 CAN in this case is to the CAN socket of the SiDiSens LF module. Without a conductivity measurement, the total chlorine membrane sensor is connected directly to the CAN extension socket.
When retrofitting the conductivity measurement or the total chlorine membrane sensor, this extension socket may have to be retrofitted as well.

## 4.2    RS485 interface

The RS485 interface is used for data transfer to superordinate guide systems such as Process Monitoring system or other systems that support the Wallace & Tiernan RS485 protocol. For more detailed information, please refer to the instruction manual "RS485 interface". These can be requested from your affiliate or download from our website.
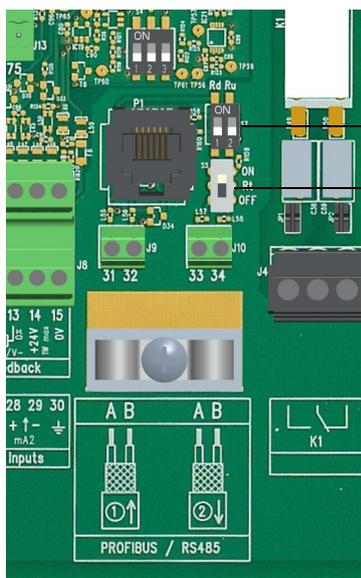

The RS485 interface is electrically isolated. To integrate into a Wallace & Tiernan bus system, four terminal strips, a terminating resistor $R_t$ and balancing resistors $R_u$ and $R_d$ are integrated.

If the Pool Management system is integrated in an RS485 bus system, then, at the time of installation, the device must be connected to the end of the bus via the terminals 31/32 (1↑).
When installed in the middle of the RS485 bus, the terminal 31/32 must be used for the incoming bus cable and terminal 33/34 (2↓) for the outgoing bus cable.

Image 2   Section of board

A   *Dip switch to activate balancing resistors $R_u$ and $R_d$*
B   *DIP switch for activating the bus terminating resistor $R_t$*

*Please note*

When installation is at the end of the bus, the DIP switch $R_t$ must be activated (position ON).
When installation is in the middle of the RS485 bus, $R_t$ must be set to OFF.

A shielded, twisted 2-wire cable (twisted pair) with a wire cross-section of at least 0.25 mm² (24 AWG) must be used as the transfer medium. The characteristic impedance of the cable must be between 100 ohms and 130 ohms, the cable capacity if possible < 60 pF/m. The shielding improves the electromagnetic compatibility (EMC). The bus cable is always wired as a bus from device to device. Any stub cable to the bus device must not exceed a length of 0.3 m. We recommend the cable W2T504634 – LiYCY 2 x 0.25 mm².

*Please note*

Longer junctions in the bus cable are not permitted!

## 4.3 USB interface

The 700 P electronics module is equipped with a USB interface. A USB socket on the bottom of the 700 P electronics module offers an external connection without having to open the device. The USB port is used to export data and update the firmware as well as to export and import the parameter settings. Further information can be downloaded from our Homepage.

## 4.4 Fieldbus connection

*Profibus DP*    A fieldbus converter is available for connection to a superordinate fieldbus system Profibus DP. Please contact your affiliate if necessary, see chapter 8.1.2 "Fieldbus converter".

*Modbus TCP*    The 700 P electronics module has an integrated Modbus TCP interface, see chapter 4.6 "Modbus TCP interface".

## 4.5 Ethernet interface

The 700 P electronics module has a built-in LAN port. It allows access to data from the 700 P electronics module via network-compatible devices (PC/laptop) and installed VNC viewer. By connecting to a WLAN router, this provides access to data via various internet-compatible devices, e. g. tablet PCs and smartphones with VNC viewer. This enables 1:1 remote operation, as with the 700 P electronics module, via the VNC display. The VNC viewer is password protected. The password for the VNC viewer is „100". In addition, the LAN interface supports data communication with higher-level control systems via Modbus TCP protocol, see chapter 4.6 "Modbus TCP interface". Both communication options are possible simultaneously.

*Please note*

This instruction manual does not cover the installation and setup of the 700 P electronics module in connection with routers. Responsibility lies with the operator.

*Please note*

The Ethernet interface does not support data connection via Profinet.

*Please note*

For security reasons, access to the 700 P electronics module should only be given to authorized personnel. Furthermore, permanent unsafe connections via the Internet or WLAN are not permitted. Safe connections can for  example be set up via a VPN secured communication channel or an encoded WLAN connection. The 700 P electronics module is designed for use in an Intranet (closed network). Please refer to chapter 2.2 "General safety instructions", Section "IT Safety".

The Ethernet connection is designed in accordance with IEEE 802.3. It is designed as an 8P8C socket (often referred to as RJ45 socket) and is screened. Connection to the HUB or switch can be realized with a 1:1-wire and screened patch cable. Direct connection to a PC network card is possible using a patch cable (1:1) or a crossover cable (crossover network cable).

The connection runs in Auto negotiation mode. The data transfer rate and full or half duplex are defined automatically with the connected switch/HUB.

The Ethernet settings of the 700 P electronics module can be configured via the System settings menu field. In the Ethernet settings menu, you can select whether the IP address is to be automatically assigned or permanently assigned. If permanently assigned, the IP address, Subnet mask and Standard gateway must be entered. To do so, contact the network administrator if the device is being integrated in a network. The MAC address can be found on the back of the HMI but it is also displayed in the Ethernet settings menu.

## 4.6 Modbus TCP interface

From software version 1.31 onward, the integrated Ethernet interface also supports data communication via Modbus TCP protocol. Various data points are available for data exchange, see chapter 4.6.1 "Data formats".

| Transmission technology | Ethernet in accordance with IEEE802.3 |
|---|---|
| Connection | RJ45 socket, internal |
| Communication | Supported commands:<br>FC03: Read Multiple Registers<br>FC16: Write Multiple Registers<br>FC06: Write Single Register |

The 700 P electronics modul works as a Modbus TCP slave (server). The data packages are transferred as TCP/IP data packages via the Ethernet interface. Access is via the Modbus register. The port used for the communication protocol Modbus TCP is 502. The reference tables have the following structure:

| COLUMN | DESCRIPTION |
|---|---|
| Modbus register | Modbus register address |
| E-byte | Byte address input data |
| A-byte | Byte address output data |
| Module name<br>Profibus DP | Name of the module in the GSD file |
| Description | Name of the data point |
| Length | Number of bytes in the data point |
| Format | Data format of the data point<br>(see chapter 4.6.1 "Data formats") |
| Access | Access right<br>R = Read<br>W = Write<br>RW = Read & Write |
| Description | Additional information on the data point |

### 4.6.1    Data formats

The table below contains the data format used for transmission of the process data:

| Data type | Size (bit) | Typical names | Value range min. | Value range max. |
|---|---|---|---|---|
| INT8 | 8 | yes | -128 | 127 |
| UINT8 | 8 | no | 0 | 255 |
| INT16 | 16 | yes | -32.768 | 32,767 |
| UINT16 | 16 | no | 0 | 65,535 |
| INT32 | 32 | yes | -2,147,483,648 | 2,147,483,647 |
| UINT32 | 32 | no | 0 | 4,294,967,295 |
| FLOAT | 32 (8/23)[1] | yes | $3,4*10^{-38}$ $(-3,4*10^{-38})$ | $3,4*10^{38}$ $(-3,4*10^{38})$ |
| ASCII | n * 8 | no | – – | – – |

[1] Exponent / mantissa

For the byte sequence in which the various data types are saved in the memory or transferred, see the following figures.

*Data type INT8 / UINT8*

Example using the figure 50 (32 hex):

| Register X | |
|---|---|
| Byte 1 | Byte 2 |
| 00 $_H$ | 32 $_H$ |
| 0 0 0 0 0 0 0 0 0 0 1 1 0 0 1 0 | |
| 15                               0 | |

*Data type INT16 / UINT16*

Example using the figure 12589 (312D hex):

| Register X | |
|---|---|
| Byte 1 | Byte 2 |
| 31 $_H$ | 2D $_H$ |
| 0 0 1 1 0 0 0 1 0 0 1 0 1 1 0 1 | |
| 15                               0 | |

*Data type INT32 / UINT32*

Example using the figure 1212117675 (483F72AB hex):

| Register X | | Register X+1 | |
|---|---|---|---|
| Byte 1 | Byte 2 | Byte 1 | Byte 2 |
| 72 $_H$ | AB $_H$ | 48 $_H$ | 3F $_H$ |
| 0 1 1 1 0 0 1 0 1 0 1 0 1 0 1 1 | | 0 1 0 0 1 0 0 0 0 0 1 1 1 1 1 1 | |
| 15                        0 | | 31                        16 | |

*Data type FLOAT*    The Float or Real values are transferred in accordance with the IEEE754 Standard Format for 32-bit values. Example using the figure 1.25.

| Hexadecimal: | 3F  A0  00  00 | (0: + ; 1: -) |
| Signed (S): | 0 | |
| Exponent (E): | 0111 1111 | |
| Mantissa (M): | 010 0000 0000 0000 0000 | |

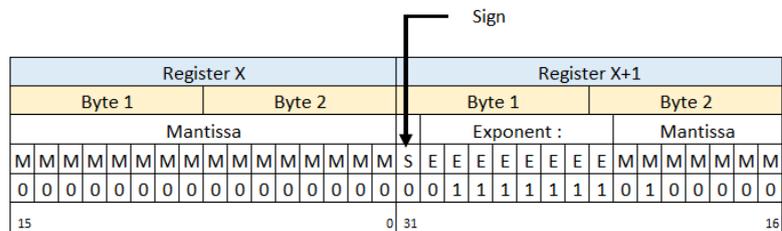

*Data type ASCII*    The characters are transmitted in accordance with ASCII Codepage 437. Example "mg/l"

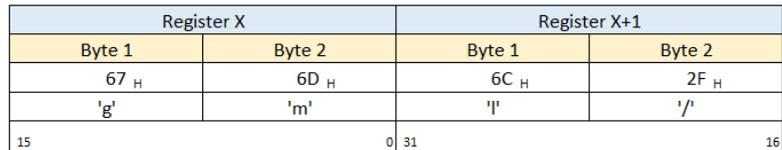

## 4.6.2    Reference list

The following reference list contains all available data points and values that can be read and written via Modbus TCP. It must be noted that write commands should not be set to variables or the Modbus register cyclically or repeatedly set to the same values. Permanent writing of values can cause damage to the device (memory).

Modbus Register DEPOLOX Pool E 700 P

IP address: IP address of the device, e.g. 192.168.200.12          Port: 502

| MB Register | Description | Type | No. byte | Access | Max. | Min. | Description |
|---|---|---|---|---|---|---|---|
| | [400001-400099] Info area | | | | | | |
| 400001 | System name | ASCII | 20 | RD | | | e.g. "DEPOLOX Pool E 700 P" |
| 400011 | Software version | ASCII | 10 | RD | | | e.g. "V:1.31" |
| 400016 | Current date | ASCII | 10 | RD | | | e.g. "21.02.18" |
| 400021 | Current time | ASCII | 6 | RD | | | e.g. "13:16" |

| MB Register | Description | Type | No. byte | Access | Max. | Min. | Description |

# 5. Installation

## 5.1    Scope of supply

*Please note*

The 700 P electronics module (module type E01) is configured in the factory according to the customer's specific requirements, with the DEPOLOX$^®$ Pool E flow cell (module type D01) or DEPOLOX$^®$ 5 E flow cell (module type D01) according to the variant code. The scope of delivery differs in the versions of the flow cell, the sensors, electronics components and accessories. The variant code is printed on the type plate and on the packaging sticker. See Chapter 3.2 "Versions".

The 700 P electronics module is supplied with the following:

- 700 P electronics module (module type E01)
- Top-hat rail
- Assembly accessories
- Instruction manual 700 P electronics module

Depending on the configuration ordered, the scope of delivery of the Pool Management system includes:

- DEPOLOX$^®$ Pool E or DEPOLOX$^®$ 5 E
  flow cell (module type D01)
  non-pressurized or pressurized version
- LED glow stick
- Sensors
  - Free chlorine
  - Total chlorine membrane sensor TC3 CAN
  - pH
  - ORP
  - Conductivity
- 4-way mA analog output
- Additional relay board 4-way
- Instruction manual DEPOLOX$^®$ Pool E or DEPOLOX$^®$ 5 E
  flow cell

## 5.2    Transport and storage

*Transport*    The 700 P electronics module is supplied in standard packaging. During transport, the packaged system must be handled carefully and should not be exposed to wet weather or moisture.

Check that the transport packaging is undamaged. In the event of damage, please inform the transport company immediately, as your rights to compensation will otherwise be lost.

If a component is damaged, please contact your affiliate immediately.

Keep the packaging until the 700 P electronics module has been correctly installed and taken into operation.

*Storage*    Store the 700 P electronics module, the flow cell and the sensors in a dry condition without any residual water in a dry place that is not exposed to the weather. Storage temperature, see Chapter 3.5 "Technical Data electronics module (module type E01)".

## 5.3    Requirements for the ambient conditions

*Please note*

Correct and safe operation can only be guaranteed if the requirements for the ambient conditions are met. All applicable national and local regulations must be observed!

### Installation site

The following points must be taken into account when installing the 700 P electronics module:

- The 700 P electronics module must be protected from moisture, rain, frost, heat and direct sunlight and must not be installed outdoors.
- Do not use the 700 P electronics module in environments where there are flammable gases, fumes or dust or conductive dust.
- Do not subject the 700 P electronics module to strong shocks or vibrations.
- The air in the room should be non-condensing.

## 5.4     Mechanical installation

*Please note*

The Pool Management System is comprised of the DEPOLOX® Pool E or DEPOLOX® 5 E flow cell and the 700 P electronics module. We recommend joint assembly of the modules. Leave a clearance of at least 250 mm above the Pool Management System for working with the sensors.

*Warning!*

**Risk of injury or damage to the installation!**

All electrical work on the equipment must be performed only by authorized and qualified electricians. Modifications to the device other than those described in this instruction manual are not permitted.

The following installation options are available to mount the flow cell and 700 P electronics module:

• with top-hat rail
• without top-hat rail

*Please note*

The 700 P electronics module is not suitable for electrical connection with permanently installed cable conduits. If the cable glands do not meet local installation rules and regulations, these glands must be replaced with suitable ones.

### 5.4.1   Mechanical installation with top-hat rail

Proceed as follows, see Chapter 5.4.3 "Dimension Drawings":

**1** Secure the top-hat rail to a solid wall using the supplied dowels and screws. (screws and dowels for fixing to a solid wall are included in the scope of delivery.)

*Please note*

If the device is to be installed on a suitable lightweight wall, use the relevant mounting fixtures (not included in the scope of delivery).

**2** Hook the 700 P electronics module onto the top-hat rail so that it is flush at the right.

**3** Fasten the 700 P electronics module to the solid wall at the bottom by the holders using dowels and screws.

**4** Hook the flow cell onto the top-hat rail on the left next to 700 P electronics module.

**5** Fasten the flow cell to the solid wall at the bottom by the holders using dowels and screws.

### 5.4.2    Mechanical installation without top-hat rail

Instead of hooking the flow cell and the 700 P electronics module onto the top-hat rail, they can also be hooked onto suitable tallow-drop screws by the top holding clips.

*Please note*

The dimensions for the drilling pattern can be found on the back of the plastic housing.

Proceed as follows:

**1** Affix the supplied tallow-drop screws and dowels to the solid wall (tallow-drop screws and dowels for fixing to a solid wall are included in the scope of delivery.)

*Please note*

If the device is to be installed on a suitable lightweight wall, use the relevant mounting fixtures (not included in the scope of delivery).

**2** Hook the 700 P electronics module into the tallow-drop screws.

**3** Fasten the 700 P electronics module to the solid wall at the bottom by the holders using dowels and screws.

**4** Hook flow module into tallow-drop screws.

**5** Fasten the flow cell to the solid wall at the bottom by the holders using dowels and screws.

*Please note*

If the 700 P electronics module and flow cell are mounted at separate locations, you must use CAN cable extensions (optional). The length of 1000 m must not be exceeded.

### 5.4.3     Dimension Drawings

**Non-pressurized flow cell module and electronics module**

**Pressurized flow cell and electronics module**
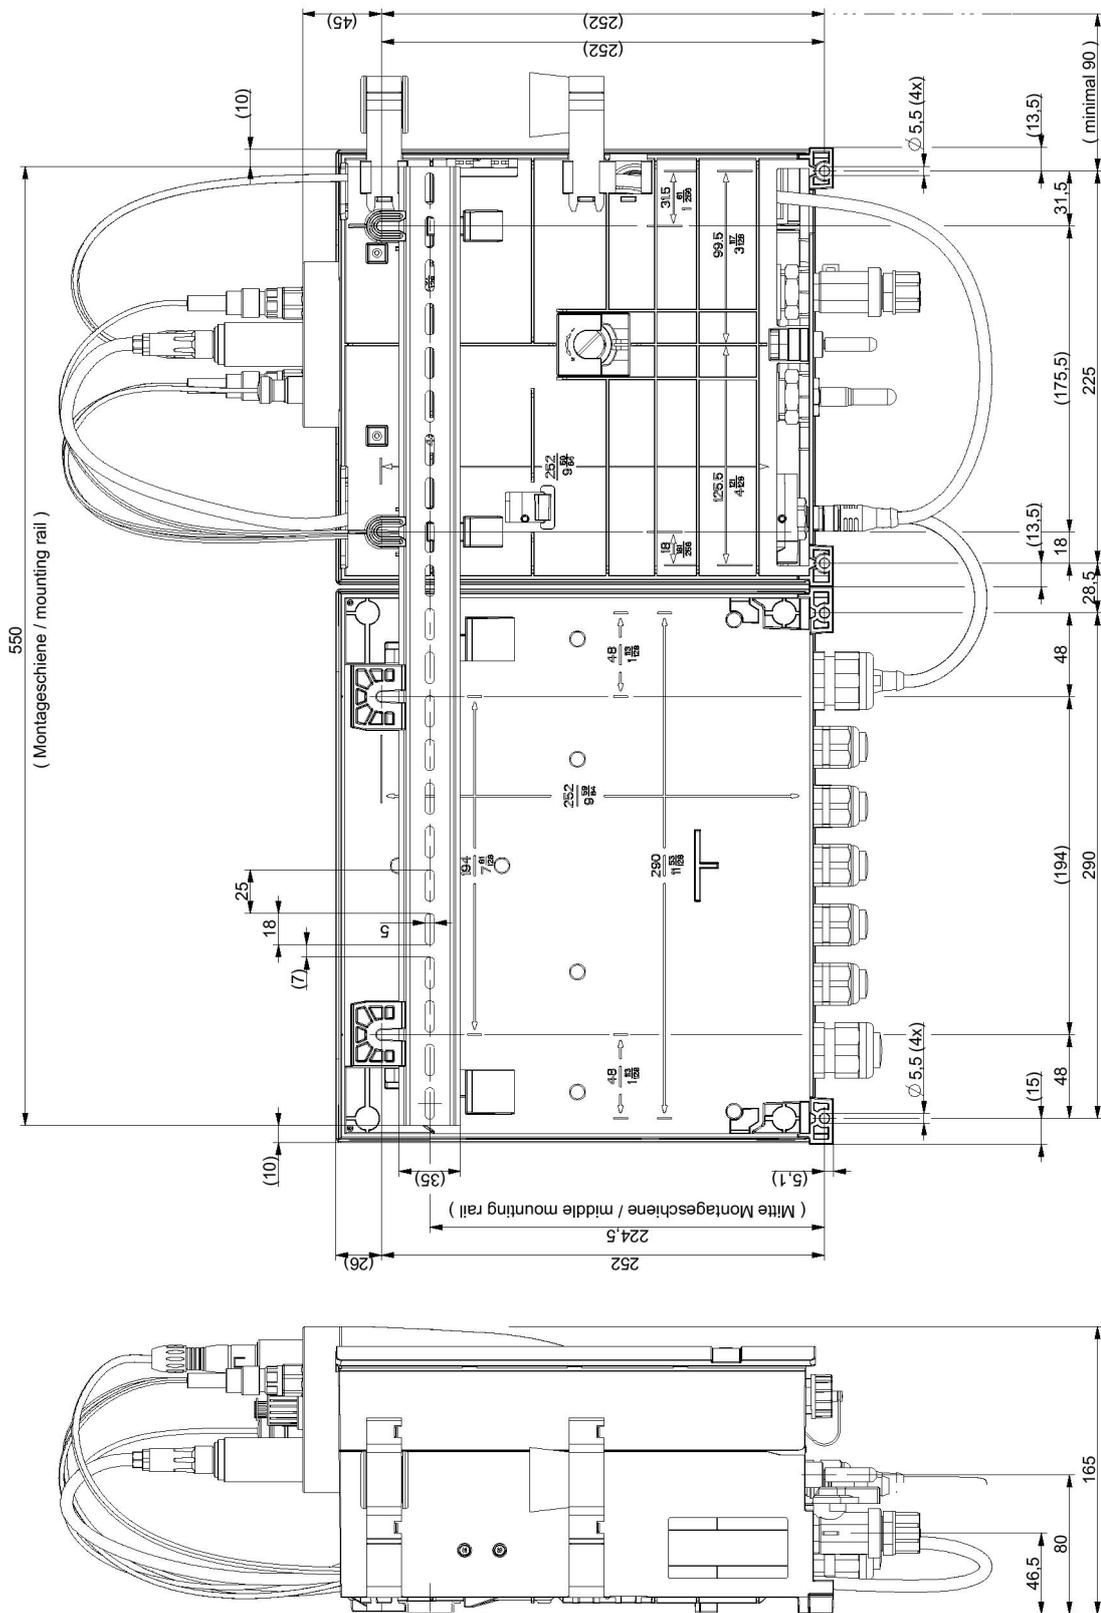

## 5.5    Electrical installation

*Warning!*

**Risk of injury or damage to the device!**

Only authorized and qualified electricians are permitted to install the 700 P electronics module and open the housing. The 700 P electronics module may only be put into operation when the housing is closed, and must be connected to protection earth. Modifications other than those described in this manual are not permitted.

Only wire the 700 P electronics module when it is disconnected from the mains power. Connect the 700 P electronics module in accordance with the wiring diagrams and applicable national and local regulations.

*Danger!*

**Risk of injury or death!**

External voltages may be connected even with the operating voltage switched off.

*Warning!*

**Risk of injury or damage to the device!**

The 700 P electronics module is not equipped with a mains switch and is in operation as soon as the supply voltage is applied. An external switch or circuit breaker with a clearly visible "OFF" switch position is therefore necessary.
When a local line fuse is used (6 A) at 100 to 240 V AC supply, the cross-section of the mains cable must be at least 0.75 mm² (AWG 18).
When connecting system components (e.g. devices, motors, pumps) as well as when entering operating data, the system components must be switched off in order to prevent uncontrolled activation or any incorrect operation.
Installations with internal supplied loads (e.g. dosing machines) or models with fixed installed connection wires (plug connection) must not have a current consumption higher than 6 A.

*Please note*

The 700 P electronics module is not suitable for electrical connection with permanently installed cable conduits. If the cable glands do not meet local installation rules and regulations, these glands must be replaced with suitable ones.

*Warning!*

**Risk of injury or damage to the device!**

High temperatures at the terminals of the relay and the power supply!

The terminals may become very hot with high ambient temperatures and the connected cables must be designed to withstand these temperatures.

Ambient temperature <30°C:
cable temperature resistant up to at least 60°C

Ambient temperature <40°C:
cable temperature resistant up to at least 70°C

Ambient temperature >40°C:
cable temperature resistant up to at least 80°C

*Electrical connections of 700 P electronics module*

*Warning!*

**Risk of injury or damage to the device!**

Only wire the 700 P electronics module when it is disconnected from the mains.

The 700 P electronics module is equipped with a variable voltage supply input and accepts AC voltages from 100 to 240 Volt and 24 V DC. When dimensioning, take into account the power consumption. Refer to Chapter 3.5 "Technical Data electronics module (module type E01)".

Proceed as follows:

**1** Open the housing cover of the 700 P electronics module. To do so, unscrew the housing cover and hook into the holders (A) on the base housing.

**2** Connect the power supply in accordance with the wiring diagram (see Chapter 9. "Wiring Diagrams").
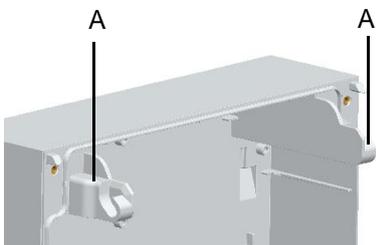

*Please note*

Note the correct polarity of the voltage connections and the correct dimensioning of the wire cross-sections (see "Chapter 3.5 "Technical Data electronics module (module type E01)"" – Power consumption).

**3** Wire the A&C-Board in accordance with wiring diagram Chapter 9. "Wiring Diagrams".

**4** Make sure that all cable glands are installed correctly.

**5** Refit the housing cover of the 700 P electronics module. Tighten the housing screws to a maximum torque of 0.7 Nm (± 0.15 Nm).

**6** Install CAN connection cable to the flow cell and 700 P electronics module (see Chapter 4.1 "CAN interface").

**7** Then switch on the 700 P electronics module. See Chapter 5.6 "Commissioning".

## 5.6    Commissioning

*Attention!*

**Risk of injury or damage to the device!**

To ensure safe and correct commissioning, knowledge of the operation, connected electrical load, measurement signals, cable assignment and fuse protection of the connected devices and machines and the relevant safety regulations is required.

Start-up of the 700 P electronics module may therefore only be performed by qualified and authorized electricians.

Incorrectly connected systems can be damaged, possibly irreparably, or cause faults in other equipment when they are switched on or in operation. Ensure that the measuring and control cables are not confused or make contact with one another. Never connect or disconnect any cables to which voltage is applied.

*Warning!*

**Risk of injury or damage to the device!**

When connecting the 700 P electronics module to the power supply, a 6A back-up fuse must be used in the main supply line.

After the 700 P electronics module and the DEPOLOX® Pool E or DEPOLOX® 5 E flow cell are installed, you can perform the first commissioning. See also the corresponding instruction manuals of the flow cells and sensors.

*Requirements*     Please check if the following conditions are met:

- 700 P electronics module electrically wired according to the wiring diagram (circuit diagram).
- Housing cover of the 700 P electronics module fitted.
- DEPOLOX® Pool E or DEPOLOX® 5 E flow cell installed.
- Sample water inlet and outlet connected.
- Flow cell equipped with sensors.
- CAN connection cable installed.

Proceed as follows:

| Ser. No. | Procedure | Completed |
|---|---|---|
| 1 | Switch on power supply. | |
| 2 | Perform initial configuration:<br><br>• Set "MANUAL" mode<br>• Select the language<br>• Set the date and time.<br>• Enter the system name<br>• Select measurements | |
| | **$Cl_2$++ measurement** | |
| 3 | Set the controller mode. | |
| 4 | Set control output for $Cl_2$, if necessary set positioner running time "Ty" or "max.pulses/min" | |
| 5 | Calibrate "Ym" on positioner with feedback | |
| 6 | Check setpoint for $Cl_2$ control, change if necessary (only for $Cl_2$ single feedback closed loop control). | |
| 7 | Adapt values for "Xp" and "Tn" to control loop.<br><br>**❗ *Please note***<br><br>These values may be optimized later by adaption or manually. | |
| 8 | If a dosing pump is used, check the "Tp" parameter and adapt to the pump, if necessary | |
| 9 | If ECONOMIC mode used, check "Cl2 parameter ECO", change if necessary. | |
| 10 | Check limit values for $Cl_2$ ("min" and "max"), adjust if necessary | |

| Ser. No. | Procedure | Completed |
|---|---|---|
| 11 | For CEDOX: <br> Check min. setpoint and max. setpoint, change if necessary. | |
| 12 | Check setpoint for $Cl_2$ control, adjust, if necessary | |
| 13 | Set the peak chlorination parameters, if required. | |
| | **pH measurement (if available)** | |
| 14 | Set the dosing output for pH, if necessary, set positioner running time "Ty", "Xsh" or "max. pulses/min". | |
| 15 | Set the control direction (for pumps or analog output). | |
| 16 | Check the setpoint for pH control, adjust if necessary | |
| 17 | Adapt the values for "Xp" and "Tn" to the control loop, if necessary optimize in small steps. | |
| 18 | If a dosing pump is used, check the "Tp" parameter and adapt to the pump, if necessary | |
| 19 | Check the limit values for pH ("min" and "max"), adjust if necessary. | |
| | **Flocculation control (if used)** | |
| 20 | Check the limit values for flocculation control "Flocc. (min)" and "Flocc. (max)". <br><br> ⓘ **Please note** <br><br> These values must be obtained from the flocculant manufacturer or are mentioned on the flocculant tank. | |
| 21 | Check the measurement range for pH, adjust if necessary. | |
| | **ORP measurement (if available)** | |
| 22 | For controller mode CEDOX: <br> Set mV setpoint, if necessary set mV setpoint$_{ECO}$, check $X_{sh}$, change if necessary. <br> Check the mV delay time, adjust if necessary. | |
| 23 | Check the limit values for ORP ("min" and "max"), adjust if necessary. | |
| 24 | Check the measurement range for ORP, adjust if necessary. | |
| | **Cl-N measurement (if available)** | |
| 25 | Check Cl-N parameter "max. comb. chlor", adjust if necessary. | |
| 26 | Check the "min ON" and "min OFF" times of the enable contact for activated powder carbon dosing systems or UV systems, adjust if necessary. | |
| 27 | Check the limit values for Cl-N ("min" and "max"), adjust if necessary. | |
| 28 | Check the measurement range for Cl-N, adjust if necessary. | |

| Ser. No. | Procedure | Completed |
|---|---|---|
| | **Conductivity measurement (if available)** | |
| 29 | Set the dosing output for conductivity, set "max pulses/min" if necessary. | |
| 30 | Set the control direction | |
| 31 | Check the setpoint for conductivity control, adjust if necessary. | |
| 32 | Adapt the value for "Xp" to the control loop, if necessary optimize in small steps. | |
| 33 | If a dosing pump is used, check the "Tp" parameter and adapt to the pump, if necessary. | |
| 34 | Check the limit values for conductivity ("min" and "max"), adjust if necessary. | |
| 35 | Check the measurement range for conductivity, adjust if necessary. | |
| 36 | Check the unit of the "NaCl display", change if necessary. | |

## 5.7 Shutting down

*Danger!*

**Risk of injury or death!**

External voltages may be connected even with the operating voltage switched off.

To shut down, proceed as follows:

**1** Disconnect the 700 P electronics module from the power supply.

**2** Switch off the DEPOLOX® Pool E or DEPOLOX® 5 E flow cell and sensors. See the corresponding instruction manuals of the flow cells and sensors.

## 5.8 Renewed start up

Refer to Chapter 5.6 "Commissioning".

# 6. Operation

## 6.1    Display and control elements

The color graphic display with resistive touch panel is the display and control element. It is used by means of direct entry on the display or by touching using your finger or a pen (PDA pen) for touchscreens. As soon as you touch an area on the display, the 700 P electronics module reacts and switches to subordinate views or operating menus.

Image 1   Main screen (example)

A   Name of the Pool Management system
B   Current pool water temperature
C   Menu field Free chlorine measurement with current measuring value
D   Menu field Chlorine adjustment with display of operation mode and limit values
E   Menu field pH-measurement with current measuring value
F   Menu field pH-control with display of operation mode and limit value
G   Menu field System
H   Symbol for error message with number to show the number of error messages
I   Menu field ORP measurement with current measuring value
J   Password symbol
K   Menu field ORP control with display of limit values
L   Current date and time
M   Menu field Inputs and outputs
N   Menu field Conductivity measurement with current measuring value
O   Menu field Conductivity control with display of operation mode and limit values
P   Menu field Total chlorine measurement with current measuring value (alternative combined chlorine with current calculated value)
Q   Menu field Total chlorine control with display of operation mode and limit values

| Display/ symbols | Explanation |
|---|---|
| Cl2 free **0.41** mg/l 25.8 °C | Every available main measurement is displayed in a specific display area (menu field) in the display.<br><br>The menu field shows:<br><br>• the sensor type (e.g. Cl2 free)<br>• the unit (e.g. mg/l)<br>• the temperature and unit (for the chlorine value only) |
| →0,33 | Operating mode Auto with setpoint display |
| (hand symbol) | Operation mode Manual |
| 0% | Displays the dosing output of the controller as a percentage<br>Arrow up = increase output to reach setpoint<br>Arrow down = decrease output to reach setpoint |
| Max 0.98 / 0.60 Min 0.30 / 0.20 | Displays the limit values Max I and Max II as well as Min I and Min II |
| < | Switch to the previous screen |
| > | Switch to the next screen |
| (house symbol) | Home key (main view) |
| ⚠² | Button to open the message window, e.g. for error messages, exceedance of limit values, etc. |
| DEPOLOX Pool E 700 P | System bar with customer-specific configurable system names.<br><br>Depending on the status of the messages, it appears in a different color:<br>• white-blue: all OK<br>• yellow-green: warnings present<br>• red:      Faults |
| 10/25/2016 11:31:34 AM | Displays the date and time |

| Display/ symbols | Explanation |
|---|---|
| 🔓 | User has logged in with password<br>To protect against unauthorized or accidental incorrect operation, the 700 P electronics module works with two password levels:<br>• System password allows full access to all setting options and display of all menus<br>• Calibration password allows access for calibration purposes and to display all menus<br>The password consists of multi-digit customer-specific number combinations with a minimum of 3 and a maximum of 24 digits. |
| ECO | ECO mode active |
| STOP | Controller STOP |
| = | Controller output constant |
| 100% | Controller 100 % |
| ⌀ | Pos. motor calibration active |
| A | Automatic adaption active |
| ∿ | Peak chlorination active |
| x2 | Double controller output |

**Explanation of the buttons:**

| Input field | For text/value entry. |
|---|---|
| Selection field | If a selection is listed. |
| Option field | If an option can be selected. |

**General messages:**

| Invalid entry | Incorrect entry, is ignored by the system |
|---|---|

## 6.2    Menus

The following menus are available:

- free chlorine
- pH
- ORP
- Total chlorine or optional combined chlorine
- Conductivity
- Inputs / outputs
- System

The layout of the measurement and control menus for Free chlorine, pH, ORP, Total chlorine or Optional combined chlorine and Conductivity is the same. If all sensors are connected, the following basic message is depicted on the 700 P electronics module:

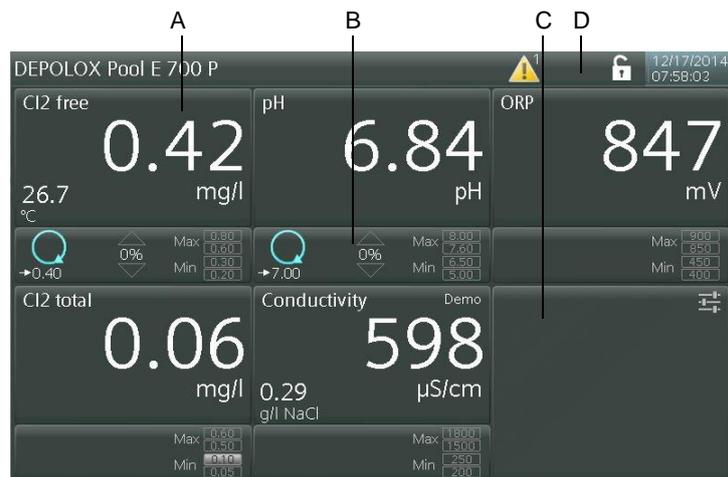

*A   Menu field Measurement with current measuring value*
*B   Menu field Control with display of operation mode and limit values*
*C   Menu field Inputs and outputs*
*D   Menu field System*

From the basic screen, you can call up the measurements, controls and system settings.

### 6.2.1　Measurements

The measurement is taken from the example "Free chlorine".

Proceed as follows:

**1** Call up the basic screen.

**2** Press the menu field „Measurement with current measuring value (Cl2 free)".

**3** The screen changes to the menu "Cl2 free - Measurement".

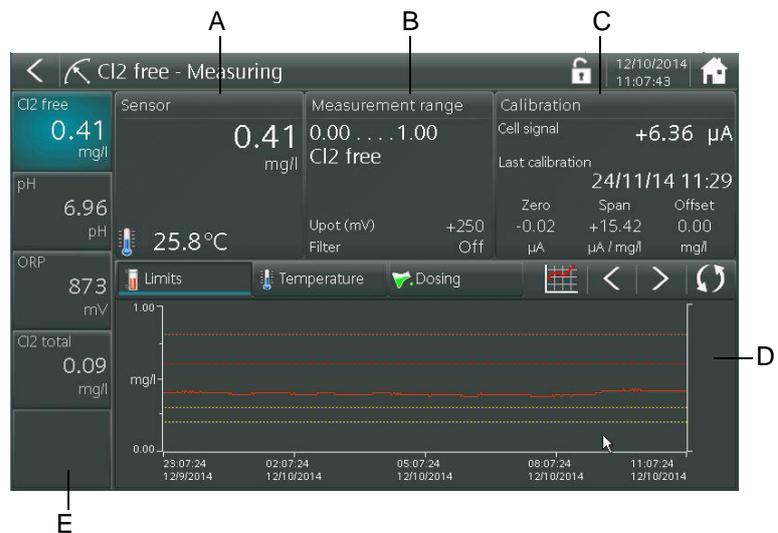

This display gives the option to switch to subordinate menu fields:

- Sensor (A)
- Measurement range (B)
- Calibration (C)
- Trend analysis (D)
  - Limit values
  - Temperature
  - Dosing
  - Trend diagram
  - Scroll forward or back
  - Update
- Parameter keys for quick selection (E)

**4** Select the corresponding menu fields.

**Selecting the menu fields**

The following menu fields can be selected:

**Menu field Sensor**

The menu field „Sensor" shows the current measuring value for chlorine with unit. The current sample water temperature is displayed underneath with a temperature symbol.

**1**  Press the menu field „Sensor".

**2**  The screen changes to the menu view "Diagnosis - module Cl2 free". Only one view is possible. For explanation of screen, see "Diagnostics" on page 111.

**Menu field Measurement range**

The menu field „Measurement range" shows the currently set measurement range for chlorine and the selected sensor type. The selected potential voltage Upot and the set measuring value filter are also shown.

**1**  Press the menu field „Measurement range".

**2**  The screen switches to the menu "Cl2 free - Measurement range".

**3**  Select the desired input fields. The selection option is shown or the keypad appears.

**4**  Select or define the values.

*Please note*

Enter the corresponding values depending on the desired measurement.

*Cl2 free-Measurement*

| Measurement range | 0 to 1 mg/l to 0 to 20 mg/l |
|---|---|
| Unit | mg/l, ppm |
| Sensor type | Cl2 free, freely definable |
| Sensor type def. | Freely programmable sensor type which can be selected in the menu Sensor type. Example: Bromine |
| Measuring value filter | Off, low, middle, strong |
| Upot | 0 to 1000 mV |
| µA measurement range | 10, 100, 1000 µA |
| Select temp. | Cl2 free, A&C Board intern, Off |

*pH Measurement*

| Measurement range | |
|---|---|
| Start | 0.00 to 6.00 pH |
| End | 8.00 to 14.00 pH |
| Measuring value filter | Off, low, middle, strong |

*ORP measurement*

| Measurement range | |
|---|---|
| Start | 000 to 700 mV |
| End | 300 to 1000 mV |
| Measuring value filter | Off, low, middle, strong |

*Cl2 total measurement*

| Measurement range | 1.00/2.00/5.00/10.0 mg/l |
|---|---|
| Unit | mg/l/ppm |
| Sensor type | Cl2 total, Cl2 combined |
| Measuring value filter | Off, low, middle, strong |

*Conductivity measurement*

| Measurement range | 500 µS/cm / 2500 µS/cm / 10,00 mS/cm / 20,0 mS/cm / 50,0 mS/cm / 100,0 mS/cm / 200,0 mS/cm / 300 mS/cm |
|---|---|
| Unit | µS/cm / mS/cm |
| Measuring value filter | Off, low, middle, strong |
| Reference temperature | 20/25°C |
| Display | Off/NaCl(g/l)/NaCl(%)/TDS |
| Factor TDS | 0.40 to 1.00 |

**Menu field Calibration**

The menu field „Calibration" shows the current sensor signal of the chlorine measurement cell in µA, the date of the last calibration and the µA values saved at the last calibration for Zero point and Span.

**1** Press the menu field „Calibration".

**2** The screen switches to the settings menu "Cl2 free - Calibration".

**3** Select and define the desired control panels for calibrating the chlorine sensor. The keypad appears. See also Chapter 6.3 "Calibration".
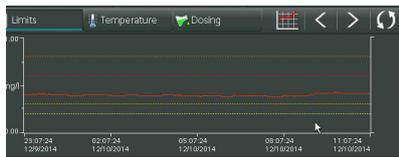

**Menu field Trend analysis**

The menu field „Trend analysis" shows the measuring value sequence of the free chlorine measurement over the past hours/days.

The following buttons can be opened in the menu field Trend analysis:
- Limit values button

  The button shows the limit values in the $Cl_2$ trend diagram.

- Temperature button

  The button shows the temperature in the $Cl_2$ trend diagram.
- Dosing button

  The button shows the dosing performance process in the $Cl_2$ trend diagram.

- Scroll forward or back button

  Button to scroll forward or back in the trend diagram.
  With a sample rate of two minutes, the values can be traced approx. 60 days.

- Update button

  Button to switch to the current time/day in the trend diagram.

- Trend diagram button

  The button shows the measuring value sequence in the past and the temperature, dosing quantity and limit values as an option.

Image 2   Menu view example Cl₂ free

A   "Limit values" button to display the limit values in the Trend diagram
B   "Temperature" button to display the temperature course in the Trend diagram
C   "Dosing" button to display the dosing performance process in the trend diagram
D   Condensing of the trend screen by 12 hours, maximal four days is possible into one screen
E   Expansion of the time grid of the trend screen, max. 1.5 hours into one screen is possible
F   Move ruler to the left
G   Move ruler to the right
H   Scroll back through trend diagram
I   Scroll forward through trend diagram
J   Jump back to current time with current timescale
K   Ruler to move.
    The measuring values saved on the ruler are displayed as a numerical value in the table
    under the diagram
L   Scaling of measurement range
M   Scaling of the dosing performance or temperature

### 6.2.2 Control

Controls are set from the example "Free chlorine".

Proceed as follows:

**1** Call up the basic screen.

**2** Press the menu field „Free chlorine control with display of operation mode and limit values".

**3** The screen changes to the settings menu "Cl2 free - Control".

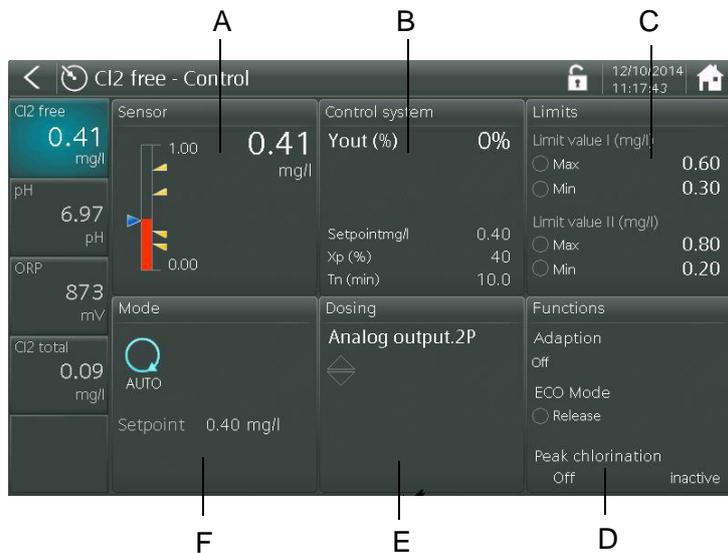

This screen offers the option to switch to subordinate menus.

- Sensor (A)
- Control (B)
- Limit values (C)
- Functions (D)
- Dosing (E)
- Operation mode (F)

**4** Select the corresponding menu fields.

**Selecting the menu fields**

The following menu fields can be selected:
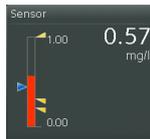

**Menu field Sensor**

The menu field „Sensor" shows the current measured value with display of bargraph, the current setpoint (blue arrow) and the set minimum and maximum limit values (yellow arrows).
Only one view is possible.

**Menu field Control**

1  Press the menu field „Control".

2  The display switches to the module-specific screen for the controller settings.

   Depending on the module type selected, the different settings menus are displayed.

   In this example, the settings menus of "Cl2 free - Controller setting" are displayed.

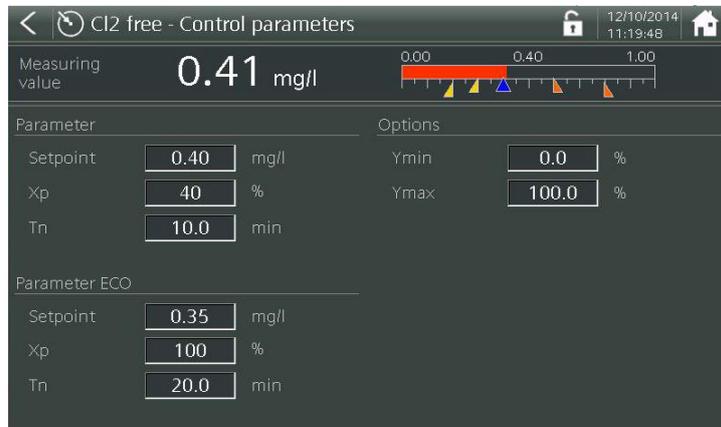

3  Select the desired input fields. The keypad appears.

4  Perform the controller settings.

The following controller settings can be realized:

*Cl2 free Controller setting*

| Parameter | |
|---|---|
| Setpoint | 0.10 mg/l to end of the measurement range |
| Xp | 0001 to 1000 % |
| Tn | 000.0 to 100.0 min |
| Hysteresis | 0.01 to 0.5 mg/l |
| min. ON | for dosing contact: 1 to 59 min. |

| ECO parameter | |
|---|---|
| $Setpoint_{ECO}$ | 0.10 mg/l to end of the measurement range |
| $Xp_{ECO}$ | 0001 to 1000 % |
| $Tn_{ECO}$ | 000.0 to 100.0 min |

| Control range options | |
|---|---|
| Ymin | 0.0 to 100.0 % |
| Ymax | 0.0 to 100.0 % |

*pH controller setting*

| Parameter | |
|---|---|
| Setpoint | within measurement range |
| Xp | 0.0 to 100.0 % |
| Tn | 000.0 to 100.0 min. |

| Options Control range | |
|---|---|
| Ymin | 0.0 to 100.0 % |
| Ymax | 0.0 to 100.0 % |

*Cl total - controller setting*

| Parameter | |
|-----------|---|
| Setpoint | within measurement range |
| Xp | 0001 to 1000 % |
| Tn | 000.0 to 100.0 min. |

*Conductivity-controller setting*

| Parameter | |
|-----------|---|
| Setpoint | within measurement range |
| Xp | 0001 to 1000 % |
| Tn | 000.0 to 100.0 min. |

**Menu field Limit values**

**1** Press the menu field „Limit values".

**2** The screen changes to the menu "Cl2 free – Limit values".

In this example, the settings menus are displayed for the limit values of Cl2 free Measurement.
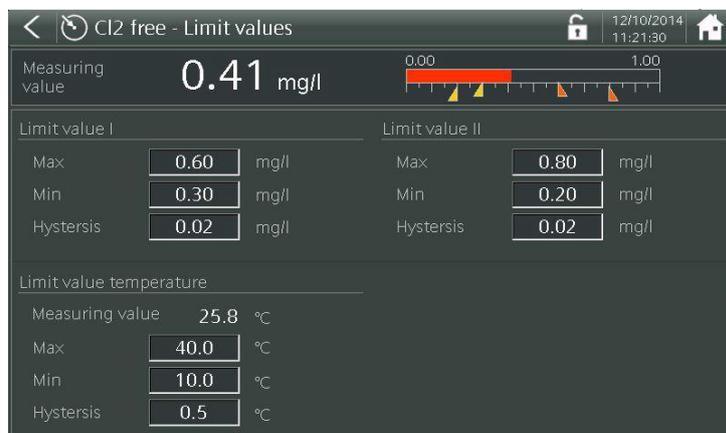

**3** Select the desired input fields. The keypad appears.

**4** Set the limit values.

The following limit value settings can be realized:

Two limit value channels (I and II) with a Min. and Max. setting value are available for each module. Each limit value channel also has a switching hysteresis that can be set.

| Limit value I | |
|---|---|
| Max | within measurement range |
| Min | within measurement range |
| Hysteresis | Dependent on the measuring range 0.01 to 0.25 / 00.1 to 02.5 |

| Limit value II | |
|---|---|
| Max | within measurement range |
| Min | within measurement range |
| Hysteresis | Dependent on the measuring range 0.01 to 0.25 / 00.1 to 02.5 |
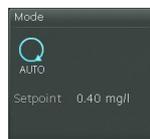

**Menu field Operation mode**

1   Press the menu field „Mode".

2   The screen changes to the menu "Cl2 free - Mode".

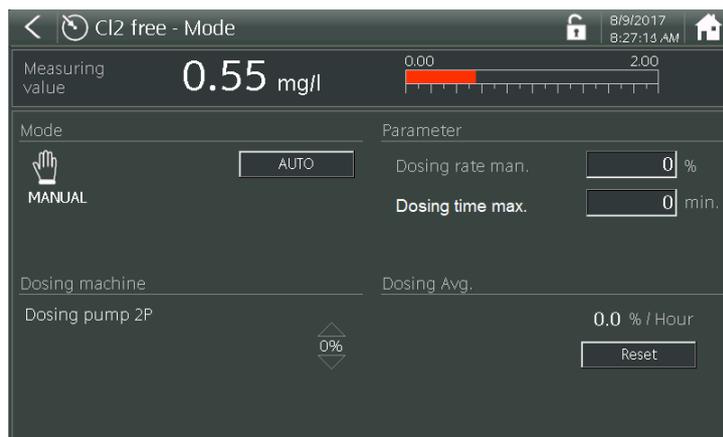

3   The selection option is shown or the keypad appears.

4   Press the "MANUAL" or "AUTO" button and the button changes from "MANUAL" to "AUTO" or from "AUTO" to "MAN-UAL".

**5** After the button has been pressed, a prompt appears "Do you want to switch to MANUAL or AUTO mode?".

- Confirm with "Yes" to change the operation mode.
- Select "No" to cancel the process.

**6** In "Manual mode," it is possible to set a manual dosing rate for the controller outputs (not with dosing contact). The following settings are possible:

| Dosing rate man. | 0...100 %/open/closed |
|---|---|

Furthermore, a runtime limitation can be set for manual dosing (not with positioner). Dosing is switched off after expiry of this time. If the running time is set to 00:00, it is inactive and manual dosing is in continuous mode.

| Dosing time max. | 0...1440 min. |
|---|---|

**7** When switching to Automatic, the feed delay is started. Select the "Start now!" button to stop the delay and start dosing immediately.

**8** When the controller is activated, there is also the option to change the setpoint and reset the dosing average shown.

*Please note*

For each controller output, e.g. $Cl_2$, pH the operation mode must be set separately!
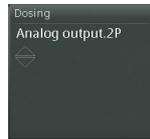

**Menu field Dosing**

**1** Press the menu field „Dosing".

**2** The screen changes to the menu "Cl2 - Dosing". This setting menu gives the option to adapt the dosing output to the on-site conditions.

In this example, the menu of "Cl2 free - Dosing" is displayed.
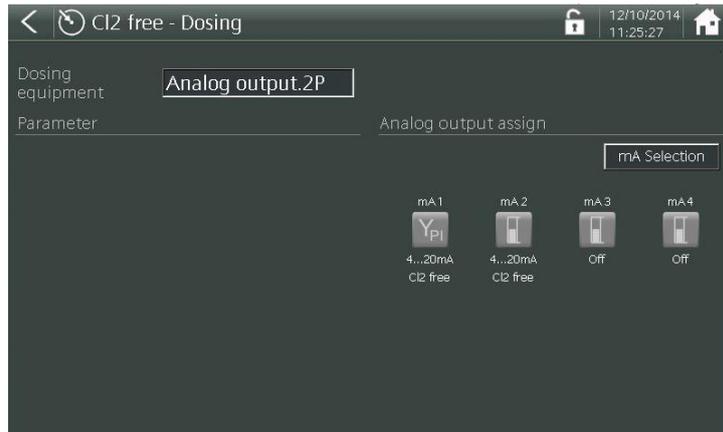

**3** Select the desired input fields or symbols. The selection option is shown or the keypad appears.

**4** Configure the settings.

Choose from the following options:

*Cl₂ free dosing*

| Cl₂ dosing | |
|---|---|
| Dosing output | • El. Positioner w.Ym<br>• El. Positioner wo.Ym<br>• Dosing pump 2P<br>• Solenoid pump 2P<br>• Analog output 2P<br>• Dosing contact for Cl₂-Dosing with hysteresis and min. switch on time (e.g. for OSEC-A) |

| Parameter | |
|---|---|
| • Ty<br>• Tp<br>• Ym calibration<br>• Ym calibration 0. 100 %<br>• max. pulse/min | • 10 to 180 s<br>• 10 to 180 s<br>• Auto<br>• Manual calibration<br><br>• 100/120/140/160/180 |
| Min On | 0 min to 10 h |
| Min Off | 0 min to 10 h |

*pH Dosing*

| Dosing output | • El. Positioner wo.Ym |
|---|---|
| | • Dosing pump 2P |
| | • Dosing pump 3P |
| | • Solenoid pump 2P |
| | • Solenoid pump 3P |
| | • Analog output 2P |
| | • Analog output 3P |
| | • Dosing contact |

| Parameter | |
|---|---|
| • Control direction | • Acid / Alkali |
| • Tp | • 10 to 180 s |
| • Xsh | • 1.0 to 5.0 % |
| • Type | • 10 to 180 s |
| • max. pulse/min | • 100/120/140/160/180 |

*Cl-N Dosing*

| Cl-N Dosing | |
|---|---|
| Dosing output | • Dosing output |
| | • Dosing pump 2P |
| | • Solenoid pump 2P |
| | • Analog output 2P |

| Parameter | |
|---|---|
| Min On | 0 min to 10 h |
| Min Off | 0 min to 10 h |
| Tp | 10 to 180 s |
| max. pulse/min | 100/120/140/160/180 |

*Conductivity Dosing*

| Conductivity Dosing | |
|---|---|
| Dosing output | • Dosing pump 2P<br>• Solenoid pump 2P<br>• Analog output 2P<br>• Dosing output |

| Parameter | |
|---|---|
| Tp | 10 to 180 s |
| max. pulse/min | 100/120/140/160/180 |
| Min On | 0 min to 10 h |
| Min Off | 0 min to 10 h |

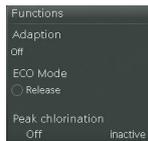

**Menu field Functions**

**1** Press the menu field „Functions".

**2** The screen changes to the settings menu "Cl2 free - Functions".

From this screen, you can switch to Adaption Peak chlorination or ECO mode.

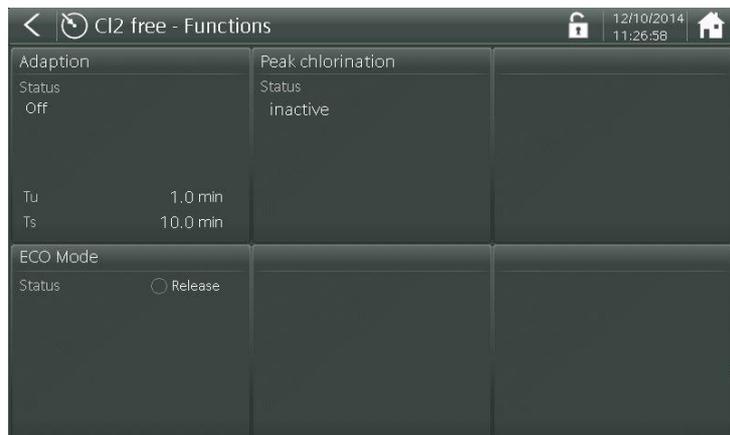

**3** Select the corresponding settings.

The following settings can be realized:

*Adaption*    **1**  Press the menu field „Adaption".

**2**  The screen changes to the menu "Cl2 free - Adaption"

**3**  Press the "Start" button and the automatic adaptions process starts, see Chapter 3.4.10 "Adaption (only applies to free Cl2)".

**4**  Under "Parameter", the last defined loop times Tu and Ts are displayed.
Values for Tu and Ts can also be entered directly.

*Peak chlorination*   **1** Press the menu field "Peak chlorination".

**2** The screen changes to the menu „Peak chlorination".

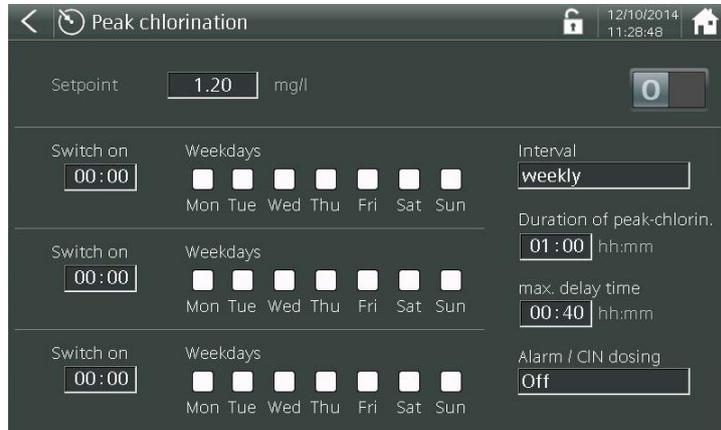

The following settings can be realized:

• To activate the peak chlorination function, set the Peak chlori-
  nation switch to "I".
• To deactivate the peak chlorination function, set the switch to
  "0".
• Three timers are available for which the switch-on time and
  weekday can be freely selected.
  All or specific week days can be selected.
  The interval selected can be weekly, every two weeks, three
  weeks or four weeks.
• Max. delay describes the maximum time allowed after peak
  chlorination has started until the peak chlorination setpoint is
  reached.
• The selection field "Alarm/CIN dosing" is used to disable
  alarms and the total chlorine controller during the peak chlori-
  nation. This should help limit the number of malfunctions.
• From the "Setpoint" input field, you can define the desired
  peak chlorination value to be reached.

*ECO mode*

**1** Press the menu field "ECO mode".

**2** The screen changes to the settings menu „ECONOMIC mode".

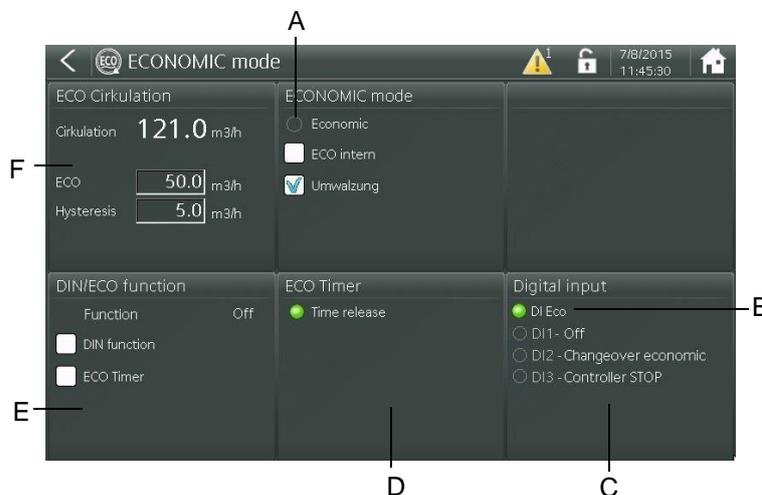

*A    Lights up with ECONOMIC mode*
*B    Lights up with active DI contact*
*C    Digital inputs*
*D    ECO Timer*
*E    DIN/ECO function*
*F    ECO circulation settings*

The following settings are available:

*ECO circulation*    If "Circulation" is selected in the „ECO mode" settings menu, the "ECO circulation" settings menu opens. Additional settings can be specified in this settings menu. The circulation signal is configured in the analog input settings menu and displayed accordingly. The ECO value and the hysteresis at which the 700 P electronics module switches to „ECO mode" are set in the „ECO circulation" settings menu.

| ECO Timer | Selecting ECO Timer allows switching to ECO mode via the internal timer (ECO Timer). |
|-----------|-------------------------------------------------------------------------------------|
| Circulation | Selecting circulation allows for the automatic changeover in ECO mode if the value drops below the "ECO" limit value set in ECO circulation. |

If both functions are selected, both criteria are considered for the ECO switchover.

*DIN/ECO function*

| Function | Indicates whether the DIN function is active (green). |
|---|---|
| DIN/ECO contact | Indicates whether the DIN/ECO function is active (green). |
| DIN function | Selecting the DIN function activates monitoring of the DIN limit values and switches the DIN relay on if all values are within the DIN limits. If a selection is activated at the same time in the ECO Mode menu field (e.g. ECO Timer), the DIN function is also considered when switching to ECO mode. |
| ECO contact timer | Selecting the ECO contact timer switches the DIN relay regardless of the set time releases of the internal timer. If DIN function and ECO Contact Timer are activated, both functions are considered when switching the DIN relay. |

If you select the "DIN Function," then DIN functionality is enabled, see "DIN/ECO contact" on page 90. Proceed as follows: Press the "DIN/ECO function" settings menu to open the "DIN contact" settings menu. The DIN parameters are entered in this settings menu.

*Digital inputs*

| Digital inputs | Displays the current switching function of the digital inputs. Open contact = active (red) |
|---|---|

The DEPOLOX® Pool E 700 P can be switched to ECO mode with different functions. One or several functions can be selected at the same time. All conditions must be met at all times for the electronics module to switch to ECO mode. When using a digital input for the ECO switchover, this input always has priority regardless of the other switching condition.

*ECO Timer*

| Time release | Indicates whether Timer Release is active (green). |
|---|---|

If "ECO Timer" is selected in the settings menu for "ECO Mode," ECO mode is triggered with an internal, programmable timer (see diagram below). Proceed as follows: Press the "ECO Timer" settings menu to open the "Time release" settings menu. In this settings menu, you can program up to three different on-duty and off-duty cycles and the corresponding days of the week.

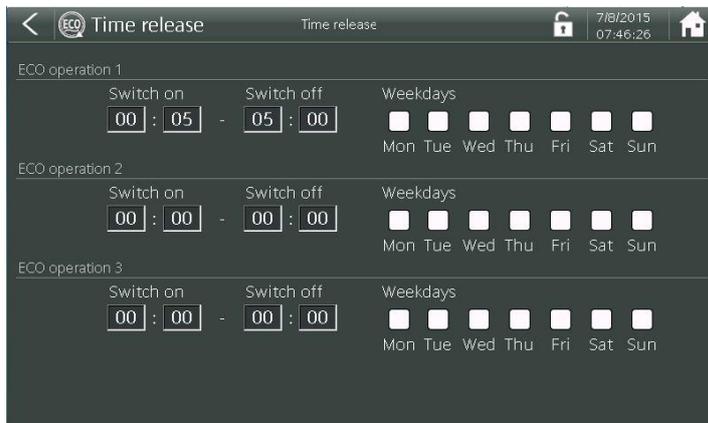

If you select both functions "ECO Timer" and "Circulation," both conditions must be met for the 700 P electronics module to switch to "ECO Mode." If the "DIN function" is selected in the "DIN/ECO function" settings menu, all DIN conditions must be met additionally for switching to ECO mode.

*DIN/ECO functions*

**DIN function**
Selecting the "DIN function" enables the DIN functionality (see "DIN/ECO contact" on page 90). Press the "DIN/ECO function" settings menu to open the "DIN contact" settings menu. The DIN parameters are entered in this settings menu.

**ECO Timer**
If "ECO Timer" is selected, the DIN relay is reconfigured to an ECO relay. Thus, the ECO timer function is output to the ECO relay which can be used for further external evaluations.

If both features are enabled, both conditions must be met as well for switching the DIN/ECO relay.

### 6.2.3    Inputs / outputs

**1**  Call up the basic screen.

**2**  Press the menu field "Inputs / outputs"

**3**  The screen changes to the menu "Inputs / outputs".

| < ⇄ Inputs / outputs | | 🔓 7/8/2015 10:06:47 🏠 |
|---|---|---|
| Limit contacts | Digital input | Flocculation |
| ○ GK 1<br>○ GK 2<br>○ GK 3<br>○ GK 4<br>○ GK 5<br>○ GK 6<br>○ GK 7<br>○ GK 8 | ○ Flow sample water<br>○ DI1 - Off<br>○ DI2 - Controller STOP<br>○ DI3 - Changeover economic | Flocculation          Off |
| DIN function | Analog outputs | Analog inputs |
| 🟢 DIN/ECO contact<br><br>Cl2 free        0.30 -   0.60 mg/l<br>pH              6.50 -   7.60 pH<br>ORP                     >    750 mV<br>Cl2 combined       <   0.20 mg/l | mA output 1        4...20mA<br>mA output 2              Off<br>mA output 3              Off<br>mA output 4              Off | Umwalzung       121.0 m3/h |

The following settings can be adjusted:

*Limit contacts*  **1**  Press the menu field „Limit contacts".

**2**  The screen changes to the settings menu „Limit contacts."

Up to a maximum of 8 limit contacts can now be configured. To do so, press the relevant contact.

| < ⊥ Limit contacts | | 🔓 12/10/2014 11:33:09 🏠 |
|---|---|---|
| Contact 1<br>○ GK 1 | | Contact 5<br>○ GK 5 |
| Contact 2<br>○ GK 2 | | Contact 6<br>○ GK 6 |
| Contact 3<br>○ GK 3 | | Contact 7<br>○ GK 7 |
| Contact 4<br>○ GK 4 | | Contact 8<br>○ GK 8 |

**3**  Select the desired button (e.g. Contact 1) and realize the settings.
Each limit contact can be configured to one or more causes, e.g. common alarms. Where changes are made, confirm by selecting the OK button.

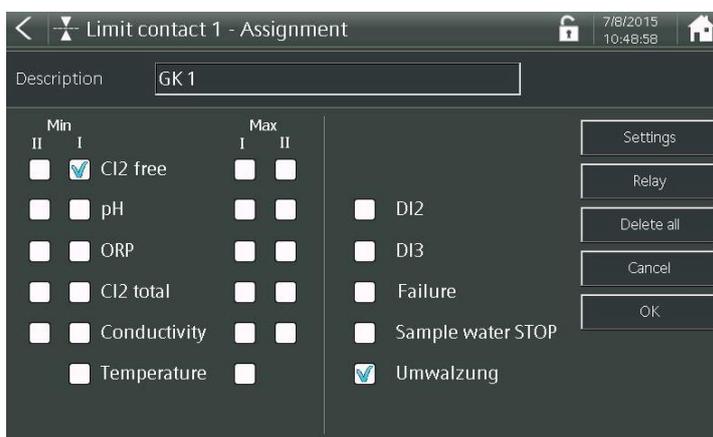

**4**  Press the „Settings „button.

**5**  The screen changes to the selected limit contact (in this example, Limit contact 1). Acknowledgment concept see Chapter 3.4.5 "Limit contacts".

This screen is used to define the type or switching properties of the limit contact.

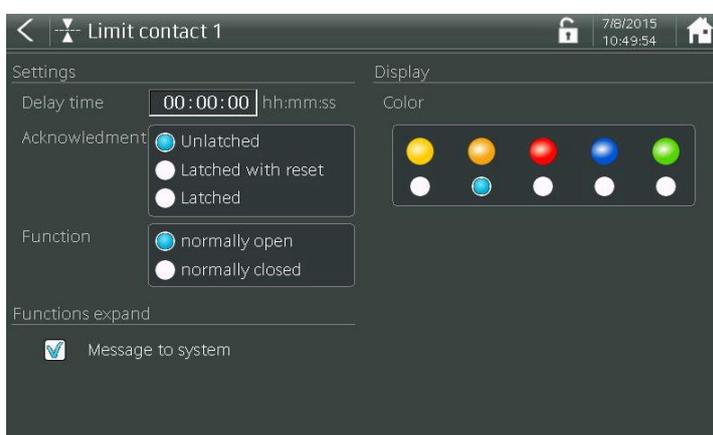

**6**  Press the "Relay" button, then you can assign relays to the limit contacts.

Use the above screen to select the switching properties, delay time and color signalling for the limit contact.

When the option "Message to message system" is activated, a message is generated in the message system parallel to the limit contact. Where the limit contact can be acknowledged, the color of the system bar and LED glow stick changes to red, or to yellow if not acknowledged.

*DIN/ECO contact*

**1** Press the menu field "DIN function".

**2** The screen changes to the menu "DIN contact".

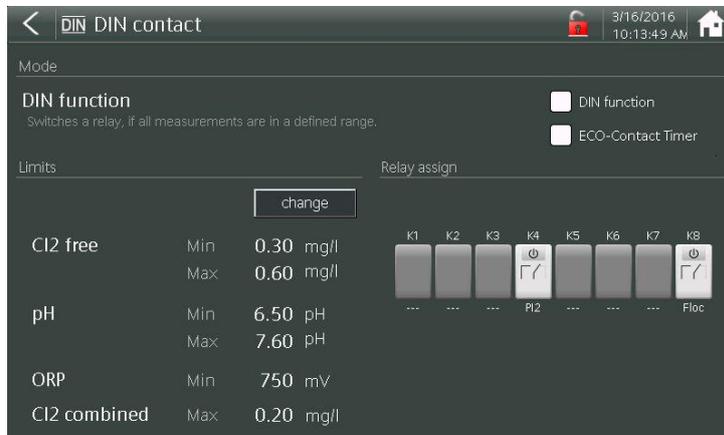

**3** Select the buttons and change the entries.

The following entries or changes can be made:

| DIN function | activates or deactivates the DIN contact |
|---|---|
| ECO-Contact Timer | activates or deactivates the ECO-Contact Timer |
| "Change" DIN limit values | Allows you to adapt the Min. and Max. limits of the measurements $Cl_2$, pH, ORP and Cl-N that are relevant to the DIN contact |

*Flocculation*    **1**  Press the menu field „Flocculation".

**2**  The screen changes to the menu „Flocculation".

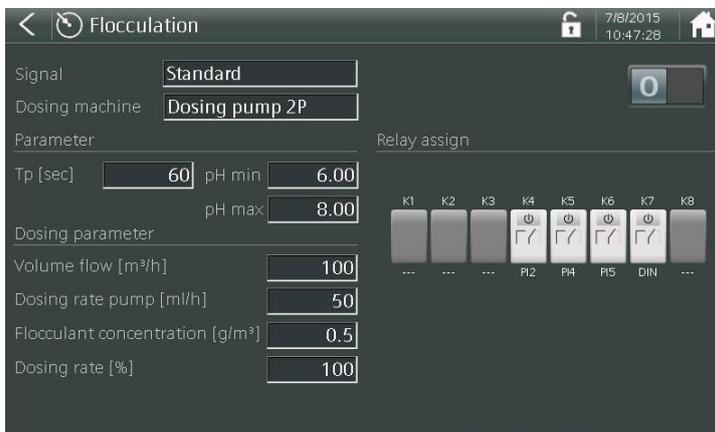

**3**  The flocculant dosing can be disabled or enabled by selecting the switch symbol.

**4**  Select the desired button and configure the settings.

The following entries or changes can be made:

| Flocculation | 0/I switches flocculation off or on |
|---|---|
| Signal | Standard<br>Default with ECO<br>circulation<br>mA input 2 |
| Actuator | Dosing pump 2P<br>Solenoid pump 2P<br>Analog output 2P |

*Parameter*

| Tp | 10 to 180 s |
|---|---|
| pH min | Within pH measurement range |
| pH max | Within pH measurement range |

*Dosing parameter*

| Volume flow | [m$^3$/h] |
|---|---|
| Dosing rate pump | ml/h |
| Flocculant concentrate | g/m$^3$ |

*Dosing output*

| Dosing rate [%] | 0 to 100 % |
|---|---|
| Dosing rate ECO | 0 to 100 % |

*Digital inputs*   **1**   Press the menu field „Digital input".

**2**   The screen changes to the menu „Digital input".

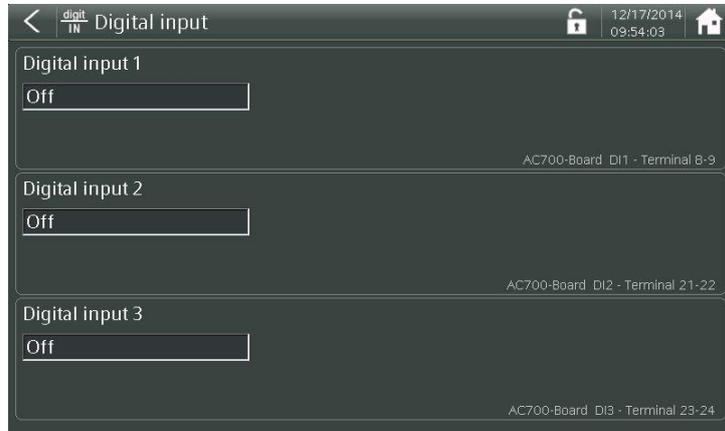

**3**   A function can be freely assigned for each digital input.

**4**   Press the desired selection field and select the function.

**5**   Depending on the function, additional option fields may appear.

The following functions are available:

| Off | No function |
|---|---|
| Controller STOP | Stop the selected controllers when input active |
| Controller constant | The selected controllers keep the dosing constant when input current. |
| mA output constant | The selected mA outputs keep the signal constant when input current |
| Controller 100 % | The selected controllers have a 100 % dosing rate when input is active. |
| Controller 2x Yout | The selected controllers have a double dosing rate. |
| Economic Switching | Changes to ECO mode when input active. |
| Limit contacts | Limit contact configuration |

*Analog outputs*    The mA outputs of the 700 P electronics module are galvanically isolated and can be configured to 0 – 5 mA, 0 – 10 mA, 0 – 20 mA oder 4 – 20 mA. Each measured value, dosing output Yout or temperature can be assigned to the mA outputs.

**1** Press the menu field „Analog outputs".

**2** The screen changes to the settings menu „Analog outputs".

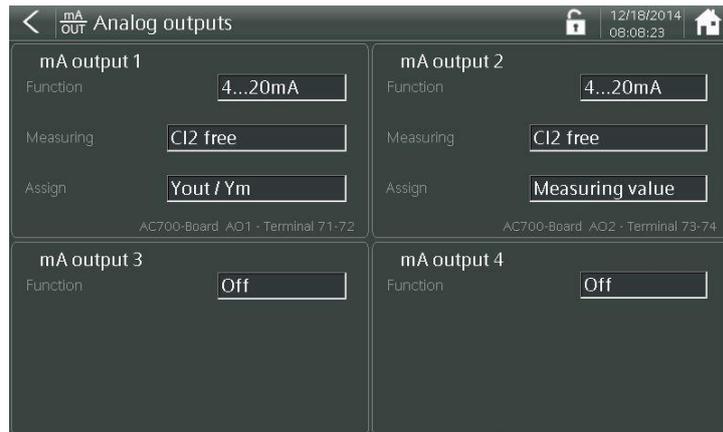

**3** mA outputs that are not used for dosing, can be freely configured.

**4** Select the output signals via the function (e.g. 4 – 20 mA).

**5** Select measuring channel (e.g. $CL_2$ free).

**6** Select the signal of the measurement channel (e.g. measuring value).

*Analog inputs*     The mA inputs of the 700 P electronics module share a ground and are potentially isolated from the rest of the electronics.

Adjustable functions:

| Function | Off, 0 - 20 mA, 4-20 mA |
|---|---|
| Start | Freely definable |
| End | Freely definable |
| Format | Measurement display 0000 / 000.0 / 00.00 |
| Unit | max. 5 digits (any combination) |
| Factor | 0.1 - 4.0 |
| Designation | max. 15 digits (any combination) |
| Controller STOP | Activation, adjustable switching threshold |

Example:
Measurement range flow meter 0-500 m³/h
Maximum possible circulation volume 250 m³/h

| => | Start: | 0 m³/h |
|---|---|---|
| | End: | 250 m³/h |
| | Format: | 0000 |
| | Unit: | m³/h |
| | Factor: | 2.0 |

Since the measuring range of the flow meter is not equal to the actual, maximum circulation volume, the factor in the example must be set to 2.0.

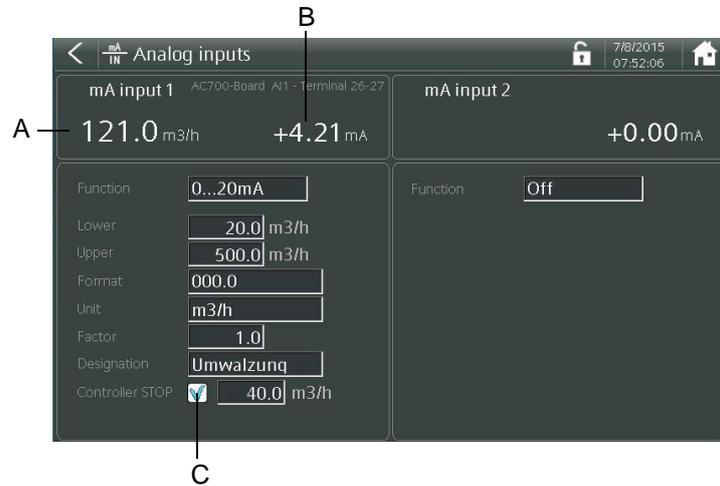

A   Value A
B   Value B
C   Activation of the controller STOP function

The mA input 1 can be used to calculate the dosing line for flocculation and for switching to ECO mode. If the "Controller STOP" function is activated and the circulation capacity drops below the set value, all enabled controllers are switched to controller STOP mode.
The mA input 2 can be used only for the dosing capacity calculation of the flocculation pump.

The display (A) is calculated as follows:

$$A = \left( B(0 - 100\%) * \frac{end - start}{100\%} + start \right) * factor$$

### 6.2.4　System

In this menu, you can configure the system settings.

**1**　Call up the basic screen.

**2**　Press the menu field „System".

**3**　The screen changes to the menu „System".

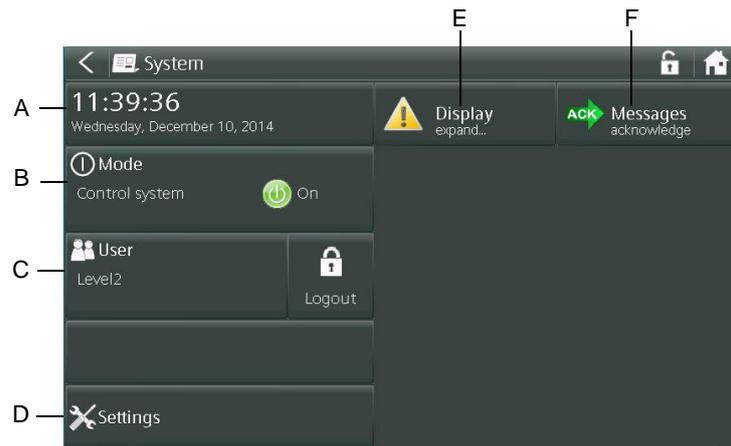

In this screen, you can call up different menu fields:

- Set time/date (A)
- Operation mode (B)
- User (C)
- Settings (D)
- Expand screen ... (E)
- Acknowledge messages (F)

**4**　Select the corresponding menu fields.

**Selecting the menu fields**

The following menu fields can be selected:

**Menu field Time/Date**

11:42:48
Wednesday, December 10, 2014

**1** Press the menu field „Time / Date".

**2** The screen changes to the settings menu „Date / Time".

**3** Press the input field for „Date / Time".

**4** The system keypad used to enter the date or time appears.

**5** Enter the date or time.

**Menu field Operation mode**

Mode
Control system          On

**1** Press the menu field „Mode".

**2** The screen changes to the settings menu „Mode".

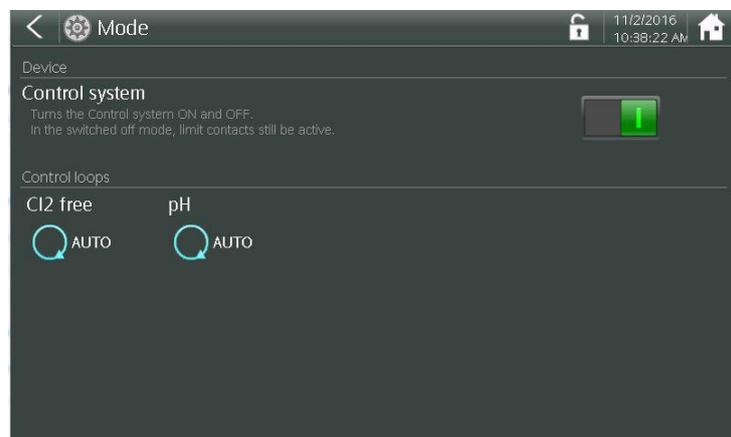

**3** The control system can be switched on or off.To do so, press the button and select (I/O).

**Menu field User**

In the „User" menu field, the individual users and passwords are defined. For the 700 P electronics module, the following levels are available:

- User level
- Level 1 - Calibration
- Level 2 - Service
- Level 3 - Reset passwords

Proceed as follows to change the levels:

**1** Press the „User" menu field.

**2** The screen changes to the settings menu „User administration". Three user levels are available.

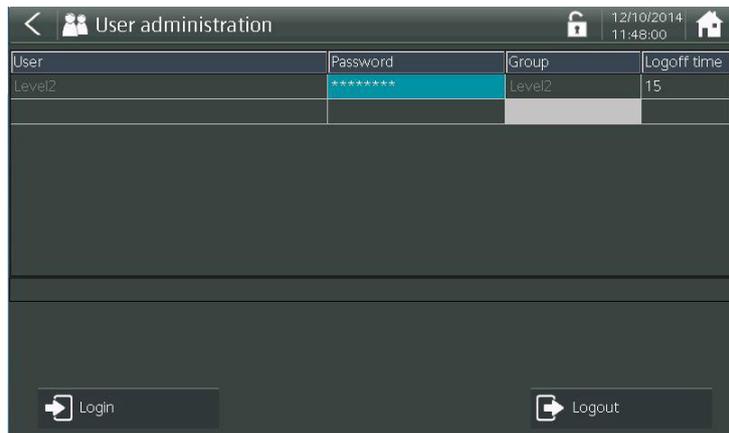

| User level | • No password<br>• Read access only<br>• Operation mode can be changed |
|---|---|
| Level 1 | • Password protection<br>• Calibration possible<br>• Includes all user level rights<br>• Acknowledge messages |
| Level 2 | • Password protection<br>• Service level<br>• Write access<br>• Includes all Level 1 rights |
| Level 3 | • Reset passwords |

In as-delivered status, the automatic logout time is set to 0 minutes, i.e. the unit is not logged out automatically. An automatic logout time of 0 to 60 minutes can be set via the customer-specific password entry in Level 1 or 2. The automatic logout time means that the unit is automatically logged out if there is no operator input at the unit. The user remains logged in continuously if the automatic logout time is set to 0 minutes.

*Please note*

The system is supplied with the default password "0000". Password protection is only activated if it is not „0000". The system is thereby always logged in to Level 2 and logging off is not possible.

- To activate the Level 2 password protection, a Level 2 password must be defined in the "Password" input field.
- To change the password, double-click on the blue input field under Password and follow the onscreen instructions.
- Password protection is only activated if it is not "0000".
- The Level 1 password is only activated if a Level 2 password has been defined that is not "0000".
- Both the Level 1 password and Level 2 password can only be changed by logging in to the relevant Login Level 1 or 2.

*Level 1 calibration password*    The calibration password allows access for calibration purposes and to display all menus.

The password consists of multi-digit customer-specific number combinations with a minimum of 3 and a maximum of 24 digits.

To change the passwords, proceed as follows:

1 Open the blue input field under Password by double-clicking on it.

2 Enter the new password.

3 Enter the password again and confirm.

*Please note*

If the customer-specific user names and passwords have been lost, these can be reset to the default factory setting. In this case, contact the manufacturer.

*Please note*

For security reasons, the user names and passwords of all user levels must be replaced with customer-specific settings!

*Level 2 service password*

The system password allows full access to all set up options and display of all menus.

**Service password:**

| Factory setting | User name | Level 2 |
|---|---|---|
| | Password | 0000 |

**Calibration password:**

| Factory setting | User name | Level 1 |
|---|---|---|
| | Password | 0001 |

**Reset passwords:**

| Factory setting | User name | Level 3 |
|---|---|---|
| | Password | 3001 |

**Menu field Settings**

From the „Settings" menu field, you can call up different buttons:

**1** Press the „Settings" menu field.

**2** The screen changes to the menu „Settings".

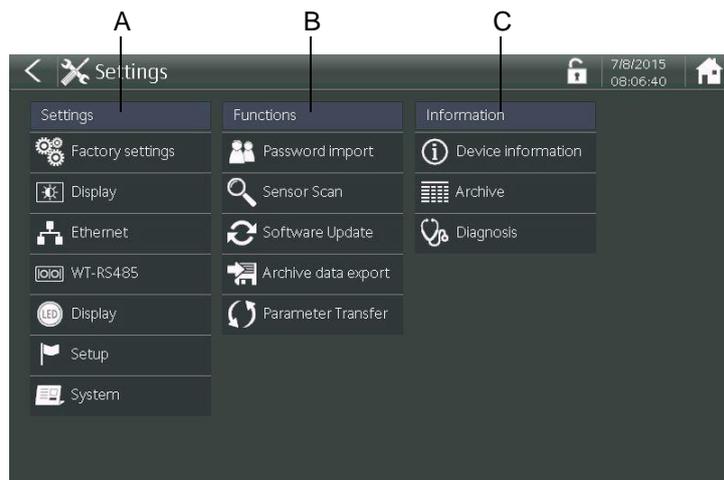

This screen allows you to switch to subordinate menus:

- Settings (A)
- Functions (B)
- Information (C)

**Menu Settings**

The following settings can be configured from the „Settings" menu:

*Factory setting*    Under Factory setting, the 700 P electronics module can be reset to the default factory delivery condition.

**1** Press the „Factory" settings button.

**2** The prompt "Do you want to restore the factory settings?" appears. Select "Yes" to reset all settings.

**3** As a precaution, another prompt appears to confirm the deletion.

*Display*    **1** Press the „Display" button.

**2** The screen changes to the menu „Display".

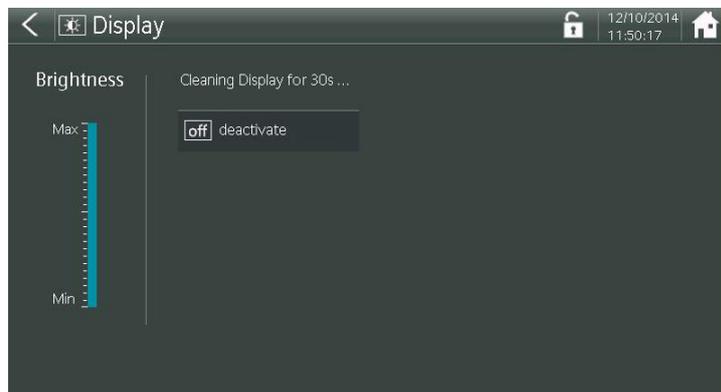

**3** Use the brightness bar graph to set the backlit lighter or darker.
To do so, press and slide the blue bar.

**4** To clean up the display during operation, press the "off/deactivate" button and the whole operating area is disabled.

*Please note*

No further operation is possible.

*Ethernet*   **1**  Press the „Ethernet" button.

**2**  The screen changes to the menu „Ethernet" status.

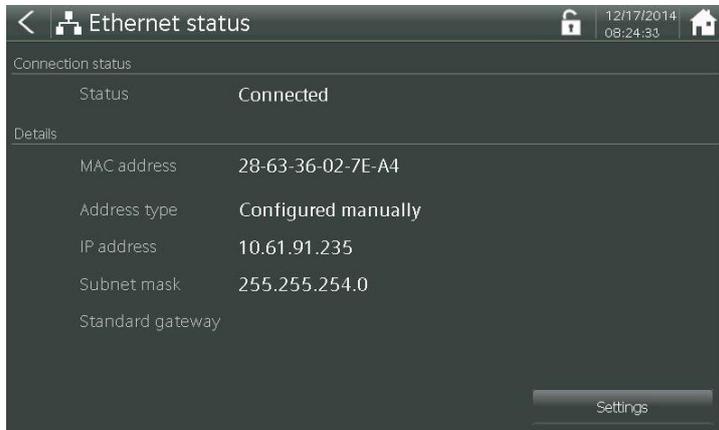

This screen shows the connection status, MAC address of the unit and the IP address settings.

**3**  Press the „Settings" button and the screen changes to the view where you can change the Ethernet settings (see Chapter 4.5 "Ethernet interface").

- The system can be integrated in a network via two different IP configurations. In order to be able to configure the necessary settings, you may have to contact the network administrator.

- When using DHCP, the setting "Obtain an IP address automatically" must be set.

- To integrate the system in the network with a specific, fixed IP address, the setting "Use the following IP Address" must be defined. In the input field "IP address", the assigned IP address (obtain from network administrator) must be entered. The Subnet mask and if necessary the Standard gateways must also be entered when manually assigning the IP address.

- If the Ethernet interface is used for data communication via Modbus TCP, the parameter Modbus Port = 502 must also be set. The factory setting is Modbus Port = Off.

- Changes to the IP configuration must be confirmed with the "Apply" button.

*Please note*

**Factory setting**

Address type:     Manually configured
IP address:       192.168.200.12
Subnet mask:      255.255.255.0

*Parameter Transfer*

To export the files, proceed as follows:

**1** Plug the USB stick into the USB socket.

**2** Use the input field (A) to enter a customer-specific file name.

**3** Press  the "Export" button.

**4** The following is displayed when file transfer was successful:
"The data was successfully exported"

To import the files, proceed as follows:

**1** Plug the USB stick into the USB socket.

**2** Use the selection menu (B) to select the corresponding parameter file to be imported.

**3** Press  the "Import" button.

**4** The following is displayed when file transfer was successful:
"xxx" parameters successfully imported
"xxx" parameters were replaced

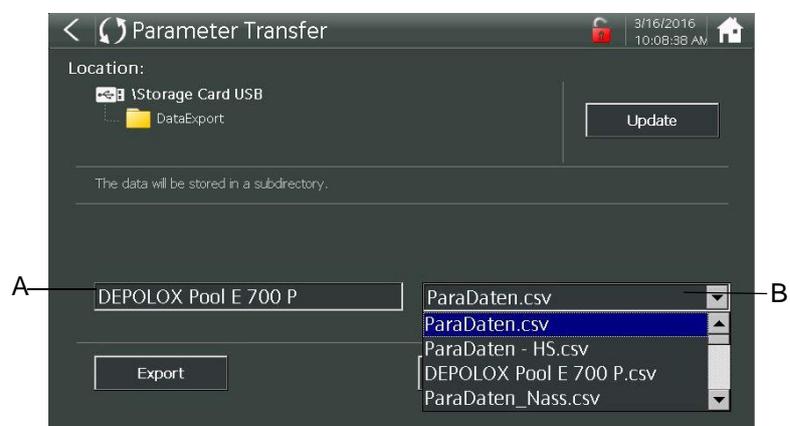

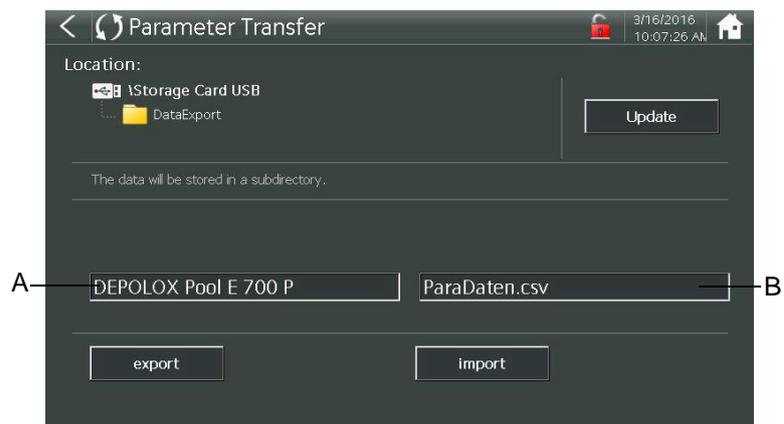

*A  Input field "customer-specific name"*
*B  Selection menu for the corresponding parameter file*

*WT-RS485*  **1** Press the "WT-RS485" button.

**2** The screen changes to the settings menu "RS485 port".

**3** The RS485 interface function can be selected via the input field "Function." To do this, tap the input field. Selection options are displayed. If Fieldbus is selected and a Fieldbus gateway is connected to the RS485 interface, various menus are shown, depending on the gateway.

The RS485 Interface supports bus communication with the Process Monitoring System or other higher-level systems that support the RS485-WT protocol.

The following communication protocols are possible:

• RS485-WT communication protocol for connection to OPC server, Process Monitoring system or higher-level control system.

• Fieldbus for connection of the Wallace & Tiernan Fieldbus converter.

• PCS485 for connection to older visualization systems that only support the RS485 protocol with 3-address operation (e.g. PCS devices). In this case, one bus address each must be set for chlorine, pH and redox.

**4** If "RS485-WT" is selected, the RS485 bus address can be entered via the input field "Subscriber address." Avoid double address assignment! To do so, tap and select the input field.

**5** Various states and error LEDs are depicted in the right half of the screen.

Status:

Active - receives data

RxD - bus communication active

TxD - responds to a request

The error LEDs should not light up during trouble-free operation of the bus.

*LED display*   **1**  Press the "LED Display" button.

**2**  The screen changes to the settings menu „LED output",

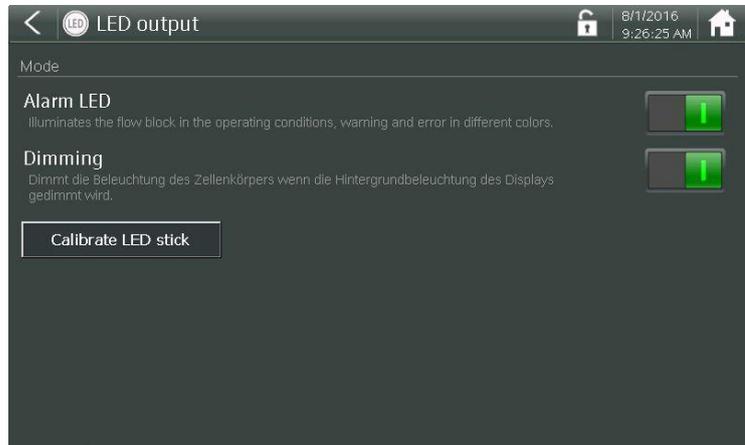

**3**  Select the desired settings.

The following settings are possible:

| LED alarm | Illuminates the cell body in various colors to indicate operation, warning, and malfunction states. |
|---|---|
| Dim | Dims the illumination of the cell body when the backlight of the display is dimmed. |
| Calibrate LED glow stick | Use this menu to adjust the illumination colors of the RGB LED of the LED glow stick to compensate for changes in color after aging. It is possible to adjust the red, green, and blue components.  |

*Setup*    **1** Press the "Setup" button.

    **2** The screen changes to the menu „Setup".

    **3** Press the "German" or "English" or "French" or „Japanese" symbol and select the desired language.

    **4** Select the „System name" input field and define a customer-specific name, e.g. children's pool, swimmer's pool. This appears in the system bar of the main screen.

    **5** Tap the input field "Temperature" and select the desired temperature measuring range (measuring range 0...50°C/ 32...122°F).

*System*    **1** Press the „System" button.

    **2** The screen changes to the settings menu „System".

- Controller outputs are integrated for the sensor channels $Cl_2$ free, pH, $Cl_2$ total and Conductivity.
- The controllers for $Cl_2$ free (Channel 1) and pH (Channel 2) are activated at the factory.
- ORP (Channel 3) has no controller output.
- $Cl_2$ total (Channel 4) and Conductivity (Channel 5) have controller outputs that are however deactivated at the factory and must be activated if required.

**3** Under Control, set the relevant button to "I" (green) to enable it. The controllers can be switched on or off as needed. If controllers are deactivated, the switching outputs can be used as an alarm contact.

**4** The corresponding values can be entered under Dosing. To do so, press and select the input field.

The following settings can be realized:

| Maximum dosing time | |
|---|---|
| Description | The maximum dosing time determines the length of time that all control outputs can work at 100 % dosing rate in both manual mode and automatic mode. The respective controller output is switched off after this time. When the setting is "00:00:00", this function is switched off. |
| Setting range | 00:00 to 10:00 h (hh:mm) |

| Feed delay | |
|---|---|
| Description | The feed delay delays the dosing start when the device is switched on and when the operating mode has been changed. The passing of the selected time can be interrupted with the "Start now!" button. |
| Setting range | 00:00 to 60:00 (mm:ss) |

| Sample water delay | |
|---|---|
| Description | The sample water delay determines the time after which dosing is deactivated, e.g. in the event of sample water stop. Whilst the delay is running, the symbol ⊜ is displayed. |
| Setting range | 00:00 to 10:00 (mm:ss) |

| Hold function | |
|---|---|
| Description | The hold function is used to either buffer all measuring values or keep them constant during calibration. This prevents the transmission of invalid control signals during the calibration process by the sensor and also the transmission of erratic values from measuring values via mA-signal and communication interfaces. |

**Menu Functions**

In the „Functions" menu, you can call up different buttons:

*Software update*  A USB stick can be used to program new software versions on the 700 P electronics module.
The new software files can be downloaded free of charge from our Homepage.

*Please note*

We recommend you save the settings on a USB flash drive before the update (Parameter Transfer menu), because they are deleted during the update. Re-import the data after the update.

Proceed as follows:

**1** Copy the file onto a USB stick (no subfolder).

**2** Switch the device off.

**3** Plug the USB stick into the USB interface on the bottom of the device (unscrew the protective cap first).

**4** Switch the device on and wait until the system displays the measured values.

**5** Switch to the "Settings" menu.

**6** Press the "Software update" button.

**7** The screen changes to the "Software update" menu.

**8** Follow the progress on the display. Programming is self-explanatory and is completed via the actual Start button.

**9** Restart the system after the update.

**10** All settings must be entered again.

*Export of archive data*

1 Plug the USB stick into the USB socket.

2 Press the "Export archive data" button.

3 The screen changes to the "Export - archive data" screen.

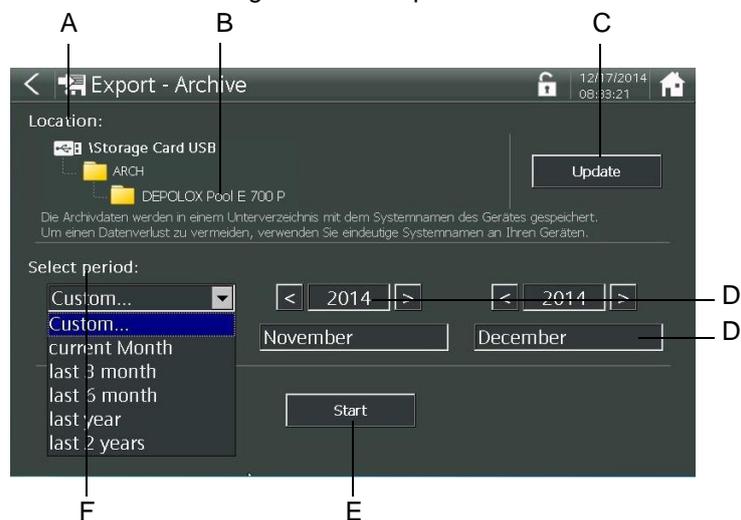

A  *Location*
B  *System name of device*
C  *Update button*
D  *Expanded input fields*
E  *Start button*
F  *Period*

4 Press and select the relevant buttons.

- Location:
  When a USB stick is plugged into the USB socket, the directory tree and archive location are shown.
  If no USB stick is plugged in or it has not been recognized, the message "USB flash drive is not available" appears.

- System name of device

- The "Update" button is needed to search for the USB stick.

- Expanded input fields

- Period:
  Different predefined time periods are available as the period for the archive data.
  When calling up Data export, the period "current month" is always selected.
  If "Custom..." is selected, additional input fields appear that can be used to determine the actual period.

- "Start" button:
  Press the "Start" button to export the data over the selected period.
  A progress bar appears which shows the current status.

The archive files are stored in CSV format on the internal SD card. A file is generated for each month. The data rate or data interval is two minutes. The archive file contains all main measurements, temperature, control outputs, and the measured values of both mA inputs.

Structure of the data name:

anlaog_2014-11.csv

2014 = year
11 = month

**Menu Information**

In the Information menu, you can call up different buttons:

*Device information*

1  Press the "Device information" button.

2  The screen changes to "Device information". This screen displays the connected hardware with the software versions and the presence of an SD memory card.

*Diagnostics*    The Diagnosis screen for the different measurements or its mod-
ules provide information about the operating conditions, serial
numbers, options, part numbers, etc.

The Diagnosis screen or modules for Cl$_2$, pH, mV, Cl-N and con-
ductance values differ in several ways.

**1**  Press the „Diagnosis" button.

**2**  The screen changes to "Diagnosis - Overview".

**3**  Select the "Cl2 free" button.

**4**  The screen changes to "Diagnosis - Module Cl2 free".

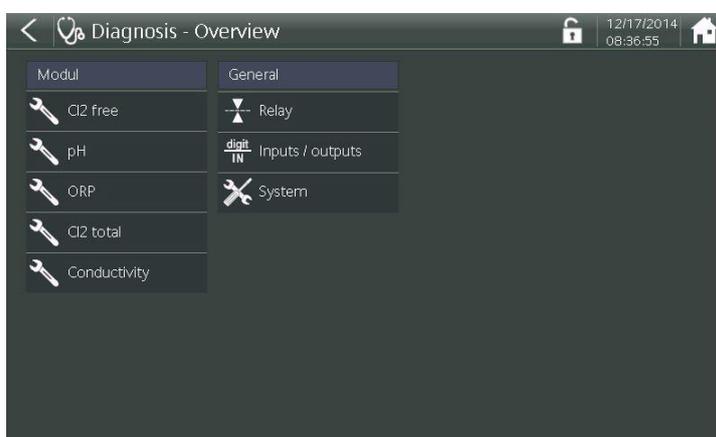

The following information is shown in the Diagnosis screen:

| Identifier | Displays the module type: Cl$_2$ free, pH, ORP, Cl$_2$ total or Conductivity |
|---|---|
| Device name | Shows the device's designation of the module: MultiSens DES-M, ModSens pH, ModSens mV, TC3 CAN SiDiSens, SiDiSens LF |
| Serial number | Shows the serial number of the hardware |
| Hard version | Shows the company-specific hardware version of the module |
| At the bottom of the screen, the internal information is displayed that is not relevant to the customer. | |

**Menu field Message system**

**1**   Press the message symbol ⚠.

**2**   The screen changes to the system menu. Here, all accumulated messages are displayed.

**3**   Messages that can be acknowledged can be confirmed by pressing the button "Acknowledge ACK messages".

     Depending on the type of message and the cause, the message is deleted immediately or it remains in the message window until the cause has been rectified. Each message is shown with a time-stamp to indicate when the message occurred.

**4**   Press the button "⚠ Expand screen" and the messages appear clearly one after the other in a list.

### 6.2.5    LED glow stick color signaling

The color of the LED glow stick changes between blue, yellow and red depending on the operating state. The top line of the HMI display includes the same color change.

The change to the different colors has the following meaning:

| White | • All OK. |
| --- | --- |
| | • The device is working trouble-free. |
| | • No active errors or currently no message in the message system. |
| yellow | • Limit contact which is configured as "unlatched" and "Message to message system", has been activated. |
| | The message cannot be acknowledged. As soon as the cause is rectified and the limit contact is inactive, the yellow color signal changes again. |
| Red | • Error message present. |
| | • A limit contact which is configured as "latched" and "Message to message system", has been activated. |
| | There are error messages that can be acknowledged or there is an error without acknowledgment. |

## 6.3    Calibration

Calibrations must be carried out with grab sample analysis - ideally photometric testing is performed.

The calibration is performed for new devices (first commissioning) and to recalibrate existing measuring instruments as part of regular pool operation.

*Please note*

A new controllers measurements must be calibrated before it is placed into control service. Subsequent calibration intervals may be dictated by local health codes.
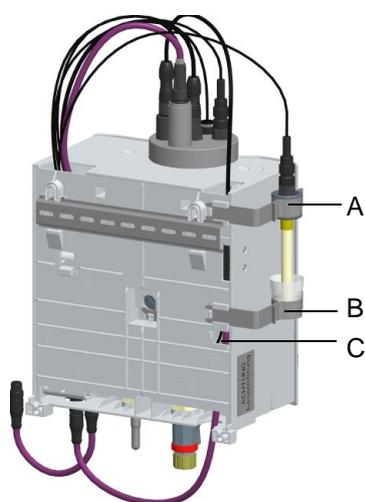

Two holding clips can be inserted on the outside of the housing and to the rear panel of the housing. The top holding clip is for the sensor and the bottom holding clip holds the buffer solution or the calibration solution. The buffer solution or calibration solution is supplied in a beaker or bag.

Image 3    DEPOLOX® Pool E flow cell, non-pressurized

*A    Upper holding device with electrode mount*
*B    Position of holding device for bag*
*C    Position of holding device for cup*

### 6.3.1    Sensor calibration

*Attention!*

**Damage to sensor!**

The electrode finger and membrane are extremely sensitive!
Do not touch, soil or damage!
Note the safety data sheets for buffer solutions or calibration solutions.

*Attention!*

**Damage to device!**

Before calibrating sensors that are placed in calibration solutions or buffer solutions, please make sure that the flow cell is non-pressurized on the pressurized version.

*Pressurized version calibration*

Before or after calibration (pH, ORP, Conductivity) of the pressurized version of the flow cell, proceed as follows:

**1** Close the ball valves on the sample water inlet and sample water outlet.

**2** Release the pressure. To do so, open and close the sample taking unit (drain) briefly.

**3** Run calibration.

**4** Open the ball valves again on the sample water inlet and sample water outlet.

## 6.3.2 Temperature calibration

Proceed as follows:

**1** Starting from the main screen, press the menu field with measuring value "Cl2 free".

**2** Select the menu feld "Calibration". The window "Cl2 free - Calibration" appears on the graphic display.

**3** Select the parameter "Temperature".

**4** Perform comparative temperature measurement.

**5** Enter the value to be calibrated using the keypad.

**6** Confirm the entry with the Enter key.

This concludes the temperature calibration.

## 6.3.3 Chlorine calibration

*Chlorine calibration*

With the chlorine calibration, each chlorine sensor (free chlorine or total chlorine) must be calibrated separately.

*Free chlorine (Cl2) calibration*

With the calibration for free chlorine, a zero point calibration and a measuring value calibration (DPD1) must be realized.

*Please note*

To prevent the emission of non-permissible control signals during calibration, the "Hold function" in the system menu should be set to "On". mA-outputs and controller outputs then remain constant as long as a calibration menu is open.

Proceed as follows:

*Zero point calibration*

1   Starting from the main screen, press the menu field with measuring value "Cl2 free".

2   Select menu field "Calibration". The window "Cl2 free - Calibration" appears on the graphic display.

3   Close the ball valve on the sample water inlet.

4   Select the parameter "Zero".

---

*Please note*

Make sure that the chlorine sensor is firmly screwed in. Otherwise the measurement accuracy will be affected by inconsistent flow and inadequate sand cleaning.
When the sample water supply has been stopped, the display first drops rapidly, and after approximately one minute slowly approaches zero. During the first commissioning, it is essential to wait for 5 minutes, even if the display should show "0.00" or flash after a few seconds.

---

5   Wait until the displayed chlorine value no longer changes.

6   Press „Apply" to set the display to "0.00".

7   Open the ball valve on the sample water inlet.

*Measuring value calibration (DPD)*

8   After zero point calibration, wait at least 2 minutes.

9   Open the sample taking unit (drain) by approximately one turn and extract a specimen of the sample water.

10  Determine the content of free chlorine in the sample using a photometer.

11  Select the parameter "DPD".

12  Use the input field to enter the determined value.

13  Confirm the entry with the Enter key.

Calibration for free chlorine is then concluded.

*Total chlorine calibration*

*Please note*

When calibrating the total chlorine or combined chlorine, only a one point calibration needs to be performed.

For the total chlorine calibration, proceed as follows:

**1**  Open the drain by approximately one turn and collect a sample water.

**2**  Determine the total chlorine content (DPD3) with a photometer or other grab sample test device.

**3**  Starting from the main screen, press the menu field with measuring value "Cl2 total".

**4**  Select the menu field "Calibration". The window "Cl2 total - Calibration" appears on the graphic display.

**5**  Select the parameter "DPD".

**6**  Use the input field to enter the determined value.

**7**  Confirm the entry with the Enter key.

This concludes the total chlorine calibration.

*Combined chlorine calibration*

When calibrating the combined chlorine, proceed as follows:

**1**  Determine the values for free chlorine (DPD1) and total chlorine (DPD3) as described under "Total chlorine" step 1 or 2.

**2**  Determine the value for combined chlorine:
Total chlorine DPD3 minus free chlorine DPD1 = combined chlorine

**3**  Starting from the main screen, press the menu field with measuring value "Cl2 combined".

**4**  Select the menu field "Calibration". The window "Cl2 combined - Calibration" appears on the graphic display.

**5**  Select the parameter "DPD".

**6**  Use the input field to enter the determined value as described under "Total chlorine".

**7**  Confirm the entry with the Enter key.

This concludes the combined chlorine calibration.

### 6.3.4    pH calibration

*Please note*

During pH calibration, the buffer solution and the sample water should have the same temperature. If the buffer solution and the sample water are at different temperatures, it is possible to enter the temperature value of the buffer solution for calibration during span alignment.

Proceed as follows:

*pH7 alignment*

1  Starting from the main screen, press the menu field with measuring value "pH".

2  Select the menu field "Calibration". The window "pH - Calibration" appears on the graphic display.

3  Select the "pH 7" parameter.

4  Place the beaker into the bottom clip and fill with the buffer solution "pH 7.00" or clamp the bag with the buffer solution "pH 7.00" into the bottom clip.

5  Close the sample water inlet and outlet (for pressurized version of the flow cell only) and open the sample taking unit (drain) briefly. Close the sample taking unit (drain) once more.

6  Pull or unscrew the pH sensor from the cover of the cell body of the flow cell.

7  Dip the pH sensor through the top clip at least 2 cm (1 inch) deep into the buffer solution and move slightly until the indicated pH value remains constant.

8  Use the input field to enter the value of the buffer solution to be calibrated.

9  Confirm the entry with the Enter key.

*Slope alignment*

10  Remove the buffer solution "pH 7.00" from the bottom clip.

11  Wash the sensor in distilled water to prevent carryover of the buffer solution.

12  Select the parameter "pH X".

13  If the sample water and the pH buffer solution are at different temperatures, the temperature value of the buffer solution should be entered under "Calibrate at" The value is deleted again when the menu "pH X" is closed.

14  Place the beaker into the bottom clip and fill with the buffer solution "pH 4.65" or clamp a bag with the buffer solution "pH 4.65" into the bottom clip.

*Please note*

If buffer solutions other than those stated are used, the pH value of the buffer solution must be lower than pH 6 or higher than pH 8.

**15** Dip the pH sensor at least 2 cm (1 inch) deep into the buffer solution and move gently until the indicated pH value remains constant.

**16** Use the keypad to enter the value to be calibrated.

**17** Confirm the entry with the Enter key.

**18** Remove the pH sensor from the top clip.

**19** Insert or screw the pH sensor into the cover of the cell body of the flow cell.

**20** Open the sample water inlet and outlet once more (for pressurized version of the flow cell only).

The pH measurement is then calibrated.

*Offset compensation*    If external influences result in a constant difference between the displayed pH value and a pH value measured manually, this difference can be compensated.

Proceed as follows:

**1** Starting from the main screen, press the menu field with measuring value "pH".

**2** Select the menu field "Calibration". The window "pH - Calibration" appears on the graphic display.

**3** Select the "Offset" parameter.

**4** Using the keypad, enter the comparative value.

**5** Confirm the entry with the Enter key.

The pH offset is then concluded.

*Please note*

The calibration offset is deleted each time a new pH-7 alignment or span alignment is performed.

The offest values between a new offset calibration and a previous offset calibration are additive (the controller automatically adds them). For this reason first enter an offset of „0" and then enter the actual set value from the grab sample analysis.

### 6.3.5    ORP calibration (mV)

*Please note*

ORP sensors have long running-in times. After calibration with a calibration solution, it can therefore take several hours until the measuring value has stabilized.

Proceed as follows:

1   Starting from the main screen, press the menu field with measuring value "ORP".

2   Select the menu field "Calibration". The window "ORP - Calibration" appears on the graphic display.

3   Select the "Cal. value" parameter.

4   Place the beaker into the bottom clip and fill with the calibration solution "478 mV" or clamp a bag with the calibration solution "478 mV" into the bottom clip.

5   Close the sample water inlet and outlet (for pressurized version of the flow cell only) and open the sample taking unit (drain) briefly. Close the sample taking unit (drain) once more.

6   Pull or unscrew the ORP sensor from the cover of the cell body of the flow cell.

7   Dip the ORP sensor through the top clip at least 2 cm deep into the calibration solution and move slightly until the indicated value remains constant.

8   Use the keypad to enter the value to be calibrated.

9   Confirm the entry with the Enter key.

10   Remove the ORP sensor from the top clip.

11   Insert or screw the ORP sensor into the cover of the cell body of the flow cell.

12   Open the sample water inlet and outlet once more (for pressurized version of the flow cell only).

ORP calibration is then concluded.

### 6.3.6 Conductivity calibration

*Please note*

The conductivity sensor has an integrated temperature sensor and therefore an automatic temperature compensation feature.

Proceed as follows:

**1** Starting from the main screen, press the menu field with measuring value „Conductivity".

**2** Select the menu field "Calibration". The "Conductivity - Calibration" window appears on the graphic display.

**3** Select the parameter "Cal. value".

**4** Place the beaker into the bottom clip and fill with approx. 25 ml of the calibration solution "60.0mS/cm" or clamp a bag with calibration solution "60.0 mS/cm" into the bottom clip.

**5** Close the sample water inlet and outlet (for pressurized version of the flow cell only) and open the sample taking unit (drain) briefly. Close the sample taking unit (drain) once more.

**6** Pull or unscrew the conductivity sensor from the cover of the cell body of the flow cell.

**7** Dip the conductivity sensor through the top clip into the calibration solution to the bottom of the beaker.

**8** Pull out the conductivity sensor and rinse off with distilled water.

**9** Repeat the dipping and rinsing procedure several times.

**10** Replace the calibration solution that is in the bottom clip with a new one.

**11** Repeat the measurement. Move the conductivity sensor slightly until the displayed value remains constant.

**12** Use the keypad to enter the value to be calibrated.

**13** Confirm the entry with the Enter key.

**14** Insert or screw the conductivity sensor into the cover of the cell body of the flow cell.

**15** Open the sample water inlet and outlet once more (for pressurized version of the flow cell only).

Conductivity calibration is then concluded.

## 6.4　Errors and remedies

### 6.4.1　Error messages

The following table shows and explains all possible error messages which can be displayed. If several errors occur at the same time, the corresponding messages appear alternately in succession. Once the error has been corrected, the error message is automatically deleted.

If it is not possible to remedy the fault or error yourself, please contact your affiliate.

The error messages of the 700 P electronics module are displayed as a plain text message in the menu field of the measurement in question. Error messages can occur that can be acknowledged or not acknowledged.

**Errors that can be acknowledged**

All of the following errors can be acknowledged. These are acknowledged via the system menu and the ACK button or "Acknowledge messages".

| Error message | Cause | Remedy |
|---|---|---|
| Maximum dosing time? | The maximum dosing time set for a control output has been exceeded. | Determine the cause, e.g. chemical tank empty.<br>Check the dosing pump. |
| Adaption? | Adaption terminated with error. | Refer to Chapter 3.4.10 "Adaption (only applies to free Cl2)". |
| Peak chlorination? | Rise time > max. delay or exceeding of the µA measurement range by the sensor during peak chlorination. | Increase max. delay time or select higher measurement range. |

**Errors that cannot be acknowledged**

All of the following errors cannot be acknowledged and can only be rectified by eliminating the cause.

| Error message | Cause | Remedy |
|---|---|---|
| Measured value display flashes | Measured value is outside the measurement range | Check measurement range and change, if necessary. Check dosing or controller settings |
| Positioner feedback flashes red | Line break/short circuit/feedback potentiometer: The positioner is defective. | Replace the positioner |
| Positioner feedback flashes white | Positioner in manual mode | Press in the adjustment knob on the positioner |
|  | Sample water flow recently insufficient (delay running) | Check the sample water flow rate (approx. 33 l/h) |
|  | Sample water flow rate insufficient for some time (delay elapsed). | Clean or replace the preliminary filter. Multi-sensor incorrectly connected or defective. |
| Zero ? | 3-electrode measuring cell: Sensor has zero current > +5 µA or < -5 µA | Upot potential voltage set incorrectly; change, if necessary. Electrodes of 3-electrode measuring cell are dirty, if necessary clean / service. Sample water is not turned off or check valve leaks; turn off sample water, if necessary. |
| | Membrane sensors: Sensor has zero current > +5 µA or < -5 µA | Disinfectant in water, calibrate with disinfectant-free water, if necessary. See page 70. Check sensors and replace or service, if necessary. |

| Error message | Cause | Remedy |
|---|---|---|
| DPD ? | Slope error<br><br>The current difference required for span alignment over the entire measurement range was less than the minimum value.<br><br>Range: Minimum current difference<br><br>10 µA      0.04 µA/mg/l<br>100 µA     0.4 µA/mg/l<br>1000 µA   4.0 µA/mg/l | Check $Cl_2$ sensor.<br><br>Clean electrodes.<br><br>Check the pH value of the water (< pH 8). |
| | Organic chlorine compounds (e. g. high concentration of chlorine stabilizer chloroisocyanurate) in the water. | Do not add high concentrations (<30 mg/l) of chlorine stabilizers to the water. |
| | Incorrect Upot for $CL_2$ sensor. | Set Upot: 250 mV, see page 70. |
| Calibration pH7 ?<br>Calibration pHX ?<br>Calibration ?<br>Offset calibration ? | 3-electrode measuring cells or membrane sensors:<br>Slope error - the sensor current based on 1 mg/l has fallen below the required minimum. | Check whether there are air bubbles on the membrane sensor and remove, if necessary.<br><br>Service membrane sensors - replace electrolyte/membrane cap.<br><br>Clean 3-electrode measuring cells, replace cleaning sand. |
| | pH:<br>In pH 7 calibration, the sensor signal is outside -100 to +100 mV or the sensor issues a signal outside 46 to 70 mV per pH increment, the calibration point distance is smaller than 1 pH increment. | Check the electrode.<br><br>Check the buffer solutions, replace if necessary. |
| | mV:<br>The mV electrode correction offset is outside -50 to +50 mV. | Check the electrode.<br><br>Check the calibration solution, replace if necessary. |
| | Conductivity:<br>Conductivity measurement spread is smaller than 0.8 or larger than 1.2. | Clean the sensor, check it and if necessary, replace it. |
| Measuring cell ? | | |
| Calibration of factory ? | Hardware or electronics fault | Contact Service. |
| Setpoint ? | Due to modification of the measurement range, the controller setpoint is outside the measuring range. | Reset the controller setpoint or adjust the measurement range. |

| Error message | Cause | Remedy |
|---|---|---|
| Limit value ? | | |
| Cl2++ ? | pH<6 or pH>8.75<br>pH measurement is not available. | Check the pH measurement, check DFMe electronics module, check CAN bus setup. |
| Cl2 combined ? | Free $Cl_2$ measurement is not available. | Check the DFMe electronics module, check CAN bus setup. |
| Overfeed ? | The maximum dosing time set for a control output has been exceeded. | Determine the cause, e.g. chemical tank empty.<br><br>Check the dosing pump. |
| Adaption ? | Adaption terminated with error. | See Chapter 3.4.10 "Adaption (only applies to free Cl2)". |
| CAN measuring value ? | No CAN bus subscriber. | Check CAN bus, set parameters for CAN subscribers. |
| Temperature ? | Interruption in the temperature sensor or cable of the multi-sensor. | Check multi-sensor and cable. |
| Sample water ? | | |
| Positioner Ym ? | Ym range too narrow.<br><br>Positioner position incorrectly calibrated. | Check the gap between the calibration points. |
| | Positioner selected, but not connected. | Check setting: Positioner with Ym. |
| | Feedback signal incorrectly set. | Check DIP switch for feedback. |
| | Positioner feedback incorrectly connected or defective. | Check (refer to 9. "Wiring Diagrams"). |
| Calibration Ym ? | Positioner calibration incorrect. | Check calibration of actuator feedback. |
| mA output 1 ?<br>mA output 2 ?<br>mA output 3 ?<br>mA output 4 ? | Load error<br>The mA output cannot drive its mA output current through the connected current loop (500 Ohm at 20 mA max.). | Check whether the mA signal is required at all (e.g. for plotter). If not, switch off the output signal in the "INPUTS/OUTPUTS" menu, "Analog output".<br><br>Check mA signal cable for interruption |
| Flocculation ? | pH value outside the flocculation limit values. | Check flocculation limit values.<br><br>Check pH measurement and control. |

| Error message | Cause | Remedy |
|---|---|---|
| Peak chlorination ? | Rise time > max. delay or exceeding of the µA measurement range by the sensor measuring module during peak chlorination. | Increase max. delay time or select higher measurement range. |
| Hardware ? | Hardware or electronics fault | Contact Service. |
| EEprom storage ? | Hardware or electronics fault | Contact Service. |
| Cell ? | 3-electrode measuring cell: Chlorine sensor not screwed in. No sand cleaning. Sensor, sensor cable or sensor measuring module defective. Sensor measuring module µA measuring range exceeded.<br><br>pH, F⁻ and mV modules: Sensor, sensor cable or sensor measuring module defective.<br><br>Membrane sensors: Sensor, sensor cable or sensor measuring module defective. Sensor measuring module µA measuring range exceeded.<br><br>Conductivity modules: Sensor, sensor cable or sensor measuring module defective. | Screw in sensor correctly.<br><br>Check sand cleaning.<br><br>Check the sensor, sensor cable or sensor measuring module, replace if necessary.<br><br>Select higher µA measurement range.<br><br>Check the sensor, sensor cable and sensor measuring module, replace if necessary.<br><br>Check the sensor, sensor cable and sensor measuring module, replace if necessary.<br><br>Check the sensor, sensor cable or sensor measuring module, replace if necessary, clean sensor. |
| Module ? | Sensor measuring module was removed. Sensor measuring module defective. | Refit or replace the sensor measuring module |
| Measuring range? | Min. or max. limit value is outside the measuring range. | Check the min/max limit values and change, if necessary. |
| mA Input 1 ?<br>mA Input 2 ? | mA input signal exceeded or not reached. | Check mA connection or signal. |
| CAN actuator? | No CAN actuator. | Check CAN bus, set parameters for CAN subscribers. |
| Ym display flashing | Positioner unlocked. | Engage positioner to Automatic. |

### 6.4.2 Error

The following table shows and explains possible errors which can occur. If it is not possible to remedy the fault or error yourself, please contact your affiliate.

| Errors | Cause | Remedy |
|---|---|---|
| No indication on device | No power supply. | External switch or fuse on. |
| | Device fuse defective. | Check the power supply and replace fuse (Electrician). |
| Device not showing a measurement | Sensor measuring module has been changed or added. | Start sensor scan. |
| Displayed/output value incorrect | Change on sensor or in the sample water. | Calibrate |
| Low control quality (controller swings, setpoint not reached) | Incorrect control parameters. | Check, adjust controller parameters; perform automatic adaption on single feedback closed-loop control. |
| | Dosing chemical tank empty. | Fill, replace. |
| | Incorrect actuator selected. | Check, correct actuator. |
| | Positioner or pump defective. | Check, replace positioner/pump. |
| Measured value display not available, although the appropriate measuring module is installed | Measuring module defective or fitted incorrectly. | Check, replace measuring module (Electrician). |
| Positioner/pump does not work | Positioner in manual mode. | Engage manual knob. |
| | Dosing device selected incorrectly. | Select correct dosing device. |
| | Positioner/pump incorrectly connected. | Connect the positioner/pump correctly. (Electrician). |
| | Relay defective. | Check (electrician). |
| | Incorrect application. | Check (see "Adaption" or 9. "Wiring Diagrams"). |
| Positioner runs in wrong direction | Positioner incorrectly connected. | Correct connections (electrician). |
| Positioner closes | Positioner feedback interrupted. | Correct connections (electrician). |
| Digital inputs without function | Digital inputs not activated. | Activate digital inputs. |

# 7. Maintenance

*Danger!*

**Risk of injury or death!**

External voltages may be connected even with the operating voltage switched off.

## 7.1    Maintenance intervals

*Please note*

Liability for defects can only be accepted if maintenance work is performed as specified. Adhere to the applicable standards and national and regional regulations.

| Activity | Period/Interval |
|---|---|
| 700 P electronics module | Change batteries after 5 years |

## 7.2    Changing the fuses on the A&C board

*Warning!*

**Risk of injury!**

Only authorized and qualified electricians are permitted to open the housing of the 700 P electronics module. The 700 P electronics module does not have a mains switch.

*Danger!*

**Risk of injury or death!**

External voltages may be connected even with the operating voltage switched off.

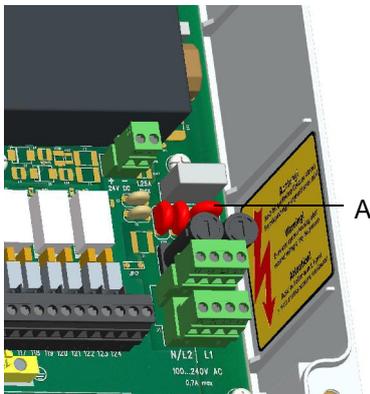

**1**  Disconnect the 700 P electronics module from the power supply.

**2**  Remove the housing cover of the 700 P electronics module. To do this, unscrew the housing cover and remove carefully. Hook it into the holders on the basic housing.

**3**  Screw on the screw-in fuse holder F1/F2.

**4**  Change the defective fuse.

**5**  Screw the screw-in fuse holder back in.

**6**  Refit the housing cover of the 700 P electronics module. Tighten the housing screws to a maximum torque of 0.7 Nm (± 0.15 Nm).

Image 1   Section of 700 P electronics module - fuses

## 7.3    Replacing the battery

*Warning!*

**Risk of injury!**

Only authorized and qualified electricians are permitted to open the housing. The 700 P electronics module does not have a mains switch.

*Danger!*

**Risk of injury or death!**

External voltages may be connected even with the operating voltage switched off.

The battery is required for the real time clock in case of a power failure. If the time is not correct or if time controlled functions show faulty behavior, the battery must be changed. After five years at the latest.

1  Disconnect the 700 P electronics module from the power supply.

2  Remove the housing cover of the 700 P electronics module. To do this, unscrew the housing cover and remove carefully. Hook it into the holders on the basic housing.

3  Unplug the cable with the DSub plug.

4  Pull the old battery and holder out of the HMI.

**5** Remove the battery from the holder and dispose of in accordance with the regulations.

---

*Attention!*

Do not throw away or burn the battery. The batteries must be disposed of in accordance with environmental protection regulations.

---
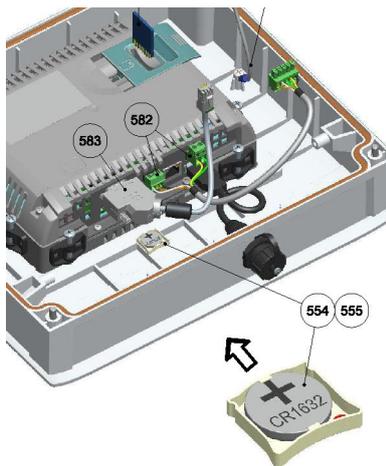

**6** Insert the new battery, type CR1632.

**7** Fit the battery holder and new battery into the HMI.

**8** Plug the cable with the DSub plug in again and screw back on tightly.

**9** Refit the housing cover of the 700 P electronics module. Tighten the housing screws to a maximum torque of 0.7 Nm (± 0.15 Nm).

**10** Switch on mains voltage.

**11** Set the date and time.

Image 2   Section of 700 P electronics module - battery

## 7.4    Cleaning

Do not use aggressive cleaning agents (e.g., alcohol, abrasive cleaners)! We recommend a damp cloth moistened with a commercially available neutral detergent.

# 8. Retrofit kits and spare parts

## 8.1 Retrofit kits

The 700 P electronics module (module type E01) gives the option to retrofit components that are not included when the product was purchased.

The following retrofit kits are available:

- 4-way mA output card
- 4-way relay board
- Fieldbus converter for wall-mounted devices
- Fieldbus converter for control cabinet installation devices

### 8.1.1 4-way mA output card and 4-way relay board

See Chapter "Explosion drawing 700 P electronics module" on page 135 and on page 136.

| Item | Part No. | Designation |
|---|---|---|
| 507, 508, 509 | W3T320083 | 4-way mA output card |
| 510 | W3T320084 | 4-way relay board |

### 8.1.2 Fieldbus converter

| Part No. | Designation | Supply voltage | Fieldbus type | Connection |
|---|---|---|---|---|
| **Fieldbus converter for wall-mounted (accessories)** | | | | |
| W3T162700 | Fieldbus converter WA Profibus DP Terminals | 100 to 240 V AC | Profibus DP | Screw terminals |
| | | | | |
| **Fieldbus converter for control cabinet (accessories)** | | | | |
| W3T162703 | Fieldbus converter CA Profibus DP Terminals | 24 VDC | Profibus DP | Screw terminals |
| W3T162704 | Fieldbus converter CA Profibus DP D-Sub | 24 V DC | Profibus DP | 9-pole D-Sub plug |

## 8.2    Installing retrofit kits

### 8.2.1    Installing the mA output card or 4-way relay board

Proceed as follows:

**1**    Disconnect the 700 P electronics module from the power supply.

**2**    Remove the housing cover of the 700 P electronics module. To do this, unscrew the housing cover and remove carefully. Hook it into the holders (E) on the basic housing.

**3**    Install the mA output card at position A, C and D and make sure that the holders engage.
or Install 4-way relay board at position B.

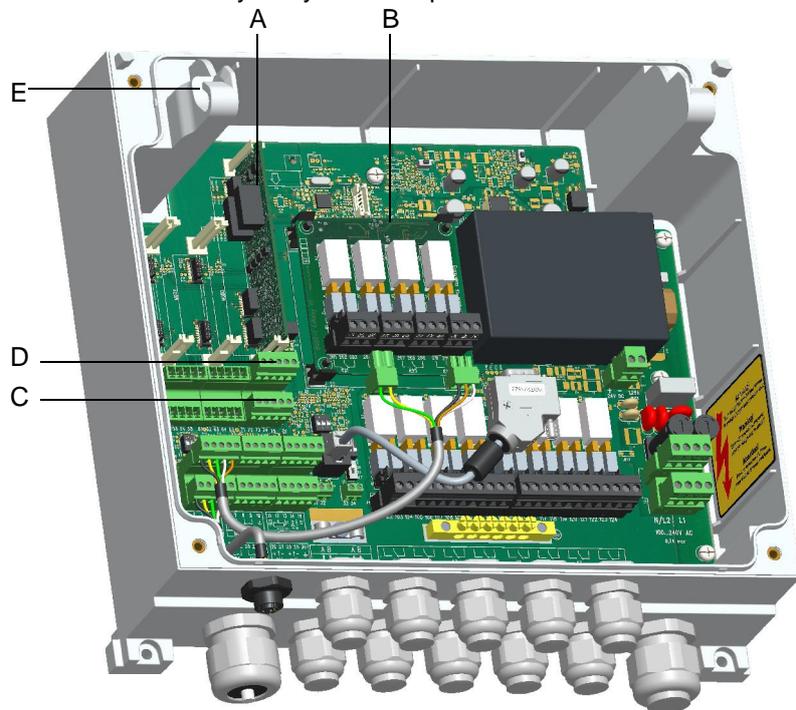

Image 1   Cross-section of 700 P electronics module

**4**    Wire in accordance with the wiring diagram (see Chapter9. "Wiring Diagrams").

*Please note*

Please note that the shield of the analog signal line may only be grounded on one end.

**5**   Refit the housing cover of the 700 P electronics module. Tighten the housing screws to a maximum torque of 0.7 Nm (± 0.15 Nm).

**6**   Switch the 700 P electronics module back on again.

**7**   The 700 P electronics module automatically detects the installed modules and enables the corresponding settings menus.

### 8.2.2    Installing the Fieldbus converter

For instructions, refer to the separate instruction manual "Fieldbus converter".

## 8.3    Spare parts

### 8.3.1    700 P electronics module (module type E01)

*Please note*

For reasons of safety, only use original spare parts. Please contact our customer service if you need any spare parts.

See explosion drawings on on page 135 and on page 136.

| Item | Part No. | Designation |
|------|----------|-------------|
|      | W3T320001 | 700 P electronics module (module type E01) |
| 521  | W3T247667 | Basic housing for 700 P electronics module |
| 522  | W3T320030 | A&C Board |
| 523  | W2T504397 | Plastic self-tapping screw d4x10 |
| 524  | W3T263330 | CAN bus connection |
| 526  | W3T160551 | M20x1.5 hex nut |
| 527  | W2T504179 | M20x1.5 cable gland |
| 528  | W2T504212 | M20 blind plug |
| 529  | W3T160552 | M25x1.5 hex nut |
| 530  | W2T542498 | M25x1.5 cable gland for assembly of cables with pre-assembled connectors |
| 531  | W2T503976 | 6x25mm bolts |
| 532  | W2T504180 | M25x1.5 cable gland |

| Item | Part No. | Designation |
|------|----------|-------------|
| 533 | W2T804252 | M25 blind plug |
| 551 | W3T247669 | Housing cover for 700 P electronics module |
| 553 | W3T326731 | HMI TP700P (incl. plastic tensioner and battery) |
| 553 | W3T360781 | HMI TP700P, reconditioned (Incl. plastic tensioner and battery) |
| 554 | W3T263405 | Battery carriage |
| 555 | W2T555401 | Lithium coin cell battery CR1632 |
| 556 | W3T277475 | Plastic tensioner for HMI |
| 558 | W3T263402 | USB connection |
| 559 | W3T263403 | Protective cap for USB connection |
| 560 | W3T319670 | Strain relief cable |
| 561 | W2T504397 | Plastic self-tapping screw d4x10 |
| 564 | W3T260714 | M5 cover screw |
| 581 | W2T806599 | Industrial 2GB SD memory card |
| 582 | W3T263329 | RJ45 connection cable A&C Board/HMI |
| 583 | W3T263328 | RS485 connection cable A&C Board/HMI |
| 584 | W3T309478 | Product strip 700 P module |
|  | W2T506813 | Fine-wire fuse |
|  | W3T345599 | Touch pen with Wallace & Tiernan logo for HMI operation |
|  | W2T819286 | Touch pen holder, self-adhesive |

**Explosion drawing 700 P electronics module**
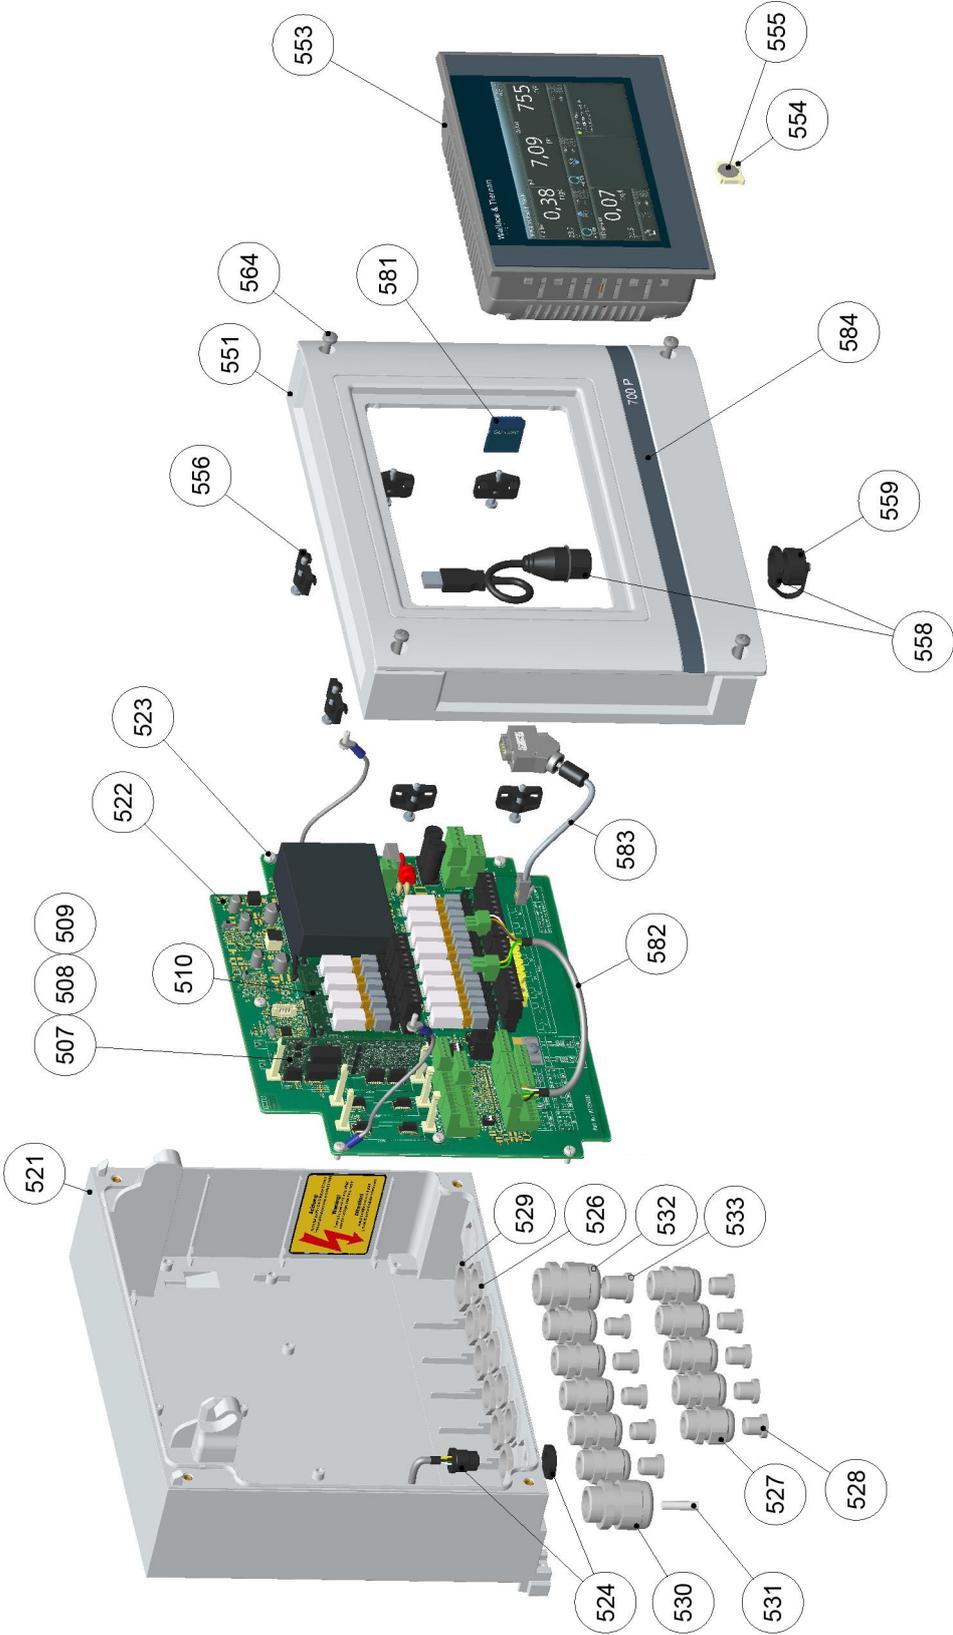

**Explosion drawing 700 P electronics module**
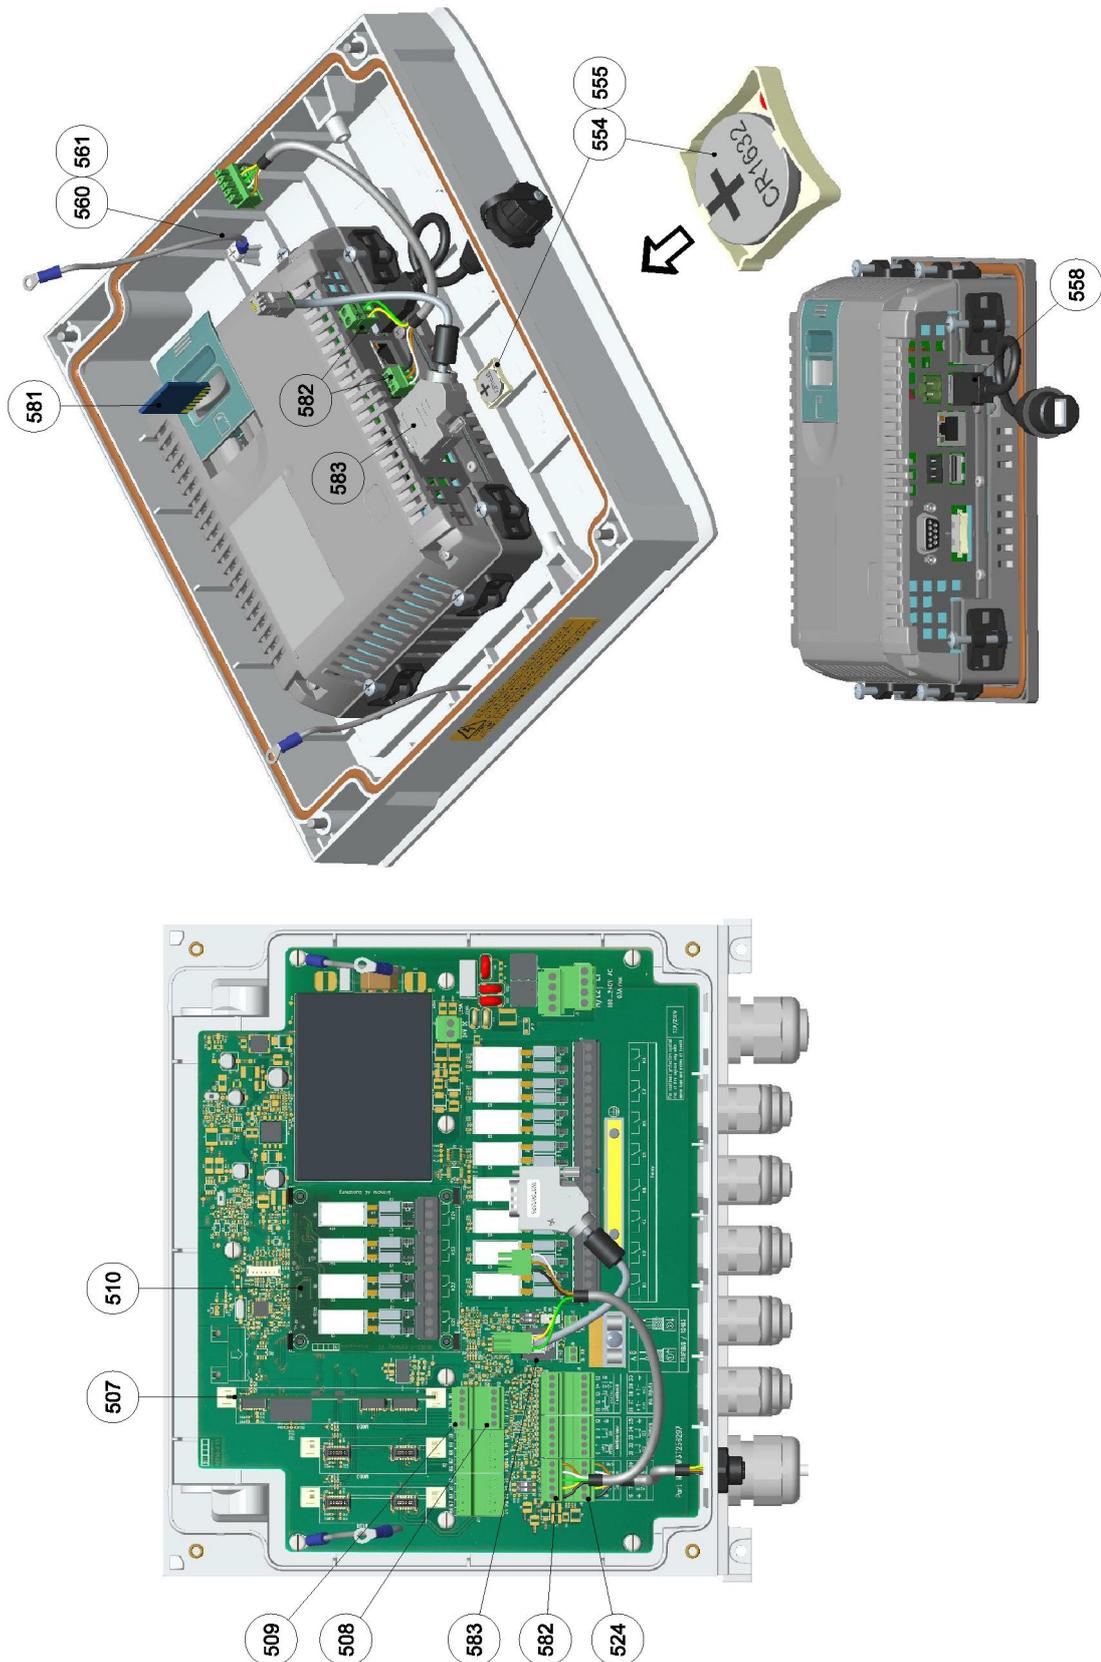

### 8.3.2    Accessory kit for the cable gland

The following accessory kit is also available for the cable gland:

| Part No. | Designation |
|----------|-------------|
| W3T314845 | Accessory kit, comprising:<br>multi-cable sealing insert, reducing sealing ring, bolts and fine-wire fuse (2x W2T506813) |

### 8.3.3    RS485 bus interface

The following accessory is available for the RS485 bus interface:

| Part No. | Designation |
|----------|-------------|
| W2T505559 | RS485 data cable |

### 8.3.4    Instruction Manuals

| Part No. | Designation |
|----------|-------------|
| W3T321511 | Instruction manual 700 P electronics module, German |
| W3T321512 | Instruction manual 700 P electronics module, English |
| W3T321513 | Instruction manual 700 P electronics module, French |
| W3T321498 | Instruction manual DEPOLOX® Pool E flow cell, German |
| W3T321499 | Instruction manualInstruction manual DEPOLOX® Pool E flow cell, English |
| W3T321500 | Instruction manual DEPOLOX® Pool E flow cell, French |
| W3T332381 | Instruction manual DEPOLOX® 5 E flow cell, German |
| W3T332382 | Instruction manual DEPOLOX® 5 E flow cell, English |
| W3T332383 | Instruction manual DEPOLOX® 5 E flow cell, French |

# EG-Konformitätserklärung
## EC Declaration of Conformity
### Déclaration CE de conformité

No. MAE1562
Ausgabe/*issue*/édition   04

| | |
|---|---|
| Hersteller/*Manufacturer*/**Constructeur:** | Evoqua Water Technologies GmbH |
| Anschrift/*Address*/**Adresse:** | Auf der Weide 10, D-89312 Günzburg |
| Produktbezeichnung:<br>*Product description:*<br>**Description du produit:** | Elektronik-Modul 700 P (E01), Elektronik-Modul<br>Blu-Sentinel Pro (E01)<br>*700 P electronics module (E01), Blu-Sentinel Pro electronics module (E01)*<br>**Module électronique 700 P (E01), Module électronique Blu-Sentinel Pro (E01)** |

Das bezeichnete Produkt stimmt in der von uns in Verkehr gebrachten Ausführung mit den Vorschriften folgender europäischer Richtlinien überein:
*The product described above in the form as delivered is in conformity with the provisions of the following European Directives:*
**Le produit désigné est conforme, dans la version que nous avons mise en circulation, avec les prescriptions des directives européennes suivantes :**

2014/30/EU      Richtlinie des Europäischen Parlaments und des Rates vom 26. Februar 2014 zur Harmonisierung der Rechtsvorschriften der Mitgliedstaaten über die elektromagnetische Verträglichkeit.
*Directive of the European Parliament and of the Council of 26 February 2014 on the approximation of the laws of the Member States relating to electromagnetic compatibility.*
**Directive du Parlement européen et du Conseil du 26 février 2014 relative au rapprochement des législations des Etats membres concernant la compatibilité électromagnétique.**

2014/35/EU      Richtlinie des Europäischen Parlaments und des Rates vom 26. Februar 2014 zur Harmonisierung der Rechtsvorschriften der Mitgliedstaaten betreffend elektrische Betriebsmittel zur Verwendung innerhalb bestimmter Spannungsgrenzen.
*Directive of the European Parliament and of the Council of 26 February 2014 on the harmonisation of the laws of Member States relating to electrical equipment designed for use within certain voltage limits.*
**Directive du Parlement européen et du Conseil du 26 février 2014 concernant le rapprochement des législations des Etats membres relatives au matériel électrique destiné à être employé dans certaines limites de tension.**
CE-Kennzeichnung / *CE marking* / **Marquage CE:**   2017

evoQua
WATER TECHNOLOGIES

Die Konformität mit den Richtlinien wird nachgewiesen durch die Einhaltung der in der Nachweisdokumentation aufgelisteten Normen.
*Evidence of conformity to the Directives is assured through the application of the standards listed in the relevant documentation.*
**La conformité avec les directives est assurée par le respect des normes listés dans la documentation téchnique correspondante.**

Benannte Person für technische Unterlagen:
*Authorized person for the technical file:*
**Personne désignée pour la documentation technique:**

Name / *name* / **nom:** Evoqua Water Technologies GmbH

Adresse / *address* / **adresse:** Auf der Weide 10, D-89312 Günzburg

## 10.2     Certificate of Compliance

**Certificate of Compliance**

| | |
|---|---|
| **Certificate:** 70027582 | **Master Contract:** 226676 |
| **Project:** 70138021 | **Date Issued:** 2017-07-14 |

**Issued to:**     **Evoqua Water Technologies GmbH**
**Auf der Weide 10**
**Gunzburg,  89312**
**GERMANY**

*The products listed below are eligible to bear the CSA Mark shown with adjacent indicators 'C' and 'US' for Canada and US or with adjacent indicator 'US' for US only or without either indicator for Canada only.*

**Issued by:**  *Jean-Philippe Laplante*
Jean-Philippe Laplante

**PRODUCTS**
CLASS - C363106 - ELECTRICAL MEASUREMENT AND TEST EQUIPMENT
CLASS - C363186 - ELECTRICAL EQUIPMENT FOR MEASUREMENT USE-Certified to US Standards

Water management system, Models:

Main units:     W3Ta E01 b; rated: 100-240Vac, 50/60Hz, 48W or 24Vdc, 30W /
W3Ta E02; rated: 100-240Vac, 50/60Hz, 24W **or** 24Vdc, 15W;
all models: 6A max rating including external loads supplied from the mains input circuit of the main units via cord outlets or permanently wired

Flow-through units: W3Tc D01 / W3Tc D02, supplied by the main units.

(Where a, b & c are alphanumeric placeholders (different length; including blanks) for non-safety-critical properties and configurations like user interface design and water analysis functions)

| **Certificate:** | 70027582 | **Master Contract:** | 226676 |
| **Project:** | 70138021 | **Date Issued:** | 2017-07-14 |

Notes:

1. The above models are permanently connected or non-detachable cord (model dependent) Equipment Class I, Pollution Degree 2, Overvoltage category II
2. Mode of operation: Continuous
3. Environmental Conditions: Extended: 0 to 50°C, 2000m max, maximum 80% RH non-condensing.

**APPLICABLE REQUIREMENTS**

CAN/CSA-C22.2 No. 61010-1-12     -     Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use, Part 1: General Requirements

UL Std. No. 61010-1 (3$^{rd}$ Edition)     -     Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements

**CONDITIONS OF ACCEPTABILITY**

1. The input pressure for the water management system shall be externally limited to 3 bars (300kPa).
2. The equipment shall be installed to the mains supply system using a disconnecting device with the off-position clearly marked and a 6A back-up fuse must be used in the main supply line (for permanently connected only)
3. Relay connections to external devices shall be connected using 5A fuses as overcurrent protection (model E01 only)
4. This product has not been evaluated for rigid conduit installation. The product shall not be installed using conduits.
5. Equipment is only to be installed by authorized qualified electricians.
6. Maintenance of equipment (including fuse and battery replacements) is only to be performed by authorized qualified electricians.
7. Equipment is not to be used with flammable liquids.

DQD 507 Rev. 2016-02-18        Page 2

*Supplement to Certificate of Compliance*

**Certificate:**    70027582                     **Master Contract:**  226676

*The products listed, including the latest revision described below,
are eligible to be marked in accordance with the referenced Certificate.*

### Product Certification History

| Project | Date | Description |
|---------|------|-------------|
| 70138021 | 2017-07-14 | CSA c/us report update for alternate construction (new models E02 & D02) on a Water management system, Models: W3Ta E01 b, W3Ta E02 with flow-through modules: W3Tc D01 / W3Tc D02 |
| 70095602 | 2016-10-19 | CSA c/us report update for alternate construction (relay) and model naming changed on a Water management system, Models: W3Txxxxxx-E01 / W3Txxxxxx-D01 |
| 70027582 | 2015-07-09 | CSA (c/us) certification of a pool management system for water treatment based on the acceptance of CB test report. |
